## Commentary at a glance

## Performance

In the month under review the Company's NAV total return was -2.7% and the FTSE All-Share Index total return was -1.2%.

## Contributors/detractors (for the quarter)

Performance was helped by takeover offers during June. The fund's overweight position to small- and medium-sized companies and the holding in Serica Energy detracted.

## Outlook

The UK election could prove a 'clearing event' to lift some of the additional risk premium on UK equities. This would likely be more material for domestically-focused equities.

## Company overview

## Objective

The Company aims to give shareholders a higher than average return with growth of both capital and income over the medium to long-term, by investing in a broad spread of predominantly UK companies. The Company measures its performance against the FTSE All-Share Index Total Return.

## Highlights

A growth and income company with a diversified portfolio of mainly UK equities and a strong dividend track record.

## Company information

NAV (cum income)	142.3p

## Fund Manager commentary

### Investment environment

June was a weaker month for UK equities as political risk from the upcoming French election overshadowed European equities in general. We continue to see the political risk surrounding the UK election as comparatively low.

From an economic perspective, UK economic data was modestly positive. For example, UK retail sales rebounded in May while there was an upward revision to UK economic growth in the first quarter (showing that the UK economy has exited the shallow recession from the second half of last year).

Takeover activity continued in the UK market, with a confirmed offer from private equity for Alpha Financial Markets Consulting (which we hold in this portfolio), as well as bids for investment platform Hargreaves Lansdown and soft drinks producer Britvic (not held in this portfolio).

### Portfolio review

The best performers in June tended to be companies subject to takeover offers. These included DS Smith (which has agreed to a takeover by US listed International Paper) and Alpha Financial Markets Consulting. Shares in pensions consultant XPS Pensions also performed well after the company reported encouraging organic growth and margin expansion in its full-year results.

North Sea oil and gas producer Serica Energy was among the largest detractors from relative performance due to uncertainties surrounding the tax regime in the North Sea under a potential Labour government.

From a broader perspective, small- and medium-sized companies in the UK underperformed in June relative to large companies. This was a drag on relative fund performance given we hold comparatively more than its FTSE All-Share benchmark in small- and medium-sized companies.

In terms of portfolio activity, we took some profits in existing positions including M&S and some of our bank holdings such as NatWest. These were used to fund additions to positions in building materials company Ibstock, equipment hire company Speedy Hire and translation services provider RWS.

### Manager outlook

Since the Brexit vote, UK equities that are domestically focused have materially underperformed UK equities that predominantly receive their earnings from overseas. This could be seen as a higher 'risk premium' being put on the domestic earners as a result of political uncertainty. With the upcoming general election, we think we could start to see this additional 'risk premium' being gradually unwound in a stable UK political backdrop (and potentially with some favourable overseas comparisons relative to, for example, the French election). A gradual easing of this risk premium could provide a more favourable outlook for domestically-focused equities at a time when the UK economy is already showing signs of modest progress.

# Glossary

## Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

## Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

## Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

## Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

## Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

## NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

## NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

## NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

## Net assets

Total assets minus any liabilities such as bank loans or creditors.

## Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

## Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

## Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

## Risk rating

The key measure used to assess risk is volatility of returns, using historic net asset value (NAV) performance of the Company over 1 and 3 years. In this instance volatility measures how much a company's NAV fluctuates over time in relation to the UK Equity market. The higher a volatility figure, the more the NAV has fluctuated (both up and down) over time. Please note that risk categorisations are indicative and based principally on historic data and should not be solely relied upon when making investment decisions.

## Share price

Closing mid-market share price at month end.

## Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

## Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

## Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

## Source for fund ratings/awards

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

## Company specific risks

- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- Some of the investments in this portfolio are in smaller company shares. They may be more difficult to buy and sell, and their share prices may fluctuate more than those of larger companies.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
