## Share price performance (total return)

## Dividend history (pence/share)

In the 2008 financial year, five interim dividends were paid over a 15 month period totalling 9.65p. In the 18 month period to 30 April 2018, the payments comprised of two dividends totalling 2.5p from Henderson Diversified Income Limited and four interest distributions totalling 4.55p from Henderson Diversified Income Trust plc. Please note that the chart includes payments that have been declared but not yet paid.

**Please remember that past performance does not predict future returns. The value of an investment and the income from it can rise as well as fall as a result of market and currency fluctuations, and you may not get back the amount originally invested.**

Performance over (%)	10y	5y	3y	1y	6m

## Commentary at a glance

### Performance

The Company outperformed the Composite Benchmark during the month.

### Contributors/detractors

The fund returned 4.4% over the month and we saw positive contributions from both the high yield and investment grade holdings. Both US and European high yield bonds delivered the largest two-month rally since 2020 amid easing fears of rising inflation and limited supply. Investment grade bonds also performed well, supported by a decent rally in interest rates which was mostly real-yield driven as investors began to anticipate a more dovish path for rates.

### Outlook

In our view, the global economy appears to be weakening. It is challenging to determine whether we are headed for a soft landing or a hard landing however, because the path appears to be the same for both: that is, an inflation peak and a slowing of the job market. In the event of a hard landing, the profit cycle and the labour market would likely aggressively turn downwards. In the labour market, we have looked at household survey data, tax data, layoffs, hours worked and resignation data and we feel that a slowing or collapse is currently taking place. We are relatively fully invested in credit but seek to maintain a balanced portfolio of high yield and investment grade in order to manage these risks.

## Glossary

### Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

### Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can "gear" is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

### Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

### Market capitalisation

Month end closing mid-market share price multiplied by the number of shares outstanding at month end.

### NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

### NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

### Net asset value total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

### Net assets

Total assets minus any liabilities such as bank loans or creditors.

### Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

### Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

### Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

### Risk rating

The key measure used to assess risk is volatility of returns, using historic net asset value (NAV) performance of the company over 1 and 3 years. In this instance volatility measures how much a company's NAV fluctuates over time in relation to the UK Equity market. The higher a volatility figure, the more the NAV has fluctuated (both up and down) over time. Please note that risk categorisations are indicative and based principally on historic data and should not be solely relied upon when making investment decisions.

### Share price

Closing mid-market share price at month end.

### Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

### Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

### Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

## Source for fund ratings/awards

Overall Morningstar Rating™ is a measure of a fund's risk-adjusted return, relative to similar funds. Fund share classes are rated from 1 to 5 stars, with the best performers receiving 5 stars and the worst performers receiving a single star. Overall Morningstar Rating™ is shown for Janus Henderson share classes achieving a rating of 4 or 5. Ratings should not be taken as a recommendation. For more detailed information about Morningstar Ratings, including its methodology, please go to [global.morningstar.com/managerdisclosures](https://global.morningstar.com/managerdisclosures).

## Company specific risks

- This Company is suitable to be used as one component in several in a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested into this Company.
- Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- Higher yieldings bonds are issued by companies that may have greater difficulty in repaying their financial obligations. High yield bonds are not traded as frequently as government bonds and therefore may be more difficult to trade in distressed markets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio diversified across more countries.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result losses (or gains) may be higher or lower than those of the Company's assets.
- The Company may use gearing as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.
