Commentary at a glance

Performance

In the month under review the Company's NAV total return was -3.3% and the FTSE All-Share Index total return was -1.6%.

Contributors/detractors

Cyclical companies detracted given uncertainty surrounding the UK Budget and the US election. Conversely, some AIM shares showed some recovery, reflecting relief following clarification around inheritance tax (IHT) relief.

Outlook

The portfolio was trading on a lower valuation than the broader UK equity market (end of October), which we do not believe reflects the potential for future company earnings and dividend growth.

Company overview

Objective

The Company aims to give shareholders a higher than average return with growth of both capital and income over the medium to long-term, by investing in a broad spread of predominantly UK companies. The Company measures its performance against the FTSE All-Share Index Total Return.

Highlights

A growth and income company with a diversified portfolio of mainly UK equities and a strong dividend track record.

Fund Manager commentary

Investment environment

October was a volatile month for UK equities, with the overhang of the Budget causing continued speculation around which taxes might be increased. While it seemed clear which taxes would not rise (such as corporation tax), the market sought to 'fill the void' with conjecture around the continuation of inheritance tax relief on AIM Index shares, taxes around specific industries (such as gambling and North Sea oil) and changes to pension taxation.

This uncertainty was unhelpful and in our view was likely the primary driver of a decline in both business and consumer confidence. Combined with further uncertainty around the upcoming US election, this all resulted in a nervousness in the market which led to cyclical businesses (those typically more dependent on economic growth to do well, such as industrial goods producers) to generally underperform.

Portfolio review

A number of industrial holdings, such as Senior, Morgan Advanced Materials and IMI, underperformed. In the case of Senior (which supplies aerospace components), there was a stock-specific reason for the underperformance. This was the ongoing strikes and broader challenges at Boeing (one of Senior's largest customers) which are causing lower-than-expected demand. This in turn caused Senior to lower its earnings expectations for the full-year. For Morgan Advanced Materials and IMI, share price weakness was caused by broader concerns about a slowdown in economic growth.

In contrast, some of the best performers were holdings in companies listed on the AIM Index. These included Vertu Motors and FRP Advisory, where there was some relief after the Budget that inheritance tax relief (IHT) on the AIM Index was only halved (rather than removed in its entirety).

During the month we added to existing positions in auto components supplier Dowlais, pharmaceutical firm GSK, motor insurer Sabre Insurance, and medical device producer Smith & Nephew. In all cases, we felt the share prices were reflecting an overly-pessimistic outlook. These additions were funded by selling the position in XPS Pensions Group based on valuation grounds, as well as reducing the position in Marks & Spencer.

Manager outlook

Stepping back from the noise of the UK Budget and the US election, the portfolio was trading on under 10x historic earnings as at the end of October. This is lower than the UK equity market as a whole, which is itself trading at a discount to many overseas markets. The companies we invest in tend to be among the market leaders in their field, with what we see as a capacity to grow earnings over time. We expect this to drive longer-term dividend growth.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Company specific risks

- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- Some of the investments in this portfolio are in smaller company shares. They may be more difficult to buy and sell, and their share prices may fluctuate more than those of larger companies.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.

Not for onward distribution. Before investing in an investment trust referred to in this document, you should satisfy yourself as to its suitability and the risks involved, you may wish to consult a financial adviser. This is a marketing communication. Please refer to the AIFMD Disclosure document and Annual Report of the AIF before making any final investment decisions. Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested. Tax assumptions and reliefs depend upon an investor's particular circumstances and may change if those circumstances or the law change.
