Group Manufacturing Facilities

Taiwan HQ

Procurement, Sales & Marketing, R&D, Finance and Management

Sunrex Wujiang

Manufacture and shipping NB keyboard

Sunrex Chongqing

Services OEM customers in West China; Manufacture and shipping Touchpad, NB Keyboard and backlight

Sunrex ShenZhen

Manufacture and shipping NB keyboard, DT keyboard, Mouse and Stylus

Sunrex Changshu

Services OEM customers in East China; Manufacture and shipping NB keyboard and backlight

Sunrex JiangXi

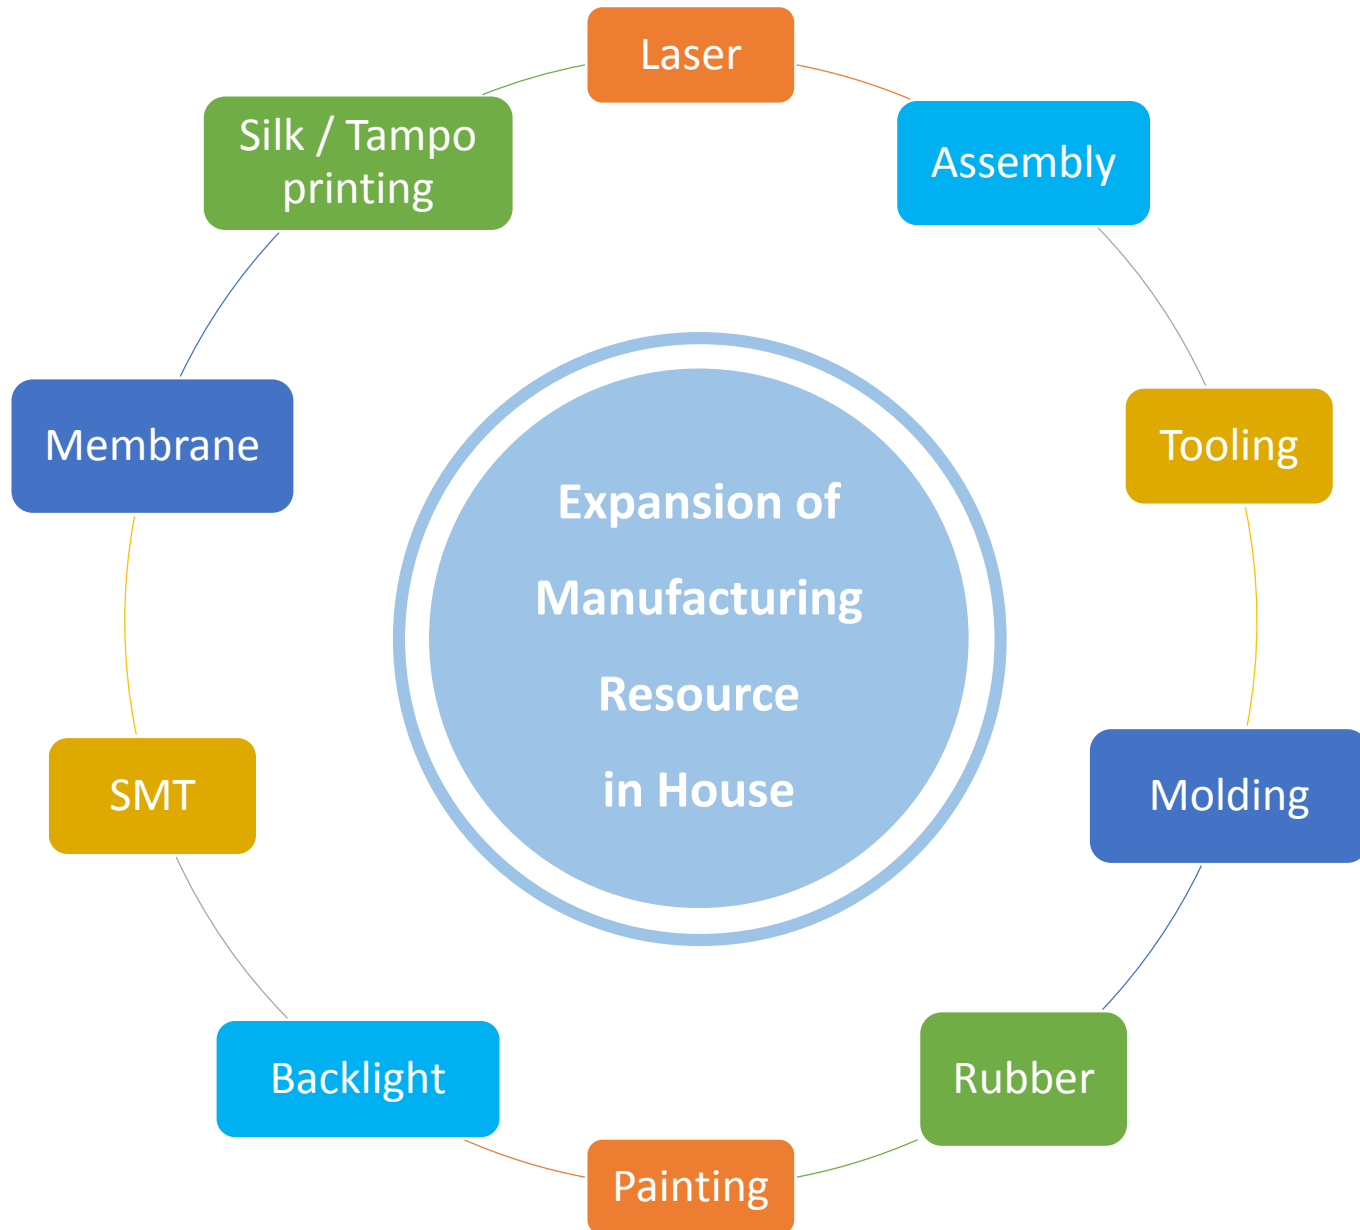

Services Sunrex group facilities and Chinese local customer; Manufacture and shipping key components

ODM/OEM Experience

Sunrex Competative Factors

All-in-One Vertical Integration

Sunrex Competative Factor

- 1 Sunrex supplies key components in our product, providing a complete solution to our customer
- 2 Consistent high yield and quality product
- 3 Experience and strong program management team
- 4 Cost efficiency solution for our customer
- 5 Product design powerhouse, provides 360deg. engineering service, making product that meets all customer requirement
- 6 Trustworthy security solution to protect customer's classified information

1 keyboard backlight module design and manufacturing

1. The backlight module workshop for American customers has been expanded and completed .
2. The new line body is matched with the automation equipment production capacity of key workstations. Strive for more order planning from customers.

2 Click Pad module design and manufacturing

Toward product design thinner (lighter and thinner, effectively reducing costs) and production automation planning.

2021 Revenue Recap

Sunrex 2021 Revenue Recap

Q1

Continuation of 2020 is affected by the coronavirus (COVID-19) epidemic factors.

Q2

Continuing the 2020 epidemic, benefiting from the business opportunities of remote office and remote teaching, the demand for NB continues to be strong.

Q3

In 2021, the NB market will be affected by factors such as shortage of materials, power restrictions, and rising prices of raw materials, which will affect the supply chain and profitability of NB components.

Q4

Looking forward to Q4, we will continue to pay attention to the new variant virus Omicron, which will affect the global NB demand and supply chain, and remain optimistic about the global notebook market demand.

Sunrex 2022 Outlook

1

After the epidemic, demand for laptop keyboards has gradually returned to normal.

2

The lack of jobs and rising wages in the mainland are still the biggest challenges for the industry. Automation of solid capital investment and reduction of manpower requirements will still be the largest category of investment in 2022. However, it will be significantly reduced compared to 2020 and 2021.

3

In the field of input devices, continued diversification is the main focus of product diversification, with keyboard backlight modules, touchpad modules and stylus pens being the main development focus.

4

In response to environmental protection requirements and ESG trends, the establishment of environmental protection processes will be the focus of 2022. At present, half of the factories have established water-based coating production lines to continue to deepen environmental protection processes.

5

Equipment investment for energy saving and carbon reduction continues to be an important project of solid capital investment.

Thank you for your attention
