Commentary at a glance

Contributors/detractors

China Hongqiao Group was the key positive contributor to performance. Taiwan Semiconductor Manufacturing Company was a key detractor.

Outlook

We are observing significant opportunities to accumulate quality companies that have been growing their earnings and increasing their dividends across many of our markets.

Fund Manager commentary

Investment environment

Asian equities fell in March given investor concerns about US economic growth and trade tariffs.

Chinese equities performed negatively in sterling terms, but rose in US dollar terms due to foreign exchange fluctuations. Sentiment towards China was bolstered by continued excitement about artificial intelligence (AI) and promises of further government stimulus. However, consumer price rises turned negative for the first time since early 2024, intensifying deflationary pressures. There was a sell-off in technology shares later in the month, amid waning investor enthusiasm and the threat of delisting from US stock exchanges, while worries about rising trade tensions with the US unsettled investors.

Indian equities rebounded strongly as investors took advantage of reduced share price valuations following months of declines, with the country's central bank increasing liquidity in the banking system in an effort to ease borrowing conditions and bolster the economy.

In Taiwan, equities slumped as US tariff threats and anxiety about the economic outlook rattled the market. South Korean stocks also declined, although some favourable economic news – retail sales rebounded in February and inflation slowed in the same month – provided some respite.

In Singapore, equities dropped in sterling terms and increased in US dollar terms, with the benchmark FTSE Straits Times Index hitting another record high given that it is considered more defensive amid the global volatility.

By sector, the information technology (IT) sector was the weakest, dragged down by weakness in Chinese and Taiwanese large-cap technology stocks, while materials performed the best in March.

Portfolio review

The holdings in Taiwan Semiconductor Manufacturing Company (TSMC) and Brilliance China Automotive detracted from performance. TSMC was a key detractor as investors continued to be nervous about elevated valuations in the technology sector following the release of low-cost AI models such as DeepSeek. Shares in Brilliance China weakened after its full-year earnings declined significantly.

Conversely, leading positive contributors were China Hongqiao Group and GAIL. Shares in aluminium producer Hongqiao rose after the company reported a significant improvement in its gross profit margin in its full-year results and announced a higher-than-expected dividend pay-out. The company has been improving shareholder returns through its extensive share buybacks and high dividend pay-out ratio. The share price of GAIL, India's largest natural gas distributor, rose after speculation that the company might benefit from the proposed changes to the natural gas pipeline tariff regulations by the Petroleum and Natural Gas Regulatory Board.

During the month, we initiated a new position in state-owned Industrial Bank of Korea. We find the bank attractive as its 'Value-Up Plan' has led to a progressive dividend policy. Elsewhere, we exited the position in China Resources Land following recent outperformance.

Manager outlook

While souring global trade relations and challenges faced by China have been dominating headlines, there are still numerous bright spots, with India, Indonesia, Taiwan and South Korea providing strong exposure to growth themes in the region. Companies in these countries are also demonstrating evidence of dividend growth. Areas such as Indonesian banks, firms exposed to South Korean corporate reform and Taiwanese technology firms are providing high and growing dividends. If the recent stimulus measures in China manage to spur industrial and consumption activity, we think this, along with interest rate cuts in 2025, may provide a boost to Asian markets.

The economic growth differential between Asia and the rest of the world remains wide and valuations continue to be attractive in our view. As a result, we are observing significant opportunities to accumulate quality companies that have been growing their earnings and increasing their dividends across many of our markets. The outlook for dividends in the region remains robust as positive free cash flow generation alongside the strength of balance sheets – with record cash being held by corporates – provides a strong backdrop across a number of sectors and markets across the region.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can "gear" is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Company specific risks

- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- The Company has significant exposure to Emerging Markets, which tend to be less stable than more established markets. These markets can be affected by local political and economic conditions as well as variances in the reliability of trading systems, buying and selling practices, and financial reporting standards.
- The portfolio allows the manager to use options for efficient portfolio management. Options can be volatile and may result in a capital loss.
- Where the Company invests in assets that are denominated in currencies other than the base currency, the currency exchange rate movements may cause the value of investments to fall as well as rise.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.
