NVIDIA vGPU Solution

NVIDIA Virtualized GPU (vGPU) software is installed along with the virtual machine monitor at the virtualization layer. This software creates virtual GPUs, allowing all virtual machines (VMs) to share the physical GPU installed on the server. Virtualization and cloud environments can also support high-performance engineering and authoring applications, as well as computationally intensive workloads such as artificial intelligence and data science.

NVIDIA Virtual Compute Server(vCS)

Power the most compute-intensive workloads with virtual GPUs

NVIDIA RTX Virtual Workstation (vWS)

Virtual Workstations for creative and technical professionals using graphics applications.

NVIDIA Virtual PC (vPC)

Virtual desktop infrastructure for knowledge workers who use office productivity applications and multimedia.

NVIDIA Virtual Applications (vApps)

Application streaming with Remote Desktop Session Host solutions.

A powerful and efficient "self-driving brain"

A new generation of centralized automotive computers achieves revolutionary AI computing performance of 1,000 trillion operations per second and a significant cost reduction.
