

Investment Objective

To achieve long-term capital growth from an actively managed portfolio made up primarily of securities issued by companies listed in China and Chinese companies listed elsewhere. The Company may also invest in listed companies with significant interests in China.

*Performance commencement date.

Key Risks

The value of investments can go down as well as up and you may not get back the amount invested. Overseas investments may be more volatile than established markets. The shares in the investment trust are listed on the London Stock Exchange and their price is affected by supply and demand. The investment trust can gain additional exposure to the market, known as gearing, potentially increasing volatility.

Portfolio Manager Commentary

Downside risks for China have increased amid a slowdown in activity indicators. China's zero-COVID-19 policy has suppressed consumption and Chinese equities have fallen over the last 12 months due to tough regulations targeting a raft of areas such as education, data privacy, cyber security, and anti-monopoly concerns, while default risk for some real estate stocks remain. However, China's recent accommodative measures, including a set of borrowing rate cuts, demonstrates its commitment to support the economy.

The technology sector in particular has been subject to greater regulation. However, we believe the worst is now behind and the focus will be on implementing those policies. The Chinese government has ambitious long-term goals for economic development, which will be difficult to achieve without a vibrant private sector and valuations for many such companies have moved to historical lows and look compelling vs their global peers.

Over the last few months, stocks in industries embroiled in regulatory changes, including 21vianet and software company iClick Interactive Asia, declined. US delisting fears have resulted in their recent widespread price drop. However, the holding in Pony.ai advanced amid its recent round of financing.

Over the 12 months to 30 June 2022, the Trust's NAV fell by -32.3%, underperforming its reference index, which delivered -22.4% over the same period. The Trust's share price fell -30.6% over the same period.

Full portfolio listings, with the appropriate time lag as agreed by the Board, are available on request from Fidelity Investment Trusts. Figures may not always sum to totals due to rounding

Approach and Style

The manager has a disciplined, bottom-up security selection approach. The fund seeks out investments in companies with good long-term prospects, cash generative businesses and companies controlled by strong management teams. Ideally these factors are not well understood by the market, and are therefore not reflected in valuations. The manager also focuses on smaller companies as these tend to be less well researched and, therefore, more mispriced. However, smaller companies tend to be higher risk, so risk management is key and meeting company management teams is essential in order to understand them and monitor their progress. On the long side, the manager looks for undervalued companies where returns are expected to go up over time.

Portfolio Construction – Explained

This factsheet contains information about the composition of the fund at a particular point in time. It aims to help you understand how the fund manager is positioned to achieve the fund's objectives.

The Equity Exposure table provides an overall view of the fund. Net Equity represents - in percentage terms - how much of the fund is invested in the market, netting off long and short positions. The higher the figure, the more the fund will take part in any market rises (or falls). It is important to note that Net Equity can be greater than 100% (for example if the manager is using derivative contracts) and when it is, the portfolio may be described as geared.

The exposure and positioning tables on page 2 break the fund down into a number of different views, each providing a different perspective on the fund's investments.

How data is calculated and presented

Portfolio composition data has been calculated and presented according to several general principles, which are listed below.

- **Aggregation:** all investments, including derivatives, linked to a particular issuing company have been combined to form a total percentage holding for each company. The aggregate holding is referred to in this factsheet as a position. Where a company is listed in two separate countries, each listing may be classified as a separate issuing company. Exchange Traded Funds (ETFs) and derivatives on ETFs are treated as individual securities - ie not aggregated.
- **Categorisation:** for investments that have underlying securities we use the attributes of the underlying issuing company or common share to determine the appropriate sector, market capitalisation band and geographic area.
- **Derivatives:** all derivatives are included on an exposure basis and, where necessary, are delta-adjusted. Delta-adjusting expresses derivatives in terms of the equivalent number of shares that would be needed to generate the same return.
- **"Basket" securities:** securities that represent a number of company shares - like index futures or options - are allocated to categories (such as country) whenever possible. Otherwise they are included in the "Other Index / Unclassified" category.

ESG Metrics

The factsheet is a snapshot of the portfolio at the date indicated above. ESG ratings distribution may vary over time. Representation of this data is for informational purposes only. If the SFDR classification is shown as 6 below then this fund does not promote environmental or social characteristics nor does it have a sustainable investment objective. If it is shown as 8, the fund promotes environmental or social characteristics. If it is shown as 9, the fund has a sustainable investment objective. Product-specific information can be found on our website at www.fidelityinternational.com

Sustainability Characteristics (30.06.2022)

| | Fund | Index |
|---|------|-------|
| MSCI ESG Fund Rating (AAA-CCC) | N/R | N/R |
| Weighted Average Carbon Intensity (tCo2e/\$M) | 87.5 | 251.6 |
| Carbon Footprint (tCO2/\$M Invested) | 68.3 | 257.1 |
| SFDR Classification | N/A | N/A |

N/A - Not Applicable
 N/R - Not Rated

MSCI Ratings Distribution % (30.06.2022)

Glossary

MSCI ESG Fund Rating: This shows the funds ESG rating based on the Quality Scores given to the fund by MSCI. This ranges from AAA, AA (Leader), A, BBB, BB (Average) to B, CCC (Laggard). To be included in MSCI ESG Fund Ratings, 65% of the fund's gross weight must come from covered securities, the fund's holdings date must be less than one year old and the fund must have at least ten securities.

Weighted Average Carbon Intensity: is calculated as the sum of each portfolio weight multiplied by the Co2e per \$M of Revenue of each holding. This metric provides a snapshot of the fund's exposure to carbon-intensive companies and includes scope 1 and scope 2 carbon emissions. For carbon data, the coverage of underlying securities must be over 50% for data to be shown.

Carbon Footprint: Provides a normalized snapshot of the funds contribution to carbon emissions.

SFDR Classification: Shows the classification given to each fund as part of the EU Sustainable Finance Disclosure Regulation (SFDR). Article 9 funds aim to achieve an ESG outcome and are products with ESG objectives. Article 8 funds focus on promoting ESG characteristics and this must be a primary focus of the product. Article 6 funds integrate sustainability risks into investment analysis and decision-making, without the funds promoting environmental or social characteristics or having sustainable investments as their objective.

MSCI Ratings Distribution: This shows the percentage distribution of ESG ratings in the fund, based on the Net Asset Value of holdings excluding cash, liquidity funds, derivatives and Exchange Traded Funds.

The information is as at the date of production based on carbon data provided by ISS. There may be timing differences between the date at which data is captured and reported.

SFDR Classification is assigned by Fidelity in line with the EU Sustainable Financial Disclosure Regulation.

Glossary / Additional Notes

Equity Exposure notes

GROSS MARKET EXPOSURE

Gross Market Exposure is the total of long exposures, plus the total of short exposures, and less the total of exposures hedging the portfolio, expressed as a percentage of shareholders' funds (Total Net Assets).

NET EQUITY

The net positive exposure to the market with short and hedge positions subtracted from long positions. OTHER

The value of any non-equity investments (excluding cash funds) expressed as a percentage of TNA.

UNINVESTED CASH

This is 100% minus the fund's Net Equity exposure and minus Other. This leaves any residual cash exposure that is not invested in shares or via derivatives.

Investment Trust Facts

NAV

The total value of a company's assets less the total value of its liabilities is its net asset value (NAV). For valuation purposes it is common to divide net assets by the number of shares in issue to give the net assets per share. NAV calculations can include or exclude current financial year income. For the purposes of this factsheet, they are valued with assets including income and costs and with debt valued at the market.

PREMIUM

If the share price of an investment company is higher than the net asset value (NAV) per share, the company is said to be trading at a premium. The premium is shown as a percentage of the NAV.

DISCOUNT

If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. The discount is shown as a percentage of the NAV.

GEARING

Gearing is the Market Exposure figure (either gross or net) expressed in excess of Total Net Assets. It represents the additional exposure to the market above Shareholders' Funds.

FAIR VALUE

The fair value of investments is initially taken to be their cost and is subsequently measured as follows: Listed investments are valued at bid prices, or last market prices, depending on the convention of the exchange on which they are listed; and

Unlisted investments are investments which are not quoted, or are not frequently traded, are stated at the Directors' best estimate of fair value and take account of the cost of the investment, recent arm's length transactions in the same or similar investments and financial performance of the investment since purchase.

General notes

TOTAL NET ASSETS (TNA)

The Company's total assets minus its total liabilities - also known as Shareholders' Funds. It represents the amount by which a company is financed through common and preferred shares.

INDEX

The index used in the positioning tables on page 2 is the index defined in the Performance Comparator section on page 1.

TOP NET LONG POSITIONS

Those companies in which the largest percentages of the trust's total net assets are effectively invested. Positions in other funds - including ETFs (Exchange Traded Funds) - can appear in this table, but index derivatives form part of an "Other Index / Unclassified" category which will not appear.

TOP OVERWEIGHT & UNDERWEIGHT POSITIONS

Those positions which have the largest active weight relative to the index. Positions in other funds - including ETFs (Exchange Traded Funds) - can appear in this table, but index derivatives form part of an "Other Index / Unclassified" category which will not appear. In the underweight table, any short position names have been withheld in line with Fidelity's disclosure policy.

NET LONG POSITIONS CONCENTRATION

Illustrates the weight of the top 10, 20 and 50 positions in the trust and the weight of the top 10, 20 and 50 positions in the index. It does not attempt to show the coincidence of security ownership between fund and index. The sector/industry classification used (i.e. GICS, ICB, TOPIX and IPD) varies by fund. Full descriptions can be found below.

Glossary / Additional Notes

ONGOING COSTS (KID)

These include Portfolio transaction costs (the costs of us buying and selling underlying investments) and Other ongoing costs (the costs that we take each year for managing the investment).

These are based on the methodology prescribed by EU Regulation (PRIIPS) and differ from other presentations of costs such as the Ongoing Charge Figure (OCF) in the Company's Annual Report & Accounts.

PORTFOLIO TRANSACTION COSTS

These are costs incurred when trading underlying investments.

SECTOR INDUSTRY CLASSIFICATION

GICS: Global Industry Classification Standard (GICS) was developed by Standard & Poor's and MSCI Barra. GICS consists of 11 sectors, 24 industry groups, 68 industries and 157 sub-industries.

More information is available at <http://www.standardandpoors.com/indices/gics/en/us>

ICB: The Industry Classification Benchmark (ICB) is an industry classification developed by Dow Jones and FTSE. It is used to segregate markets into sectors within the macroeconomy. The ICB uses a system of 10 industries, partitioned into 20 supersectors, which are further divided into 41 sectors, which then contain 114 subsectors.

More information is available at <http://www.icbenchmark.com/>
