

Pantheon International Participations ("PIP") invests in a diversified portfolio of private equity assets managed by third party managers across the world.

Private equity funds purchase large equity stakes in private companies. This gives investors access to a broader universe of opportunities than that offered by public markets. Private equity managers are long-term, disciplined investors who can bring about beneficial changes to businesses and align shareholder interests with those of company management through majority ownership.

The Manager, Pantheon, is one of the world's foremost private equity specialists. With more than 30 years' experience, and a team of over 70 investment professionals globally, Pantheon is well positioned to guide PIP towards its objective of maximising capital growth.

Performance Summary

NAV and Share Price Performance

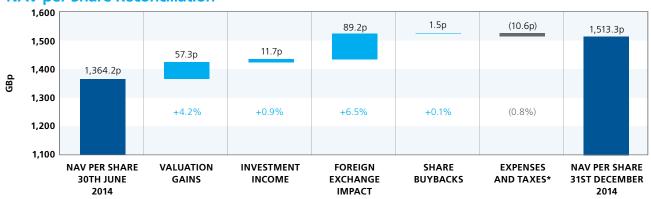

- NAV per share increased by 10.9%, from 1,364.2p to 1,513.3p.
- The ordinary share price increased from 1,150.0p to 1,266.5p, an increase of 10.1%. The discount increased slightly from 15.7% to 16.3%.
- The redeemable share price increased from 1,070.0p to 1,180.0p, an increase of 10.3%. The discount increased slightly from 21.6% to 22.0%.

Net Investment Cash Flow

- Distributions received in the six months to 31st December 2014 were £128.5m, equivalent to an annualised rate of 32% of opening private equity assets.
- PIP invested £85.5m in the six months to 31st December 2014 across calls (£15.7m), new investments (£66.2m), and share buybacks (£3.6m).
- Net investment cash flow in the half-year was £43.0m (£27.5m in the six months to 30th June 2014).

² Historical NAV and NAV per share figures disclosed in the table above relate to adjusted NAV and adjusted NAV per share where applicable.

Chairman's Statement

We are pleased to report NAV per share rose 10.9% to 1,513.3 pence during the half-year. This good result reflects positive progress in the value of the underlying portfolio of 5.1% (including income), boosted by positive foreign exchange movements stemming from the US dollar's gains against sterling. The share prices of the ordinary and redeemable shares mirrored these gains, each rising by 10% in the period.

The portfolio continued to generate significant realisations as market conditions remained supportive of exit activity, resulting in increased distributions to the Company.

Performance

During the half-year to 31st December 2014, the Company's NAV per share grew by 10.9%. This growth was driven by portfolio gains of 4.2%, investment income of 0.9% and share buybacks which added 0.1% to NAV per share. The reversal of sterling's gains versus the US dollar in the second half of 2014 led to positive foreign exchange effects in the period of 6.5% per share, reflecting the effect of a strengthening US dollar on PIP's portfolio, of which 56% is invested in funds operating mainly in the USA. Expenses and taxes in the period reduced NAV per share by 0.8%.

Sample EBITDA and revenue growth amongst underlying portfolio companies, representing approximately 48% by value of the buyout portfolio, was 9.8% and 8.5% respectively in the 12 months to 30th June 2014. Our portfolio weighting emphasises the consumer, IT, healthcare and industrial sectors. These sectors provide ample opportunity for private equity managers, investing often in the mid-market, to acquire companies with higher growth characteristics relative to the broader equity markets due to their market positioning and scale. Our relentless focus on investing with high quality managers globally, often with specialist knowledge of the sectors in which they are investing, helps to ensure that our portfolio is exposed to these growth opportunities through disciplined ownership practices that drive operational and capital efficiencies.

Share Buybacks

In the half-year to 31st December 2014, the Company invested £3.6m to buy back and cancel 125,000 ordinary shares and 200,000 redeemable shares, resulting in an uplift to NAV per share of 1.5p, or 0.1% of PIP's NAV per share. PIP began buying back shares in August 2011 and so far has invested £80m in buying back 13% of the Company's shares. The discounts at which the Company's shares trade from time to time may make buybacks an attractive investment opportunity relative to other potential new investment commitments.

Investment Activity

The portfolio benefited in the period from significant distributions, including from a number of IPOs that had listed during the first half of 2014. The Company received distributions of £129m during the half-year, equivalent to an annualised rate of 32% of opening portfolio assets. Calls from underlying private equity funds were £16m, or approximately 18% of opening undrawn commitments on an annualised basis. This resulted in a net portfolio cash flow prior to new investment commitments of £113m during the period. PIP's portfolio is mature, with a weighted average fund age of 7.9 years. If conditions remain supportive, this maturity should lead to continued positive net cash flows.

A sample of PIP's largest 50 distributions during the half-year had an average uplift of 27% to their previous holding value. This tendency for exits to occur at an uplift can add to performance.

The portfolio continued to generate significant realisations as market conditions remained supportive of exit activity

New Investments

Demand for assets remains high, with markets consequently appearing to be fully priced. The Company's flexible investment strategy has enabled it to seek out assets which demonstrate relative value. During the half-year, PIP made 19 new commitments amounting to £132m, comprising £72m in seven secondaries, £16m in six co-investments and £44m in six primaries.

Our secondary purchases were mainly in US and European buyout funds, typically in more concentrated portfolios involving single fund interests where portfolio prospects could be more fully evaluated. Our Manager's investment emphasis continues to target high quality funds with identifiable near term liquidity prospects, exploiting information often gained from prior investments. Moreover, in line with current strategy, the Company has made six carefully selected primary commitments, mostly in mid-market funds that are oversubscribed and where such fund interests are thought less likely to be readily available in the secondary market.

Since 31st December 2014, the Company has committed a further £30m: £14m to two secondaries, £7m to two co-investments and £9m to two primary funds.

Balance Sheet

In November, the Company renewed its credit facility with improved terms and a revised maturity date of November 2018. The size of the new loan facility remains unchanged at \$100m and €46m, which was equivalent to £100m as at 31st December 2014. The facility was undrawn as at this date. Given the average maturity of PIP's funds, we expect the private equity portfolio to generate net cash for investments. Our positive net cash flows and ungeared balance sheet allow us to renew the portfolio on an ongoing basis with a view to achieving some consistency in deployment, ideally over a 4-5 year period.

At 31st December 2014, the Company held cash of £123m, which together with the credit facility gave it total liquid resources of £223m.

The Company's flexible investment strategy has enabled the Company to seek out assets which demonstrate relative value

Outlook

The Company's strategy continues to emphasise opportunities in the secondary market. While pricing of assets in the secondary market has moved in sympathy with rising prices in all asset markets, our relationships with more than 100 selected private equity managers globally positions us to be able to buy assets on the secondary market when portfolios look to be at a favourable point in their value development. This approach provides the Company with access to assets selected for their high quality that are nearer to being realised. Should these market conditions continue, purchasing assets in the secondary market with an emphasis on their ripeness for sale enables the Company to continue to benefit from these unusually buoyant equity markets. Selective co-investment in opportunities where the price can be clearly justified by the opportunity for value growth, together with targeted primary commitments to funds managed in all regions by some of the world's best private equity managers, allows the Company to continue to renew its portfolio while maintaining a conservative approach to balance sheet management.

Board Changes

Following Peter Readman's retirement from the Board at the Annual General Meeting, I am pleased to announce the appointment of David Melvin as a Director with effect from 23rd February 2015. David's private equity experience has been acquired over many years as a capital markets practitioner, providing a set of perspectives that will complement those of the other Board members. David was a Partner and Head of Investor Relations for TDR Capital LLP and was formerly Global Co-Head of Financial Sponsors at Merrill Lynch.

MH Butter

TOM BARTLAM

Chairman

Objective and Investment Policy

Investment Objective

The Company's primary investment objective is to maximise capital growth by investing in a diversified portfolio of private equity funds and directly in private companies.

Investment Policy

The Company's policy is to make unquoted investments, in general by subscribing for investments in new private equity funds ("Primary Investment") and by buying secondary interests in existing private equity funds ("Secondary Investment"), and from time to time to capitalise further on its fund investment activities by acquiring direct holdings in unquoted companies ("Co-investments"), usually either where a vendor is seeking to sell a combined portfolio of fund interests and direct holdings or where there is a private equity manager, well known to the Company's Manager, investing on substantially the same terms.

The Company may invest in private equity funds which are quoted. In addition, the Company may from time to time hold quoted investments in consequence of such investments being distributed to the Company from its fund investments or in consequence of an investment in an unquoted company becoming quoted. The Company will not otherwise normally invest in quoted securities, although it reserves the right to do so should this be deemed to be in its interests.

The Company may invest in any type of financial instrument, including equity and non-equity shares, debt securities, subscription and conversion rights and options in relation to such shares and securities and interests in partnerships and limited partnerships and other forms of collective investment scheme. Investments in funds and companies may be made either directly or indirectly, through one or more holding, special purpose or investment vehicles in which one or more co-investors may also have an interest.

The Company employs a policy of over-commitment. This means that the Company may commit more than its available uninvested assets to investments in private equity funds on the basis that such commitments can be met from anticipated future cash flows to the Company and through the use of borrowings and capital raisings where necessary.

The Company's policy is to adopt a global investment approach. The Company's strategy is to mitigate investment risk through diversification of its underlying portfolio by geography, sector and investment stage. Since the Company's assets are invested globally on the basis, primarily, of the merits of individual investment opportunities, the Company does not adopt maximum or minimum exposures to specific geographic regions, industry sectors or the investment stage of underlying investments.

In addition, the Company adopts the following limitations for the purpose of diversifying investment risk:

- that no holding in a company will represent more than 15% by value of the Company's investments at the time of investment (in accordance with the requirement for approval as an investment trust which applied to the Company in relation to its accounting periods ended on and before 30th June 2012);
- the aggregate of all the amounts invested by the Company in (including commitments to or in respect of) funds managed by a single management group may not, in consequence of any such investment being made, form more than 20% of the aggregate of the most recently determined gross asset value of the Company and the Company's aggregate outstanding commitments in respect of investments at the time such investment is made;
- the Company will invest no more than 15% of its total assets in other UK-listed closed-ended investment funds (including UK-listed investment trusts).

The Company may invest in funds and other vehicles established and managed or advised by Pantheon or any Pantheon affiliate. In determining the diversification of its portfolio and applying the manager diversification requirement referred to above, the Company looks through vehicles established and managed or advised by Pantheon or any Pantheon affiliate.

The Company may enter into derivatives transactions for the purposes of efficient portfolio management and hedging (for example, hedging interest rate, currency or market exposures).

Surplus cash of the Company may be invested in fixed interest securities, bank deposits or other similar securities.

The Company may borrow to make investments and typically uses its borrowing facilities to manage its cash flows flexibly, enabling the Company to make investments as and when suitable opportunities arise and to meet calls in relation to existing investments without having to retain significant cash balances for such purposes. Under the Company's articles of association, the Company's borrowings may not at any time exceed 100% of the Company's net asset value. Typically, the Company does not expect its gearing to exceed 30% of gross assets. However, gearing may exceed this in the event that, for example, the Company's pipeline of future cash flows alters.

The Company may invest in private equity funds, unquoted companies or special purpose or investment holding vehicles which are geared by loan facilities that rank ahead of the Company's investment. The Company does not adopt restrictions on the extent to which it is exposed to gearing in funds or companies in which it invests.

Manager's Review

Market Review

Economic stimulus is nothing without structural reform. Nor, for that matter, is swingeing austerity. Just when most of the world appeared to be recovering from the economic ills of the past six years, symptoms have returned to many markets that indicate that the medicine administered has proven unsuccessful as the widespread cure.

Europe, having turned a corner, is slipping into recession once more. Deflation across the Eurozone is a threat, and indeed already a reality in some markets¹. The UK, which emerged strongly from the downturn, may not be able to escape the pull backwards. Meanwhile, Japan has slipped into recession once more, with its fifth technical recession since 2002 deeper than at first thought². At the end of 2014, the Bank of Japan signalled its intention to lift its bond buying program to unprecedented levels, while the European Central Bank in January announced plans to buy €60bn a month of sovereign debt and other assets until September 2016 in the hope of rekindling growth. So, just as one large central bank – the US Federal Reserve – seems to be turning off the printing presses, two other central banks appear ready to flood markets with masses of liquidity.

The problem of slow growth is most acute in those two markets, but not confined to them. A large part of the world is now faced with the symptoms of what economists call "secular stagnation" — a long-term reduction in the potential growth rates of developed economies. Meanwhile, large emerging markets, including China and India, have stronger growth but seem unlikely to recapture the heady double-digit or high single-digit rates registered just a couple of years ago. The prospect of anaemic growth leaves policymakers around the world grappling with ways to stimulate their economies, create jobs and increase prosperity for their citizens.

As investors, we have to find ways to generate returns against a backdrop of persistent uncertainty and volatility. In the face of slower growth and stagnation, investors' fundamental quest for yield has fuelled the credit markets. Treasury yields flirt with record lows and high-yield credit can prove to be anything but. While, of course, a lower cost of credit is helpful to private equity managers in reducing the cost of capital for portfolio companies, it also has the effect of pushing up asset prices. As such, private equity is not immune to downward pressure on returns, but private equity managers can be more active in order to create value, including making judicious use of the credit markets as well as financing growth in businesses with clear opportunities to increase operating efficiency and/or market penetration.

Amidst the uncertainty, bright spots remain on the horizon. In the US, growth is on an upward trajectory, joblessness has fallen, consumer spending and business investment are growing, and inflation – pushed down in part by low oil prices – is picking up and wages are responding³. Normal economic progress, though not boundless growth, is returning. The US experience of quantitative easing shows that such measures can work, but only when allied with financial and structural reform. Certain emerging markets are also showing strong signs of continued growth and undervaluation from a private equity perspective. And globally, oil prices – which at the time of writing have slipped to below \$60 a barrel⁴ – can provide a fillip for growth, particularly in those countries reliant on oil imports for their manufacturing output.

Contrast the situation in the US with that in Western Europe and Japan – economies where last year we observed encouraging signs of growth⁵. As we enter 2015, both are tipping backwards as deflation and recession take hold once more. The result is that as one massive monetary program comes to a close, two new packages are ready to take its place.

Europe and Japan Quantitative Easing Looms

In Europe, a brief honeymoon of improving economic growth has been replaced with a deteriorating outlook. The European Union registered GDP growth of just 0.3% in the third quarter, with its largest actor Germany having effectively ground to a halt since the end of March⁶. ECB President Mario Draghi's planned €1 trillion quantitative easing stands ready to administer emergency liquidity⁷. Yet, without long-term reform, the benefit is likely to be short-lived. The politics of inequality is trumping much of Europe's political commitment for reforming labour markets, cleaning out its banking problems, and dealing with an inconsistent Stability and Growth Pact, which is driving the continent into deflation.

Market Review

(CONTINUED)

In Japan, structural market reforms, one of Shinzo Abe's "three arrows" of expansionist policies, have been disappointingly slow in coming. It remains to be seen whether the renewed mandate of his government can deliver on this elusive goal.

While the quantitative easing that is expected in both these markets is likely to be helpful for equity markets in the short term, private equity investors, as long term investors, will need to be particularly careful to invest in areas of the market that are better defended against these largely deflationary effects.

best run since 20089 with record levels of dry powder increasing competition for assets. We expect that run to continue in 2015 as the European Central Bank and the Bank of Japan take on the mantle of providers of liquidity of last resort to the global economy. High valuations and high levels of market liquidity, which increases the risk of overpaying when deploying capital in new investments, provides a welcome boost to sellers of assets and consequently the market as a whole, as well as PIP's own portfolio, has seen increasing levels of distributions from funds as assets are realised in this favourable environment.

Emerging Markets Attractive Despite Headwinds

Long-term slowing growth extends to large emerging markets, presenting challenges for their respective administrations. Additional political volatility creates a backdrop of uncertainty for investors, despite the potential long-term attractive characteristics as these economies grow.

China's growth has come off its peak, and while much has been made of attempts to increase the pace of growth, the OECD is predicting that GDP expansion will dip below 7% in 2016, while OECD member growth increases to 3%8. Addressing wasteful investment will help, but China's transition to a domestically-driven consumption economy will inevitably mean slower-paced growth in the long run.

Despite the prevailing macroeconomic and political headwinds, there will be opportunities to invest in companies whose prospects for growth can be transformed by the economic development within many emerging markets. Experienced private equity managers, used to the greater volatility of equity prices typical in these markets, use their understanding of the longer term prospects for certain businesses to create buying opportunities.

Widespread Asset Price Inflation

One of the hazardous consequences of quantitative easing is the widespread asset price inflation witnessed globally. Stock markets are above where they stood before the crisis, while bond yields are at some of their lowest levels. Private equity has not been immune. Public market comparables set a high benchmark for valuations, while cheap loans and high-yield bonds enable sponsors to stretch prices further. Furthermore, fundraising has been enjoying its

Active Investment Provides Opportunity for Success

The macroeconomic environment and socio-political backdrop are important factors which influence Pantheon's strategic view on certain investment markets. For instance, we remain positively inclined to the US given improving fundamentals. Meanwhile, our view on Europe is marginally more bearish because of the strengthening economic headwinds. However, slavish adherence to such broad views would overlook beneficial undercurrents and opportunities in any individual market. In the face of low growth and high asset prices globally, a more fundamental view on investment and value creation is needed. The discipline of investors and the value-adding operational skill of private equity managers have always been important, but now they are critical. Expanding valuation multiples and cheap leverage cannot be relied upon to lift returns in these markets.

Secondary Market Review

Secondary transaction volume reached another record level in 2014 with \$38.5bn¹0 transacted, significantly surpassing the 2013 level of \$24.5bn¹0. The growth reflected a favourable pricing environment for sellers of secondary interests in funds enjoying helpful exit market conditions. Consequently, in addition to the expected sellers, we saw many institutions making opportunistic use of the secondary market to reduce exposure to non-core managers.

Pricing in the market has been robust, with an average high bid of 95%¹¹ of NAV throughout the year. Discounts to NAV stabilised in the second half of 2014 following contraction in the first half, as buyers' expectations of further valuation write-ups have reduced¹¹.

- ⁸ Source: OECD, China Economic Forecast Summary, November 2014.
- ⁹ Source: Preqin, October 2014. Funds raised totalled \$320 billion in the first three quarters of 2014, and dry powder stood at \$1.2 trillion.
- ¹⁰ Secondary deal volume excludes real estate transactions. Source: Cogent Partners Secondary Market Update, January 2015.
- ¹¹ Cogent Partners Secondary Market Update, January 2015.

Underpinning the high transaction volume levels were a record number of deals above \$1bn¹¹, as sellers increased concentration in their portfolios, and continued to shift their strategy focus (e.g. from large buyout to mid-market).

As a reflection of this, pension funds were the most active sellers during the year, accounting for 28%¹² of all sellers. Despite having been active sellers for some time now, banks continue to remain one of the most active at 25%¹².

Pantheon has screened over \$50bn of deals, committing to nine transactions during the year, targeting more concentrated transactions involving fund interests with identifiable value drivers; these typically comprise a number of investments with strong growth prospects or where potential liquidity events give rise to significant upside relative to current holding valuations.

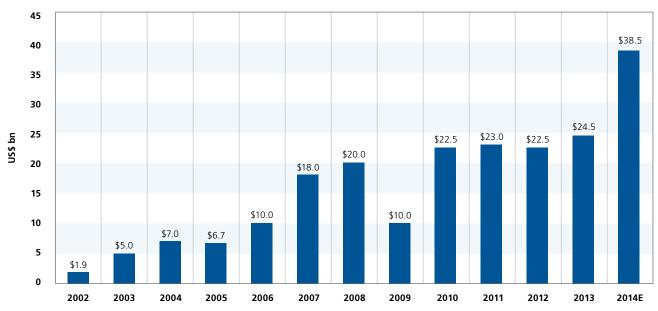

The most active sellers in the market are expected to provide significant secondary deal flow in 2015. Despite the Federal Reserve Board's announcement in December 2014 of a deadline extension for banks' compliance with the Volcker Rule to at least

July 2016, banks are expected to engage in further selling activity this year. Moreover, pension funds are expected to look to take advantage of a more active secondary market to concentrate their resources on fewer fund relationships. These trends, along with a recovering US economy and further volatility in Europe is likely to mean another active year for secondary deal flow in 2015.

Private Equity Outlook

While we see high prices and fierce competition for assets in many markets, we do believe there are broad themes shaping consumption trends globally, including developments in technology and in large emerging markets. These are enduring investment themes which private equity can tap into and ultimately profit from. Among these we see demand for new energy sources, resurgent US manufacturing and the ageing global populations as driving forces for our investment markets.

Portfolio Overview

(CONTINUED)

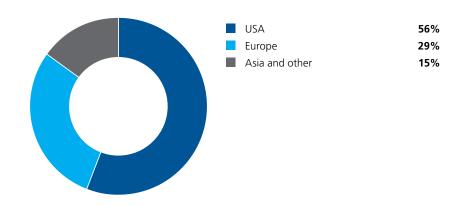

The Company offers a global, diversified selection of private equity assets, carefully selected by Pantheon for their quality. The diversification of PIP's portfolio, with assets spread across different investment styles and stages, including buyout, venture and growth, and special situations, helps to reduce volatility both of returns and cash flows. The maturity profile of the portfolio ensures that PIP is not overly exposed to any one vintage. PIP's geographical diversification extends its exposure beyond the US and Europe, to regions with higher rates of economic growth such as Asia.

Portfolio Analysis by Value as at 31st December 2014¹

Fund Geography

The majority of PIP's geographical exposure is focused on the US and Europe, reflecting the fact that these regions have the most developed private equity markets.

Portfolio assets based in Asia and other regions provide access to faster-growing economies.

Fund Stage

PIP's portfolio is well diversified across different private equity investment styles and stages.

The majority of the portfolio is made up of buyout funds.

Exposure to co-investments increased to 8% (from 7%) during the half-year, due to new investments.

Pantheon Vehicles

At 31st December 2014, 6% of PIP's portfolio value and 5% of PIP's outstanding commitments were comprised of funds-of-funds directly managed by Pantheon. Pantheon is not entitled to management and commitment fees in respect of PIP's holdings in, and outstanding commitments to, the firm's managed fund-

of-funds vehicles. In addition, Pantheon has agreed that PIP will never be disadvantaged in terms of fees compared with the position it would have been in had it made investments directly into the underlying funds rather than indirectly through such fund-of-funds vehicles.

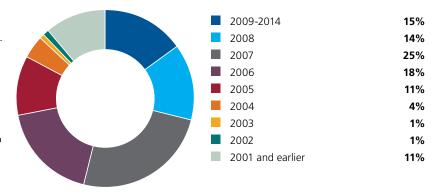

¹ Fund geography, stage, maturity and primary/secondary charts are based upon underlying fund valuations and account for 100% of PIP's overall portfolio value.

Company sector and company geography charts are based upon underlying company valuations at 30th June 2014 and account for approximately 90% of PIP's overall portfolio value.

Fund Maturity

The portfolio is well diversified by fund vintage. PIP's secondary activity is expected to lead to continued exposure to the high fundraising years of 2006-2008.

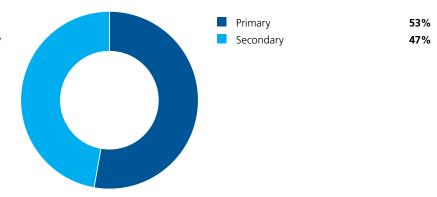

In addition, new primary commitments and co-investments are increasing PIP's exposure to more recent vintages, with the 2009 and later segment of the portfolio increasing to 15% (from 11%) during the half-year.

Primary/Secondary

53% of the portfolio is derived from primary commitments.

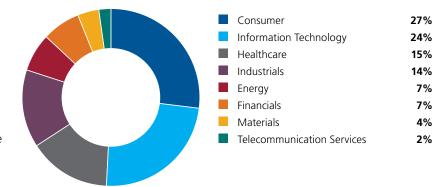

However, PIP's secondary emphasis has increased the secondary exposure of the portfolio to 47%, up from 44% as at 30th June 2014.

Company Sectors

PIP's sectoral exposure diversifies the effects of cyclical trends within particular industry segments.

Relative to the FTSE All-Share and MSCI World indices, PIP has greater exposure to information technology, and lower exposure to the banking, mining and utilities sectors.

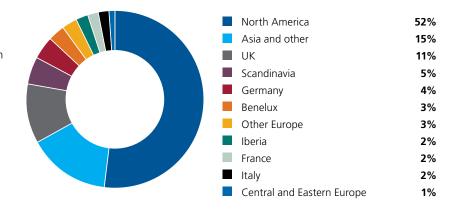

Company Geography

Over half of the portfolio is with companies based in North America, which benefit from greater capital market scope and depth.

PIP's European exposure, which represents a third of the portfolio, is predominantly in companies based in the stronger Northern European economies, including the UK, Scandinavia and Germany.

15% of PIP's portfolio is based in Asia and other regions, providing access to faster growing economies such as China and India.

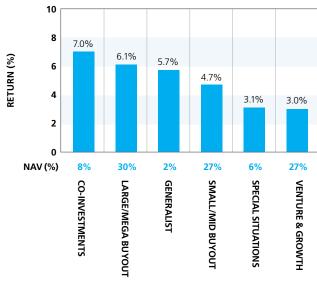

Portfolio Analysis

Portfolio Performance by Stage for the Half-Year to 31st December 2014¹

- > The portfolio generated investment returns of 5.1% during the half-year prior to foreign exchange effects.
- > Large buyouts dominated performance during the period.

Portfolio Return: Half-Year to 31st December 2014

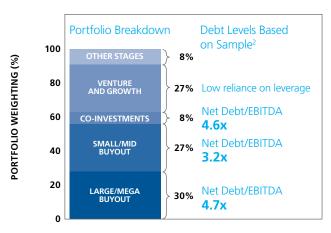

Debt Multiples²

Venture and growth and buyout investments have differing leverage characteristics.

- The venture and growth portfolio accounts for 27% of portfolio value and has little or no reliance on leverage.
- In a market associated with high leverage transactions, debt multiples on PIP's underlying companies have remained within reasonable levels at less than five times EBITDA.

PIP Portfolio at 30th June 2014

Portfolio Analysis – Buyout

Valuation Multiple²

- Accounting standards require private equity managers to value their portfolio at fair value. Public market movements can be reflected in valuations.
- Sample-weighted average enterprise value/EBITDA for the year to 30th June 2014 was 9.7 times, compared to 8.4 times and 10.4 times for the FTSE All-Share and MSCI World indices.

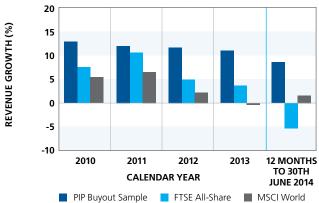

Valuation Multiple at 30th June 2014

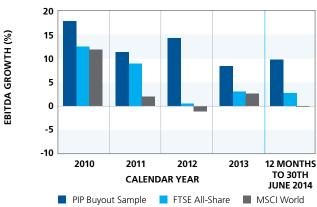

Revenue and EBITDA Growth²

- Weighted average revenue growth for the sample buyout companies was +8.5% in the 12 months to 30th June 2014, compared to -5.3% and +1.6% for the FTSE All-Share and MSCI World indices.
- ➤ Weighted average EBITDA growth for the sample buyout companies was +9.8% in the 12 months to 30th June 2014, compared to +2.8% and -0.1% for the FTSE All-Share and MSCI World indices.
- Strong top-line performance and cost control is a principal objective of private equity managers.

Annual Revenue Growth: PIP Sample vs Indices

Annual EBITDA Growth: PIP Sample vs Indices

¹ Portfolio stage returns include income, exclude gains and losses from foreign exchange movements, and look through feeders and funds-of-funds to the underlying funds.

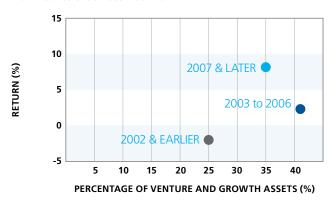

² The data is based on a sample of PIP's buyout funds. **Buyout Sample Methodology:** The sample buyout figures for the 12 months to 30th June 2014 were calculated from the companies, where information was available. The figures are based on unaudited data. The revenue and EBITDA figures were based upon the last 12 months to 30th June 2014 or, where not available, the closest annual period disclosed, and provide coverage of 48% (for both revenue and EBITDA growth) of PIP's buyout portfolio. Individual company revenue and EBITDA growth figures were capped between +100% and –100% to avoid large distortions from excessive outliers. Sample data for 2009–2013 is based on the same methodology and provides coverage of 50-75% of the portfolio in each year. Enterprise value is defined as carrying value + net debt. The net debt and enterprise value figures were based upon 30th June 2014 underlying valuations, or the closest period end disclosed. The valuation multiple sample covers approximately 56% of PIP's buyout portfolio. The debt multiple sample covers 61% of PIP's buyout portfolio and 51% of PIP's co-investment portfolio. Data sourced from Bloomberg.

Portfolio Analysis – Venture and Growth

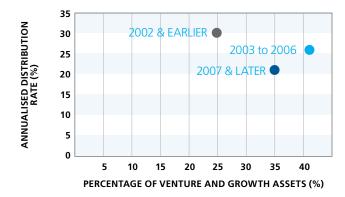

Venture and Growth Portfolio Analysis

- > Prior to foreign exchange effects, PIP's venture and growth funds generated a return of 3.0% in the six months to 31st December 2014.
- Although vintage 2002 and earlier generated negative returns during the six month period, we continue to see significant distributions from these vintages.
- 2007 and later funds performed strongly, with half-year returns of 8.1%. These funds constitute 35% of the venture and growth portfolio.
- > 2003 to 2006 funds constitute 41% of the venture and growth portfolio and in our view, can continue to produce a substantial level of distributions.

Venture and Growth Returns¹: Half-Year to 31st December 2014

Venture and Growth Distributions²: Half-Year to 31st December 2014

¹ Returns exclude gains from foreign exchange movements.

² Distribution rate equals distributions in period divided by opening portfolio value.

3%

Distributions in the Half-Year to 31st December 2014

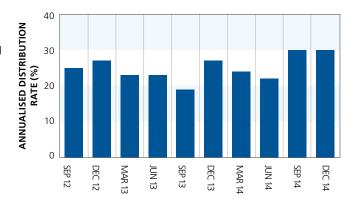

PIP received more than 900¹ distributions in the half-year, with many at significant uplifts to carrying value. Given the current robust exit environment, the Company's mature portfolio should continue to generate significant distributions in the coming quarters.

Distributions **Distributions by Region and Stage** PIP received £129m in proceeds from the portfolio in the six months to 31st December 2014, implying an annualised distribution rate equivalent to 32% of opening private DISTRIBUTIONS DISTRIBUTIONS equity assets. BY REGION **BY STAGE** = £129m = £129m The US accounted for the majority of PIP's distributions, where market conditions supported a good level of exits among larger buyouts. USA 49% Large/Mega Buyout 39% Despite economic headwinds, European Europe 36% Small/Mid Buyout 31% distributions were at least as strong. Asia and other 15% Venture and Growth 21% Co-investments 2% Special Situations

Distribution Rates

Quarterly Distribution Rate²

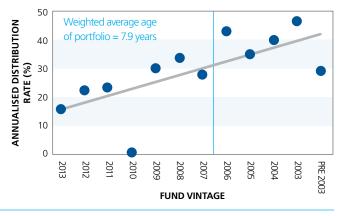

Quarterly distribution rates continue to remain strong, increasing to 30% over the last two quarters on an annualised basis. This reflects a continued improvement in market conditions, the maturity of PIP's portfolio and seasonal increases in deal activity.

Generalist

Distribution Rates² in the Half-Year to 31st December 2014 by Vintage

Mature vintages continue to distribute at higher rates, with 2009 and earlier funds distributing at a rate in excess of 30%. With a weighted fund maturity of 7.9 years, PIP's mature portfolio should continue to generate significant levels of cash, particularly if we see sustained improvements in the financial markets.

¹ This figure looks through feeders and funds-of-funds. 2 Distribution rate equals distributions in period divided by opening portfolio value.

Acosta Case Study

Location	Florida, USA
Sector	Consumer
Sub-Sector	Advertising
Stage	Large buyout
PIP Distribution / GP Return	£1.8m / 3.4x

Company Summary

Acosta is a US-based sales and marketing agency, providing outsourced sales, marketing and merchandising services to manufacturers, suppliers and producers of consumer packaged goods ("CPG"). The company represents the majority of #1 and #2 brands in the CPG industry. Clients include Pepsi, Nestle, Kraft and Procter & Gamble.

GP Investment & Thesis

Thomas H. Lee Partners ("THL") acquired Acosta in March 2011.

- Sourcing advantage through deep sector knowledge and having previously targeted the company
- Organic growth opportunity driven by outsourcing of sales and marketing activities
- Management led by a highly experienced CEO who was well known to THL

PIP Investment & Thesis

PIP invested as part of a secondary transaction in Thomas H. Lee Fund VI in January 2014.

- Attractive sector with favourable tailwinds and opportunities for outsourcing
- Diversification of the strategy during THL's ownership was promising and expected to drive growth
- Moderated risk due to strong historical performance and relatively conservative GP exit assumptions

Value Creation

- Operational transformation driven by THL's Strategic Resources Group who worked with management to generate cost savings by outsourcing back-office functions, optimising the deployment of resources and streamlining the management supervisory structure
- Acquisitions of 33 businesses led to double-digit revenue growth and pivoted the business mix to faster growing services and channels
- Team build-out as the company grew, adding outside executives and simplifying decision-making

Exit

- THL sold Acosta to Carlyle in July 2014, generating a return of 3.4x invested capital
- PIP received distributions of £1.8m in September 2014

WILD Flavors Case Study

Location	Germany
Sector	Consumer
Sub-Sector	Packaged Foods and Meats
Stage	Large buyout
PIP Distribution / GP Return	£2.0m/3.4x

Company Summary

WILD Flavors develops and produces natural ingredients, flavours, and colours for the food and beverage industry worldwide. It serves consumer packaged goods companies, foodservice manufacturers and distributors, and private label manufacturers, as well as start-up corporations. WILD's primary expertise is in ingredients, particularly flavours, for the soft drinks industry.

GP Investment & Thesis

KKR invested \$236m into the company in June 2010, acquiring a 35% stake at €1.0bn enterprise value.

- Leading global market share in natural flavours for beverages and a strong footprint in Europe and the US
- Secular trends such as increasing consumption of beverages per capita and a greater focus on health underpinned organic growth
- > Barriers to entry given differentiated R&D capabilities

PIP Investment & Thesis

PIP invested as part of a secondary transaction in KKR Europe III in July 2014.

- Growth fuelled by expansion into emerging markets, which was expected to continue over the hold period
- Upside potential represented by operational initiatives and integration of regional businesses
- Attractive financial profile given EBITDA growth, low leverage and margin improvement potential

Value Creation

- **Globalisation** of business, in particular expansion into emerging markets, accelerated organic growth
- Acquisitions expanded local manufacturing capabilities and added established customer bases
- Operational initiatives such as optimisation of sourcing, LEAN manufacturing and sales effectiveness

Exit

- KKR sold its stake to ADM in October 2014 for a return of 3.4x invested capital (USD) and 31% IRR
- > PIP received £2.0m in proceeds in October 2014

Zoë's Kitchen Case Study

 Location
 Texas, USA

 Sector
 Consumer

 Sub-Sector
 Restaurants

 Stage
 Medium buyout

 PIP Distribution / GP Return
 £4.5m / 7.5x (realised)

Company Summary

Zoë's (NYSE:ZOES) operates 125 fast casual Mediterranean cuisine restaurants in 15 states across the United States. The company has emerged as one of the fastest-growing businesses in the food retail and restaurants sector. It was founded in 1995.

GP Investment & Thesis

Brentwood Associates Private Equity ("Brentwood") acquired Zoë's in October 2007 when it had 19 stores.

- Industry-leading CEO with 40 years of experience in the restaurant sector complemented GP expertise
- High customer loyalty represented a solid foundation for new store roll-outs and geographic expansion
- Leading unit economics made for an attractive financial profile on which to grow the business

PIP Investment & Thesis

PIP invested as part of a secondary transaction in Brentwood Associates IV in January 2008.

- Promising business model addressing a differentiated market within the restaurant sector
- Strategic potential based on brand recognition, a loyal customer base, and solid financials
- IPO potential once company had proven its revenue and EBITDA growth potential

Value Creation

- **Brand repositioning** using demographic and opinion analyses to better target customers
- > Store roll-outs across new geographies drove sales growth at 37% CAGR since investment
- Operational improvements along with an increasing top-line generated EBITDA growth of 465%

Exit

- Brentwood IPO'd the company in April 2014 and has been selling down shares. Including the unrealised position, the deal is marked at 7.8x invested capital (7.5x realised)
- > PIP received proceeds of £4.5m

Distribution Examples

Distributions in the Half-Year to 31st December 2014

(CONTINUED)

Cost Multiples on a Sample of the Largest Distributions in the Half-Year to 31st December 2014¹

The chart shows the range of multiples, where information was available, on initial cost achieved by the underlying fund manager on the largest 50 distributions. The value-weighted average cost multiple of the sample was 2.1 times, highlighting the continued ability of private equity managers to create significant value over the course of an investment.

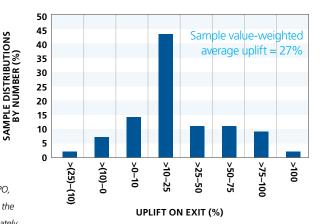

¹ The available data in the sample represented approximately 36% by value of PIP's total distributions for the half-year to 31st December 2014. This data is based upon gross cost multiples available at the time of the distribution.

Uplifts on Liquidity Event on a Sample of the Largest Distributions in the Half-Year to 31st December 2014²

The chart shows the range of uplifts on liquidity event achieved by the underlying fund manager on the largest 50 distributions. The value-weighted average uplift of the sample was 27%. This average uplift is consistent with PIP's view that realisations tend to be significantly incremental to returns. PIP's mature portfolio is well placed to continue to generate a good level of distributions in the coming year.

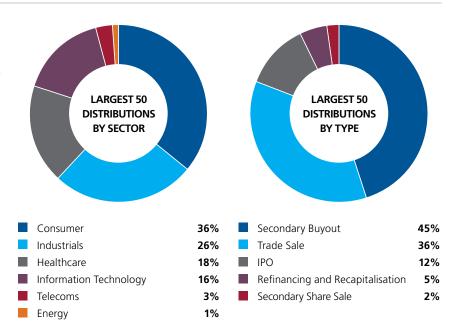

² Uplift on liquidity event compares the value received upon realisation against the investment's carrying value prior to the transaction taking place. In the event of an IPO, the uplift is the difference between the carrying value prior to the IPO and the value at the close of the first day of trading. The available data in the sample represented approximately 34% by value of PIP's total distributions for the half-year to 31st December 2014.

Largest 50 Distributions by Sector and Type

The portfolio generally benefited from better economic and public market conditions, with all sectors providing good levels of distributions. In particular, distributions reflected potentially growing confidence among acquirers in the consumer and industrials sectors as the economic recovery becomes better established.

Secondary buyouts represented the most significant source of exit activity, with trade sales and IPOs also playing an important part.

Investments Called in the Half-Year to 31st December 2014

Investments called during the year ranged across regions and sectors, including consumer, speciality pharmaceuticals, energy companies and outsourced business services providers.

Calls by Region and Stage

Calls

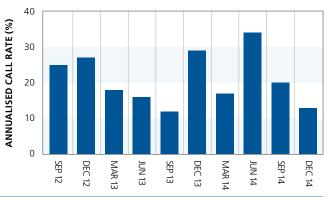

PIP paid £16m to finance calls on undrawn commitments during the half-year to 31st December 2014, equivalent to an annualised call rate of 18% of opening undrawn commitments.

Quarterly Call Rate¹

PIP's call rate has declined during the half-year.

A significant proportion of PIP's undrawn commitments are older than 7 years and have low call rates.

Largest 25 Calls by Value

The largest 25 calls show a high proportion of new investment focused on the consumer sector. Good quality consumer companies, often operating in niches with solid customer bases and sound business models, should be well positioned to benefit from a continuation in the recovery of the global economy.

¹ Call rate equals calls in period divided by opening undrawn commitments. All call figures exclude the acquisition cost of new secondary and co-investment transactions.

TOTAL			15.8

New Commitments

PIP committed £132m to new investments during the half-year, concentrated on buyout funds in the US and European markets. £66m was drawn at the time of purchase. As a result of Pantheon's targeted origination, PIP continued to benefit from good deal flow, with all secondary deals during the half-year in processes that were either proprietary or involved restricted competition.¹

New Commitments by Region

Over 90% of new commitments made in the half-year were to private equity funds focused on the US and European markets, reflecting the larger secondary opportunity in these regions.

New Commitments by Stage

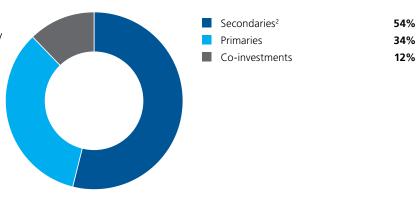

A significant majority of new investments were made in the large buyout and mid-market space, targeting funds whose portfolio companies have high barriers to entry, strong cash generation and multiple potential exit routes.

New Commitments by Deal Type

Secondary transactions accounted for the majority of new commitments.

Investment activity in the half-year reflected PIP's efforts to grow its primary programme on a targeted basis, committing £45m to six top tier funds. PIP also participated in six co-investments. Co-investments and primaries offer exposure to more recent vintages and assets which may be less accessible in the secondary market.

¹ A proprietary deal is where Pantheon was in exclusive discussions with the seller. A restricted process deal is where there are three or fewer bidders for the asset.

² Includes late primary commitments.

New Commitments: Secondary and Primary (Funds)

PIP committed £72m to five secondary and two late primary transactions, with a majority of commitments in large and mid-market buyout funds. Late primary commitments enable PIP on occasion to invest in a fund being raised when there is evidence of value manifesting in the portfolio.

PIP's commitment to primaries during the half-year included four buyout funds and two growth capital firms, adding current vintage exposure with high quality managers to its portfolio.

New Secondary and Primary Commitments¹

Secondary and Late Primary Commitments in the Half-Year to 31st December 2014

New Commitment Case Studies Secondary (Funds)

Secondary Fund Case Study

Transaction Overview

Transaction completed in July 2014. The key features of the deal were:

- Concentrated single fund interest in a European large buyout fund with 15 European investments, predominantly invested during the postcrisis period, with approximately 60% of the portfolio exposed to the consumer discretionary and technology sectors
- > Pantheon had invested with the manager on a primary basis

Region	Europe	
Sector	Generalist	
Stage	Large Buyout	
Vintage	2008	
PIP commitment	€25.0m (£20.1m)	

PIP Investment Thesis

- Potential for near term exits
- Market-leading companies with strong historic growth and a weighted average EBITDA CAGR of 13% on a two-year basis at time of purchase. Furthermore, the companies were held at attractive holding valuations relative to comparable quoted companies at the date of purchase.

Secondary Fund Case Study

Transaction Overview

Transaction completed in December 2014. The key features of the deal were:

- Single fund interest in a US manager, significantly invested during the post-crisis period
- > Pantheon was an existing investor in the fund

Region	USA
Sector	Generalist
Stage	Large Buyout
Vintage	2007
PIP commitment	\$26.5m (£17.0m)

PIP Investment Thesis

The deal was considered to be attractive due to:

- Portfolio consists of strong growth potential companies, many of which are platforms for future acquisitions in the technology, media and services sectors, underpinned by secular growth trends
- > Near term liquidity potential at the time of purchase
- Geographic exposure to the US and countries where we expect growth to be driven by domestic-led consumer demand

New Commitment Case Studies Primary (Funds)

ABRY VIII Case Study

Region	USA
Sectors	TMT
Stage	Medium Buyout
Fund size	\$1,950m (£1,158m)
PIP commitment	\$10m (£6.0m)

GP Summary

ABRY Partners was formed in 1989 and is currently led by co-CEOs Jay Grossman and Peggy Koenig. The firm has grown into a premier media, communications, and information services focused private equity firm. ABRY has raised around \$12bn across three complementary fund strategies, with around 50% for the original buyout strategy. The entire ABRY team is based out of one office in Boston, MA.

GP Strategy

ABRY will invest \$25m to \$150m per investment in middle market media, communications and information services businesses, primarily in the US, with the following characteristics:

- > High barriers to competitive entry
- Non-cyclical businesses with predictable, recurring revenues such as subscription-like businesses with high customer retention rates
- High operating leverage where moderate increases in company revenues can yield even more rapid increases in operating profit
- Opportunity to significantly increase profitability through revenue growth, consolidation of expenses, add-on acquisitions leading to efficiencies of scale, or other operating improvements

Fund Strategy

- Significant sector expertise. ABRY has consistently deployed capital in the media, communications and information services sectors. The significant network and sector expertise created over the firm's 25-year history provides the team with an information advantage when evaluating potential investments, while management teams view the access to ABRY's senior professionals as valuable for growing their businesses
- Experienced management and cohesive investment team. The ABRY team is led by Jay Grossman and Peggy Koenig, who have worked at the firm for 18 and 21 years respectively. The average tenure of the 14 senior buyout professionals is 14 years. The buyout team also benefits from deal flow and knowledge generated by the firm's other strategies
- Strong and consistent track record. At the time of diligence, all of ABRY's buyout funds dating back to 2001 (Funds IV – VII) had generated attractive returns, with each of these four funds being top quartile on a multiple basis relative to the Cambridge PE benchmarks

ECI 10 Case Study

Region	Europe (UK & Ireland)	
Sectors	Generalist	
Stage	Medium Buyout	
Fund size	£512m	
PIP commitment	£7.5m	

GP Summary

ECI was founded in 1976 by the Bank of England to invest in UK small-cap companies facing liquidity issues. Since ECI 4, which was raised in 1990, the fund has been exclusively investing in UK mid-market buyouts, and have made investments totalling £868m across 108 deals. The team is split between offices in London and Manchester.

GP Strategy

ECI focuses on backing ambitious management teams in growth companies valued between £20 million and £150 million, with average equity tickets of £30m. It will aim to invest:

- Across five broad sectors which are led by different Investment Partners responsible for finding growth themes and growing niches within them. The five sectors are TMT, consumer, business services, industrials and healthcare
- Resilient business models such as significant recurring revenues, low customer churn and high barriers to entry through intellectual property including technology, brand or business model
- Opportunity for business to grow either through selective acquisitions or organically, both in the UK and Internationally. In the course of due diligence c.40% of portfolio revenues were seen to be generated from outside of the UK, with over 60% of portfolio companies having some international sales or operations overseas. Furthermore, a number of portfolio companies have made selective add-ons which are closing aligned to the business strategy to accelerate growth

Fund Strategy

- Sector expertise and functional specialisation. ECI possesses a high degree of sector expertise and functional specialisation given its focus on the UK lower middle-market. The firm's strong sector focus has allowed it to build significant domain expertise, most notably in TMT and consumer, where it has established a market leading reputation
- > Team and organisation. Transparent and meritocratic culture with a large pool of experienced partners able to source and execute deals

New Commitment Case Studies Co-investments (Directs)

PIP committed £16m to six co-investments alongside top tier managers, mainly in large and mid-sized buyout companies operating in the US and Europe with robust business models and leading market positions.

Information technology, healthcare and telecom services constituted the largest areas of focus during the half-year.

Co-investment Examples

£4.9m Co-investment

ALM MEDIA

(Wasserstein & Co.)

- Content and information services provider predominantly focused on the legal industry
- Attractive valuation versus comparables, given leading market position and strong client base
- Potential for growth driven by transition from print to higher margin digital media

£3.4m Co-investment

VERTICAL BRIDGE

- Private owner and manager of wireless communication infrastructure
- Recurring revenue, high margin business with attractive exit options
- Management growth platform focused on the development and acquisition of cellular tower and rooftop tower installations

£3.1m Co-investment

TRITECH

(Insight Venture Partners)

£2.0m Co-investment

CHINDEX

(TPG Asia)

- Public safety software provider focused on emergency response systems and records management
- Recurring revenue business model with robust customer renewal rates
- Management track record of value creation through add-on acquisitions
- Largest premium private hospital chain operator in China
- Established business model poised to benefit from supply shortage in Chinese healthcare industry
- Scope for expansion with additional hospitals in the pipeline

£1.7m Co-investment

SEBIA

(Montagu)

- Leading provider of diagnostic equipment for blood cancer and diabetes
- Defensive business model with attractive growth opportunity
- Strong domain knowledge by deal sponsors and proven track record of company management team

£0.7m Co-investment

TANIUM

(Andreessen Horowitz)

- Enterprise-scale real time security and systems management software company
- Well positioned to benefit from strong security software demand

Outstanding Commitments

PIP's outstanding commitments to fund investments are well-diversified by stage and geography and will enable the Company to participate in future investments with many of the highest quality fund managers in the private equity industry worldwide.

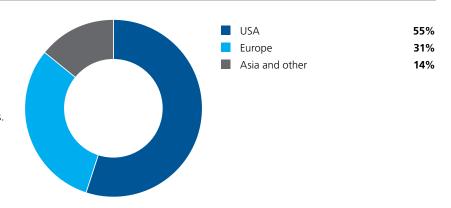

Analysis of Outstanding Commitments as at 31st December 2014

PIP's outstanding commitments to investments increased to £240m at 31st December 2014 compared with £176m at 30th June 2014. The Company paid calls of £16m and added an additional £66m of outstanding commitments associated with new investments made in the half-year. The remaining £14m increase was due to foreign exchange movements in the portfolio's underlying funds.

Geography

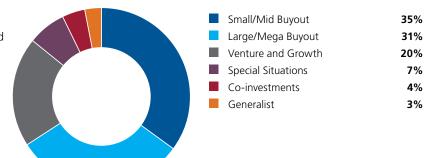

The USA and Europe have the largest outstanding commitments, reflecting the Company's investment emphasis.

Commitments to Asia and other regions provide access to faster-growing economies.

Stage

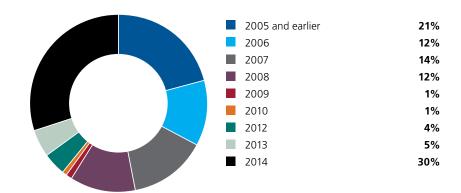

PIP's undrawn commitments are well-diversified across all major stages of private equity.

Maturity

47% of PIP's undrawn commitments are in the 2007 vintage or older. It is likely that a portion of these commitments will not be drawn.

Rise in vintage 2014 undrawns reflect increase in primary commitment levels.

Finance and Share Buybacks

Finance

Cash and Available Bank Facility

At 31st December 2014, PIP had cash balances of £123m.

In addition to these cash balances, PIP can also finance investments out of its multi-currency revolving credit facility agreement ("Loan Facility"). The Loan Facility is due to expire in November 2018 and comprises facilities of \$100m and €46m which, using exchange rates at 31st December 2014, amount to a sterling equivalent of £100m. At 31st December 2014, the Loan Facility remained fully undrawn.

Undrawn Commitment Cover

At 31st December 2014, the Company had £223m of available financing, comprised of its cash balances and Loan Facility. The sum of PIP's available financing and private equity portfolio provide 4.5 times cover relative to undrawn commitments.

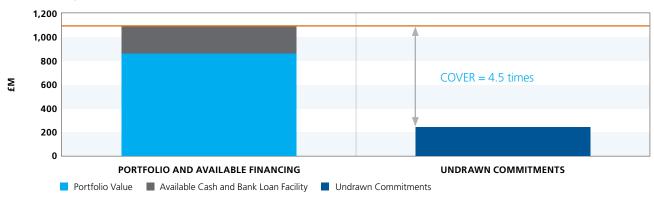

It should be noted that a portion of the Company's undrawn commitments of £240m is unlikely to be called in full by the underlying managers. When a fund is past its investment period, which is typically between five and six years, it generally cannot make any new investments (only drawing capital to fund existing follow-on investments or pay expenses). As a result, the rate of capital calls in these funds tends to slow dramatically.

Approximately 60% of the Company's undrawn commitments are in fund vintages that are greater than six years old.

Share Buybacks

PIP bought back 0.5%¹ of its shares in the financial year. In total, 125,000 ordinary shares and 200,000 redeemable shares were bought back at a weighted discount of 16% and 23% respectively, resulting in a total uplift to NAV per share of 1.5p, or 0.1% of opening NAV per share. The discounts at which the Company's shares trade from time to time may make buybacks an attractive investment opportunity relative to other potential new investment commitments.

PIP Financing Cover: 31st December 2014

¹ Calculated using the number of shares bought back in the half-year divided by the number of shares outstanding at 30th June 2014.

Half-Year Results

Interim Management Report and Responsibility Statement of the Directors

IN RESPECT OF THE HALF-YEARLY FINANCIAL REPORT

Interim Management Report

The important events that have occurred during the period under review, the key factors influencing the financial statements and the principal uncertainties for the remaining six months of the financial year are set out in the Chairman's Statement and the Manager's Review.

The principal risks facing the Company are substantially unchanged since the date of the Annual Report for the year ended 30th June 2014 and continue to be as set out in that report.

Risks faced by the Company include, but are not limited to, funding of investment commitments and default risk, risks relating to investment opportunities, financial risk of private equity, long-term nature of private equity investments, valuation uncertainty, gearing, foreign currency risk, the unregulated nature of underlying investments, taxation and the risks associated with the engagement of the Manager or other third party advisers.

Responsibility Statement

Each Director confirms that to the best of their knowledge:

- the condensed set of financial statements has been prepared in accordance with the Statement on Half-Yearly Financial Reports issued by the UK Accounting Standards Board.
 - this Half-Yearly Financial Report includes a fair review of the information required by:
 - (a) DTR 4.2.7R of the Disclosure and Transparency Rules, being an indication of important events that have occurred during the first six months of the financial year and their impact on the set of financial statements; and a description of the principal risks and uncertainties for the remaining six months of the year; and
 - (b) DTR 4.2.8R of the Disclosure and Transparency Rules, being related party transactions that have taken place in the first six months of the current financial year and that have materially affected the financial position or performance of the Company during that period; and any changes in the related party transactions described in the last annual report that could do so.

This Half-Yearly Financial Report was approved by the Board of Directors on 25th February 2015 and the above responsibility statement was signed on its behalf by Tom Bartlam, Chairman.

Notes to the Half-Yearly Financial Statements (unaudited)

1. Financial Information

The financial information has been prepared on the historical cost basis of accounting, except for the measurement at fair value of investments and financial instruments, and in accordance with applicable UK accounting standards on the basis that all activities are continuing. The accounting policies set out in the statutory accounts for the year ended 30th June 2014 have been applied to this Half-Yearly Financial Report. They have also been prepared on the assumption that approval as an investment trust will continue to be granted.

The accounting policies are also consistent with the Statement of Recommended Practice (revised January 2009) issued by the Association of Investment Companies. The financial information has been prepared in accordance with the Accounting Standards Board Statement 'Half-Yearly Financial Reports' issued in July 2007.

The financial information contained in this Half-Yearly Financial Report is not the Company's statutory accounts. The financial information for the six months ended 31st December 2014 and 31st December 2013 are not for a financial year and have not been audited but have been reviewed by the Company's auditors and their report can be found on page 46. The statutory accounts for the financial year ended 30th June 2014 have been delivered to the Registrar of Companies and received an audit report which was unqualified, did not include a reference to any matters which the auditors drew attention by way of emphasis without qualifying the report and did not contain statements under section 498 (2) and (3) of the Companies Act 2006.

2. Going Concern

The Company's business activities, together with the factors likely to affect its future development, performance and position, including its financial position, are set out in the Chairman's Statement and Manager's Review on pages 5 to 36.

At each Board meeting, the Directors review the Company's latest management accounts and other financial information. Its commitments to private equity investments are reviewed, together with its financial resources, including cash held and the Company's borrowing capability. One-year cash flow scenarios are also presented to each meeting and discussed.

After due consideration of the balance sheet and activities of the Company and the Company's assets, liabilities, commitments and financial resources, the Directors have concluded that the Company has adequate resources to continue in operation for the foreseeable future. For this reason, they consider it appropriate to continue to adopt the going concern basis in preparing the financial statements.

3. Tax on Ordinary Activities

The tax charge for the six months to 31st December 2014 is £231,000 (six months to 31st December 2013: £612,000; year to 30th June 2014: £945,000). The tax charge is wholly comprised of irrecoverable withholding tax suffered. Investment gains are exempt from capital gains tax owing to the Company's status as an investment trust.

4. Related Party Transactions

Under the FCA listing rules, the Manager, Pantheon Ventures (UK) LLP, is regarded as a related party of the Company.

During the period, services were provided with a total value of £5,202,000, being £4,908,000 directly from Pantheon Ventures (UK) LLP and £294,000 via Pantheon managed fund investments. (31st December 2013: £4,522,000; £4,232,000; and £290,000; year to 30th June 2014: £9,312,000; £8,749,000; and £563,000 respectively). At 31st December 2014, the amount due to Pantheon Ventures (UK) LLP in management fees and performance fees disclosed under creditors was £830,000 and £nil respectively.

5. Performance Fee

The Manager is entitled to a performance fee from the Company in respect of each 12 calendar month period ending on 30th June in each year. The performance fee payable in respect of each such calculation period is 5% of the amount by which the net asset value at the end of such period exceeds 110% of the applicable "high-water mark", i.e. the net asset value at the end of the previous calculation period in respect of which a performance fee was payable, compounded annually at 10% for each subsequent completed calculation period up to the start of the calculation period for which the fee is being calculated. For the six month period ended 31st December 2014, the notional performance fee hurdle is a net asset value per share of 2,139.06p. The performance fee is calculated using the adjusted net asset value. In previous periods this was adjusted to exclude the derivative asset.

The performance fee is calculated so as to ignore the effect on performance of any performance fee payable in respect of the period for which the fee is being calculated or of any increase or decrease in the net assets of the Company resulting from any issue, redemption or purchase of any shares or other securities, the sale of any treasury shares or the issue or cancellation of any subscription or conversion rights for any shares or other securities and any other reduction in the Company's share capital or any distribution to shareholders.

TOTAL	481	-	862,832	863,313

Level 3 Financial Assets at Fair Value Through Profit or Loss at 31 December 2014

PRIVATE EQUITY INVESTMENTS

	£'000
Opening balance	814,846
Purchases at cost	106,034
Transfer of book cost to level 1*	(2,624)
Sales proceeds	(143,055)
Total gains or losses included in "Gains on investments" in the Income Statement	
– on assets sold	44,091
– on assets held as at 31st December 2014	43,540
CLOSING BALANCE	862,832

^{*} The transfer of book cost to level 1 is due to stock distributions received from private equity investments.

Independent Review Report

TO PANTHEON INTERNATIONAL PARTICIPATIONS PLC

Introduction

We have been engaged by the Company to review the condensed set of financial statements in the Half-Yearly Financial Report for the six months ended 31 December 2014 which comprises the Income Statement, Reconciliation of Movements in Equity Shareholder's Funds, Balance Sheet, Cash Flow Statement and Notes to the Half-Yearly Financial Statements. We have read the other information contained in the Half-Yearly Financial Report which comprises only the Half-Year at a Glance, Performance Summary, Historical Data, Chairman's Statement, Objective and Investment Policy, Manager's Review and the Interim Management Report and Responsibility Statement of the Directors and considered whether it contains any apparent misstatements or material inconsistencies with the financial information in the condensed set of financial statements.

This report is made solely to the Company in accordance with guidance contained in ISRE (UK and Ireland) 2410, 'Review of Interim Financial Information performed by the Independent Auditor of the Entity'. Our review work has been undertaken so that we might state to the Company those matters we are required to state to them in a review report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company, for our review work, for this report, or for the conclusion we have formed.

Directors' Responsibilities

The Half-Yearly Financial Report is the responsibility of, and has been approved by, the Directors. The Directors are responsible for preparing the Half-Yearly Financial Report in accordance with the Disclosure and Transparency Rules of the United Kingdom's Financial Conduct Authority.

As disclosed in Note 1, the annual financial statements of the Company are prepared in accordance with applicable United Kingdom law and Accounting Standards (United Kingdom Generally Accepted Accounting Practice) and with the Statement of Recommended Practice 'Financial Statements of Investment Trust Companies and Venture Capital Trusts', issued in January 2009. The financial information in the Half-Yearly Financial Report has been prepared in accordance with the Accounting Standards Board Statement 'Half-Yearly Financial Reports' issued in July 2007.

Our Responsibility

Our responsibility is to express to the Company a conclusion on the condensed set of financial statements in the Half-Yearly Financial Report based on our review.

Scope of Review

We conducted our review in accordance with International Standard on Review Engagements (UK and Ireland) 2410, 'Review of Interim Financial Information Performed by the Independent Auditor of the Entity' issued by the Auditing Practices Board for use in the United Kingdom. A review of interim financial information consists of making enquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with International Standards on Auditing (UK and Ireland) and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

Conclusion

Based on our review, nothing has come to our attention that causes us to believe that the condensed set of financial statements in the Half-Yearly Financial Report for the six months ended 31 December 2014 is not prepared, in all material respects, in accordance with the Accounting Standards Board Statement 'Half-Yearly Financial Reports' and the Disclosure and Transparency Rules of the United Kingdom's Financial Conduct Authority.

GRANT THORNTON UK LLP

Auditor London 25th February 2015

Glossary of Terms

Buyout funds

Funds that acquire controlling interests in companies with a view towards later selling those companies or taking them public

Call rate

Capital calls in the period divided by opening outstanding commitments

Capital call

Call to limited partners ("LP") to pay-in a portion of the LP's committed capital when the general partner ("GP") has identified a new investment for purchase

Co-investment

Direct shareholding in a company alongside a private equity fund

Commitment

The amount of capital that each limited partner agrees to contribute to the fund when and as requested by the GP

Cost multiple

Calculated by dividing the fund's cumulative distributions and remaining value by paid-in capital. It measures fund performance by showing the fund's total value as a multiple of cost

Distribution

Cash or stock returned to the LPs after the fund has exited from an investment

Distribution rate

Distributions for the period divided by opening portfolio value

Earnings before interest, taxes, depreciation and amortisation ("EBITDA")

A measure of earnings before interest and taxes that exclude non-cash expenses. Valuation methods are commonly based on a comparison of private and public companies' value as a multiple of EBITDA

Enterprise value

The sum of a company's market capitalisation and total debt, less cash and cash equivalents

Exit

Realisation of an investment through trade sale, sale by public offering (including IPO), or sale to a financial buyer

Fund-of-funds

Private equity fund that, instead of making direct investments in companies, invests in a number of private equity funds to achieve broader diversification of risk, including individual manager risk

General partner ("GP")

The entity managing a private equity fund that has been established as a limited partnership, also commonly referred to as the private equity manager

Initial public offering ("IPO")

The first offering of stock by a company to the public on a regulated stock exchange

Internal rate of return ("IRR")

The IRR, a common measure of private equity performance, is calculated as an annualised compounded rate of return based on the timing of cash flows

Investment period

Period, typically five years, during which the GP is permitted to make new investments

J-Curve

Illustrates the historical tendency of private equity funds to experience capital outflows and negative returns in early years, and cash flow distributions and investment gains in future years as portfolio companies mature

Limited partner ("LP")

Institutions or individuals who commit capital to a private equity fund established as a limited partnership. Limited partners are generally protected from legal actions and any losses beyond their original investment

Liquidation

The sale of all remaining assets of a fund prior to its final cessation of operations

Management fee

Annual fee, typically charged as a percentage of LP commitments to the fund during the investment period and attenuating thereafter, intended to cover the costs of running and administering a fund

Net asset value ("NAV")

Amount by which the value of assets of a fund exceeds liabilities, reflecting the value of an investor's attributable holding

Net portfolio cash flow

Income and gains from funds following exit realisations less capital calls to finance investments or expenses

Outstanding commitments

Undrawn portion of total commitment

Paid in capital

Cumulative amount of capital that has been drawn down

Portfolio company

A company that is an investment within a private equity fund

Primaries

Commitments made to a private equity fund at the time a fund is formed

Private equity

Investments made in non-public companies through privately negotiated transactions

Secondaries

Purchasing existing private equity fund interests and commitments from an investor seeking liquidity in such funds

Uplif

Increase in value received upon realisation of an investment relative to its carrying value immediately prior to realisation

Valuation multiples

Multiple of earnings (typically EBITDA or net income) or revenue applied in valuing a business enterprise

Venture capital

Investment in early and development-stage companies, often used to finance technological product and market development

Vintage

The first year that the private equity fund makes an investment
