New MOBOTIX D14 DualDome Camera With 6.2 Megapixels

The new weatherproof and shock-resistant MOBOTIX D14 DualDome camera with 6.2 megapixels is a more powerful successor model of the D12 camera. With the two separately adjustable camera modules, each with 3.1 megapixels, the D14 offers a variety of ways to examine a scene since the

two modules can be combined to create one image. The D14 has a digital PTZ and no mechanical moving parts.

Donbass Arena (Ukraine) - Security In A UEFA Certified Stadium

The Donbass Arena in Ukraine was opened on August 29, 2009 with a sensational party which was attended by the Ukrainian president himself. This arena was the very

first Eastern European football stadium to fulfill the UEFA criteria for an elite venue.

It will host the 2012 European Championship.

The Only IP Video Door Station In The World Featuring Allround View Without Any Blind Spots And With Worldwide Connectivity

MOBOTIX released the T... IP Video Door Station on December 2011. In addition to the video door intercom, MOBOTIX also released the access module Security two-wire 2wire info n telephony sta

user to establish a direct connection to any VoIP phone, computer or smartphone running VoIP. This means that with appropriate infrastructure, the user can establish connection, remotely open doors, record video messages and review them anywhere in the world.

High-resolution 3.1 megapixel video system hemispheric version asynchronous sound robust, fully weatherproof housing

MOBOTIX, manufacturer of complete, high-resolution IP video systems, presents the new M24M Allround camera. This successor to the very successful M22M has a new microprocessor and a modified system platform, which enables smooth video frame rates of up to 30 fps, even at a megapixel resolution.

MOBOTIX Launches S14 FlexMount - The World's First Flexible Double Hemispheric Camera

The S14 FlexMount, for from MOBOTIX, the world's first flexible double hemispheric camera, is now available. The camera, which is available in both mono (S14M) and dual (S14D) versions, features a wide range of mounting opportunities. For instance, it is equipped with two hemispherical camera modules integrated into the main housing.

This makes it a perfect tool for process optimization or marketing purposes and can be used in small retail stores as well as in public buildings such as museums or airports in order to receive important information. The MOBOTIX Q24M-Sec hemispheric camera, which can capture an entire room without blind spots, has now even more to offer with the new integrated MxAnalytics video analysis tool. MxAnalytics is an efficient tool for process optimization or marketing purposes and can be used in small retail stores as well as in public buildings such as museums or airports in order to receive important information.

MOBOTIX Expands Its Range Of Training Courses In All Aspects Of Complete IP Video Systems

Dates For New Software And Hardware Seminars Plus A Beginners Workshop Winnweiler/Langmeil, Germany, 3 March 2011. MOBOTIX, manufacturer of complete high-resolution IP video systems, extended its seminar program for 2011, tailored to the different needs of the participants.

How For New And Stu- Around The Glob

East, United States - MOBOTIX is the largest exhibitions around the world simultaneously. For the first time, it has presented its IP network at the GDSF, the Global Digital Security Forum in Shanghai, at the end of the year and at GITEX in Dubai, the third largest exhibition worldwide at the beginning of the year. While not a newcomer at the ISC New York, MOBOTIX' participation at the exposition also proved to be successful.

... Letter To The Shareholders

Dear Shareholders,

The new fiscal year 2012/13 began satisfactorily in the first quarter with total output of EUR 21.0 million (+4.4%) and an EBIT margin of 17.5% adjusted for a non-recurring special factor.

Sales growth in Germany and Asia nearly compensated for divergent trends in some European countries and the impact of the hurricane on the east coast of the United States, which made it necessary to entirely vacate the offices of MOBOTIX Corp. on short notice and move into new, temporary office spaces.

The enormous potential of our company, the international leadership of our products and the satisfaction of our partners and customers with our products have also been confirmed by a neutral party:

For the second time, the management consulting firm Munich Strategy Group (MSG) selected MOBOTIX as the leader among the Top 100 medium-sized companies in Germany, and more than 75,000 readers voted MOBOTIX as the winner of the GIT Security Award 2013 in the "CCTV" category.

Our new Chief Financial Officer is Klaus Gesmann, whose many years of experience in international companies in the technology sector will contribute to our future development. He replaced Lutz Coelen in that position on January 1, 2013.

Based on current developments, I am convinced that MOBOTIX will continue its success story in the current fiscal year. At the same time, I thank you for your great interest in our shares and for your trust!

Dr. Ralf Hinkel • CEO MOBOTIX AG

Highlights 2012/13 ...

- February 2012:** Anniversary in Antarctica: Under the most extreme weather conditions, MOBOTIX cameras monitor the radio telescope of the German Antarctic Receiving Station O'Higgins to ensure proper continuous functioning of the radio telescope - now for ten years.
- March 2012:** With the D14D, MOBOTIX launches an update of the successful DualDome camera D14 on the market. This camera offers high image quality even in poor lighting conditions thanks to two camera modules mounted parallel to each other with two lenses and 6.2 megapixel dual sensor technology. The integrated vandalism sensor detects forced manipulation immediately.
- April 2012:** At Light+Building in Frankfurt, MOBOTIX present at their own stand the world's first S14 FlexMount in addition to the extensive product range including the most updated version of the dual dome camera D14, a prototype of the T24-Display with touchscreen as well as new accessories.
- May 2012:** The Management resolves to repurchase shares up to a price of EUR 24 within the share buyback program, which had been resolved on 15 July 2010 and had been extended on 5 October 2010.
- June 2012:** In Langmeil the production of the new S14 FlexMount has started. The first double hemispheric camera features miniature lens units and offers a wide range of flexible application scenarios.
- July 2012:** MOBOTIX and the European Football Championship: At the Donbass Arena approximately 560 cameras provide security for around 50,000 spectators. MOBOTIX cameras are also used to help evaluate decisions during the Olympic Games 2012 in London.
- August 2012:** Count, measure, analyze: With MxAnalytics, MOBOTIX launches an efficient tool that can be used to receive important information for process optimization and marketing purposes.
- September 2012:** Successful participation in the trade show "security" in Essen: For the first time, MOBOTIX presents the dual camera M15 with a resolution of up to two times five megapixel. The market launch is scheduled for 2013.
- October 2012:** For the second time, MOBOTIX earns first place in the "Top 100 - Small and Medium-Sized Business Rankings 2011" of the Munich Strategy Group (MSG).
Despite the weaker market environment, MOBOTIX AG ends fiscal year 2011/12 with an increase in turnover of 12%.
- November 2012:** More than 75,000 readers chose MOBOTIX the winner of the GIT Sicherheit Award 2013 in the category C "CCTV".
- December 2012:** The Supervisory Board appointed Klaus Gesmann as new Chief Financial Officer at its meeting on December 13, 2012. He succeeds Lutz Coelen on January 1, 2013.

Prime Standard since
March 31, 2008

... Company Profile

As a publicly traded company, MOBOTIX AG is a software Company with in-house hardware development for digital, high-resolution and network-based video security solutions. Whether in embassies, airports, gas-stations, highways or private homes, MOBOTIX video systems are now found world-wide with over one hundred thousand units in operation on every continent. In addition to the actual IP video cameras with megapixel resolution, MOBOTIX also produces interface components and video management software for operating complete security solutions. The system concept – a distinctive software solution and decentralized camera systems – significantly distinguishes MOBOTIX from its competitors with MOBOTIX first having made high-resolution, hemispheric systems cost-efficient. With over 350 employees, and an export share of over 70%, MOBOTIX has achieved a 6% global market share.

MOBOTIX has designed a decentralized system architecture that allows images to be analyzed in the camera, instead of a central PC. Thus, the cameras detect movements in the image independently, store them in a database and report the results via eMail or VoIP phone calls. This decentralized structure relieves the network, allows the integrated video management to make higher image rates possible and reduces the number of storage systems for recording high-resolution video sequences many times over.

The hemispheric camera technology developed at MOBOTIX permits the recording of an entire room from the ceiling or a wall – independent of the selected live image detail – using a single camera, so that other room areas can be viewed later during a search-analysis phase. Details of the hemispheric live image, resembling a fish-eye, are already digitally transformed in the camera in such a way that the users believe they are using a panning camera.

The powerful innovative strength of MOBOTIX has enabled it to be the first to introduce nearly all significant innovations in the IP camera sector market in the last ten years. For this reason, MOBOTIX is seen as the industry's technology leader. With growth rates up to 50%, MOBOTIX has continued to rapidly gain global market share since 1999.

MOBOTIX uses hemispheric technology in the T24 IP Video Door Station to achieve further growth in the new, closely related market for access control and door intercom devices and to establish itself in the rapidly expanding home automation sector. When the doorbell rings, a connection is established with a standard VoIP phone or a computer via the network so that the door station can be operated and the door opened remotely from anywhere in the world. The integration of iPhone and iPad play an important role here.

HiRes Video Innovations

The German company MOBOTIX AG is known as the leading pioneer in network camera technology and its decentralized concept has made high-resolution video systems cost efficient.

The MOBOTIX Concept

Was Somewhat Out Of Ordinary ...

HiRes Video Innovations And Technology Leader

The German company MOBOTIX AG is known as the leading pioneer in network camera technology since its founding in 1999, and its decentralized concept has made high-resolution video systems cost efficient.

MOBOTIX has been producing megapixel cameras exclusively for many years now and is regarded as the global market leader for high-resolution video systems.

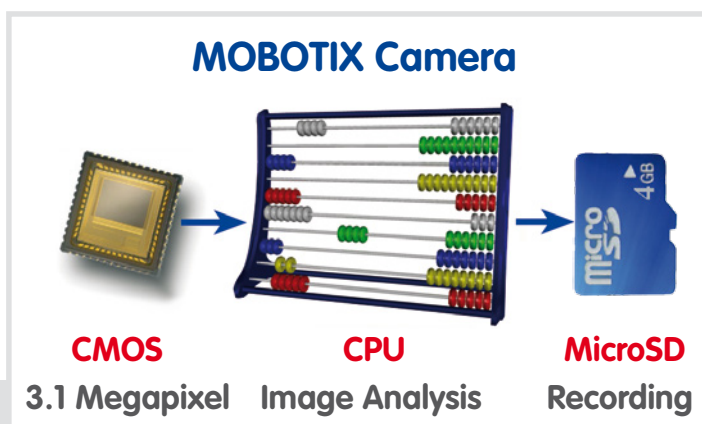

Why High-Resolution Systems?

The higher the resolution, the more accurate the detail in the image. With analog technology, a recorded image generally has no more than 0.1 megapixels (CIF). One single MOBOTIX camera with 3.1 megapixels records around 30

times more detail. As a result, larger image areas with up to 360° allround views are possible, thus reducing the number of cameras and therefore the costs. For example, four lanes of a gas station can be recorded with one MOBOTIX camera instead of four conventional cameras.

Disadvantages Of The Old Centralized Standard Solution

Usually, cameras only supply the images while the processing and recording is done later on a central PC using expensive video management software. This traditional centralized structure has many limitations, since it requires high network bandwidth and the PC processing power is not enough for several cameras. An HDTV MPEG4 film already puts considerable strain on a PC, so how can it be expected to process dozens of high-resolution live cameras? Traditional centralized systems are therefore less suitable and unprofitable when compared with high-resolution systems due to the high number of PCs needed.

Network Video

MOBOTIX has redefined video. Whether on the Internet, in traffic management, building surveillance or banking environment, the MOBOTIX camera is connected to the network like a printer and live and recorded images can then be retrieved from any PC without installing any software.

... Is The Benchmark Today

The Decentralized MOBOTIX Concept

Unlike other systems, with the decentralized MOBOTIX concept, a high-speed computer and if necessary, digital long-term memory (MicroSD Card) is built into every camera, providing several days of recording time. The PC and the video control center now serve only for viewing and controlling the cameras (PTZ), not for analysis or recording. This makes it unnecessary to purchase expensive video management software, as the most important and computer-intensive functions are already integrated in the MOBOTIX cameras.

- **fewer storage devices**, because in the decentralized system, 10 times the standard number of cameras can simultaneously store high-resolution HDTV video with sound on one PC/server,
- **lower network bandwidth**, because everything is processed in the camera itself and the high-resolution images therefore do not have to be constantly transferred for analysis.

Robust And Low-Maintenance

MOBOTIX cameras have neither mechanical motors for lenses nor for movement. Without

The Benefits

MOBOTIX video solutions therefore require significantly:

- **fewer cameras** due to the more accurate detail of panoramic images with megapixel technology,

any moving parts, they are therefore so robust that maintenance is reduced to a minimum. The unique temperature range from -30 to +60 °C is achieved without heating or a fan at only 3 watts. Since no PC hard disk is required for recording, there are no parts that wear out in the entire video system.

Software Included

With MOBOTIX, the software for controlling the camera and searching for events can be used at no charge. You can easily control the video system from any standard PC. This even works worldwide via a DSL Internet connection.

A Success Around The World ...

Ukrainian "Druzhba" Ice Hockey Stadium

The Druzhba Palace of Sports in Donetsk is home to the Ukrainian champion ice hockey team "HK Donbass Donetsk", which is aiming to join the ranks of the Kontinental Hockey League (KHL), where it would play against hockey teams from Russia, Kazakhstan, Latvia and Belarus to play. The stadium was equipped with a video security solution from MOBOTIX during refurbishment work due to increasing popularity of the sport. A total of 74 cameras are up and running

in order to provide the highest possible security for the fans and players at all times. The main entrance is secured by D14 cameras, while Q24 cameras secure the entrances to the grandstands and the entrances

to the staff, team and VIP areas. M24 mono cameras are installed in the grandstands and all of the events in the corridors are monitored by D24M dome cameras. Security is guaranteed both inside and outside the arena, where M12D cameras keep watch over the parking lot. The rising visitor count has led to plans to expand the grandstands and build additional parking spaces, which means that more cameras from MOBOTIX will be used in the future.

School District In Canada

The Calgary Catholic School District (CCSD) in Alberta, Canada, employs video security solutions from MOBOTIX in order to prevent acts of violence and vandalism and to ensure the safety of more than 45,000 students. More than 200 cameras have been installed across multiple campuses. The incidence of graffiti and vandalism was reduced so much that within nine months the complete cost of the installation had paid for itself. There are also no additional costs for managing the cameras thanks to the use of MxControlCenter. The Q24 Hemispheric camera with a 360° allround view is used as an internal camera while the D12 and M12 cameras are used to keep a close eye on the outside areas of the schools. There are already plans to continue upgrading the security technology in the 104 schools in Calgary.

... Over 100,000 In Operation

Loading Management In Gießen, Germany

BIEBER + MARBURG, Hesse's largest steel trading company, uses MOBOTIX cameras to secure its halls, the outside area and the entrances to the office building. The video technology is not only needed to prevent theft and break-ins. Up to 50 heavy-duty trucks arrive and leave the premises every day and all processes related to the loading of approximately 500 to 600 metric tons of steel are carefully documented. Almost 50 network cameras are up and running and used to monitor emergency exits, among other things. When the company closes its gates on the weekend, an image is sent to the main office every time a door is unlocked. There are two additional cameras mounted on a crane in the warehouse at a height of 12 meters that secure the fully automated inventory control system and report disruptions.

Animal Observation In Alabama, U.S.

The Birmingham Zoo in Birmingham, Alabama, covers an area of 20 hectares and is home to 750 animals of 250 species, including many endangered ones, too. The M12, M24 and Q24 camera models cover the Trails of Africa exhibit, select point-of-sale stations and the safari cafeteria. The cameras are utilized to

investigate theft and locate lost children. The cameras will also collect critical information on animal behavior. The Birmingham Zoo is proposing unique ways elephant conservation with its new Trails of Africa exhibit, and it also serves as a science and ecology facility for primary schools. Zoo officials were able to experience the birth of a baby orangutan thanks to remote access provided by MxControlCenter. The Birmingham Zoo is the family attraction of choice in southeastern U.S. and is enjoying increasing popularity, which is why there are plans for more animals, exhibit areas and state-of-the-art technologies.

Low System Costs ...

The Hemispheric Camera

The primary components of the hemispheric camera include a fisheye lens, a high-resolution image sensor and image correction software that is integrated into the camera. Using an ultra-wide angle fisheye lens, the camera captures a 180° hemispheric image of the room and projects it onto a high-resolution image sensor.

When ceiling mounted, the image area of the hemispheric camera covers the entire room. The image in the hemisphere is convex, particularly near the image borders. These image sections are corrected for the viewer

by the integrated distortion correction software, allowing a view of the scene from the usual

perspective. The virtual PTZ feature allows you to enlarge or move image sections within the hemisphere, just like a PTZ camera yet, with MOBOTIX, this is achieved with no moving parts.

Handle Several Image Sections At Once

One or more image sections can be corrected for perspective in the hemispheric view, allowing you to monitor and record several different areas of a room at the same time, something that a mechanical PTZ camera is not capable of doing.

Discreet And Low Maintenance

Hemispheric cameras are extremely discreet because they manage their task with only one lens, which is generally focused on the entire room and not a specific object. MOBOTIX hemispheric cameras are without mechanical moving parts and require low maintenance. In addition, they are silent when panning and focusing on a specific image area.

Technology Leader Of Network Cameras

MOBOTIX ranks as the global market leader in high-resolution video systems. Each camera includes a high-speed processor and digital memory (SD Card) for long-term recording (decentralized MOBOTIX concept).

... Thanks To Hemispheric Panorama View

Less Cameras Thanks To Panoramic Views

Original Q24M image: Wall mounted at a height of 2.3 m

the camera is mounted on a wall, providing a wall-to-wall view of the room without

any blind spots. It offers a substantially better view of the scene, compared to other cameras, it also results in the need for fewer cameras overall. When ceiling mounted, one camera can also capture an entire room by two opposite panoramic views.

Keeping Objects In View At All Times

Using solutions featuring several individual cameras, moving objects will normally jump from one viewing area of a camera to another. This often produces a confusing situation for the viewer because objects may disappear from sight for a moment or even appear twice if the viewing areas overlap. This is not the case with hemispheric panoramic cameras. Objects remain in view at all times and the viewer can always keep good track of objects in the scene.

Everything Stored In The Recording

In contrast to a normal PTZ camera, which is always focused on one section of a room and only records that section, the virtual PTZ also allows you to pan to other areas at a later stage in the recording as the **entire room** can be recorded as a hemispheric image.

Lobby

Hemispheric 180° Panorama

Overview of room using a single camera without any blind spots

Elevator

Elevator

Q24 – The Perfect Overview

The Q24 enables a hemispheric 360° panorama view using only a single lens. One single camera can monitor all four corners of a room. The fisheye effect, which is typical for this lens, can be digitally compensated in the live image.

The MOBOTIX Storage Technology

The Superior MOBOTIX ...

MOBOTIX Storage Concept Without Bottlenecks

These days, video data is normally pre-processed and stored centrally on a PC or digital video recorder (DVR) using video management software. Video and audio streams from all installed cameras are directed

both of the network and of the recording device (PC, server). MOBOTIX cameras can of course also minimize the recording independent of the live video, and the sound channel is recorded even with video recordings of two frames per second.

Standard system requires an extra PC including software for analysis and storage

to this central device. In this case, using high-resolution cameras often results in data jam. Above all, storage is inefficient, because if the PC has limited computing power, the high-resolution video with a high frame rate must be sent directly to a storage device before it can be processed.

If, like with MOBOTIX cameras, the camera adjusts the image format and the frame rate to the correct values for the specific application (at a gas station, two frames per second are enough for the recording), it relieves the load

No Storage Limit

The decentralized MOBOTIX concept enables the user to save around 10 times the number of cameras on a single storage device because the camera manages the recording itself (on a PC, server, NAS), thus reducing load on the device. For this reason, practically speaking, there is no memory limit for the entire system because theoretically, each camera is able to manage its own terabyte-sized storage device via the network. Another benefit of this concept is the use of affordable, reliable NAS drives that do not require any special software.

Choose Your Storage Location

Every single MOBOTIX camera can be configured to record internally or externally via the network. If necessary, a USB stick can be connected by cable directly to the camera, but on the other side of the wall, where it cannot be stolen.

... Storage Solution

SD Card Memory Reduces Storage Costs

MOBOTIX cameras are also able to store up to 64 GB of video in their integrated memory. Thanks to this high storage capacity and the option of recording only the sequences in which an event occurs, external storage devices such as hard drives are rarely required. This saves on storage devices and network infrastructure and reduces the maintenance cost of mechanical components such as hard drives or fans. The internal SD cards (flash memory) are digital and since they do not have mechanical components, they are maintenance-free.

Ideal For Difficult Network Conditions Or WLAN

MOBOTIX cameras are ideal for difficult network conditions or WLAN connections because the internal flash storage bridges network failures or bandwidth fluctuations and synchronizes data when a connection is re-established with the external storage device.

The option of backing up the internal memory at preset times (for example, at night) reduces the load on the network and, in many cases, enables shared use of the existing network infrastructure.

A Single 64 GB SD Card Has Space For:

- 2 weeks of continuous recording from four gas station lanes
- 4 days of video in TV quality
- 200,000 clips of 10 s each in high-resolution
- 2 million images

MOBOTIX systems are decentralized and secure, even without a PC for storage

MOBOTIX Saves Only What Is Necessary

Only relevant image detail (fading out sky, ceiling etc.); only relevant events (e.g. movement in the image); long-term recording only with temporarily increased frame rate during event, but no storage limitations in the MOBOTIX system thanks to modern NAS storage technology.

MOBOTIX Shares ...

MOBOTIX Shares

MOBOTIX AG shares have been listed on the German Stock Exchange since October 10, 2007 and on the Prime Standard segment of "Deutsche Börse AG" since March 31, 2008.

Market Environment And Performance Of The MOBOTIX Share

In the reporting period from October to December 2012, the stock markets were able to continue the upward trend of the prior quarter and finished the year 2012 on a clearly positive note.

Nonetheless, the current trends in the international markets are still very much marked by the euro crisis and the uncertainty in the USA. The measures taken by the EU member states stabilized and calmed the markets, but not yet for the long term. In the USA, the performance of the markets was dominated by the presidential elements and the budget battle. On the whole, the US markets closed in negative territory. It remains to be seen whether it will be possible to find a sustainable compromise in the budget fight.

Since the IPO in October 2007, the MOBOTIX share has consistently proven to be an exceptionally lucrative investment, despite the highly volatile trend in the last business year and in particular in the reporting period. It is one of the few IPOs in recent years to have generated positive returns for its initial subscribers.

As an example, initial subscribers realized capital gains of 287.1% (effective date of the IPO: October 10, 2007) while all of the relevant indexes posted substantial losses in value in the same period. The DAX lost 4.7% in the same period, and the technology-focused TecDAX lost 17.7%. The German Entrepreneurial Index (GEX), on which MOBOTIX shares have been represented since June 23, 2008, also trended much slower since MOBOTIX AG's IPO, losing 62.2%. The GEX tracks owner-operated German companies within the Prime Standard segment of the Frankfurt Stock Exchange that have been listed for a maximum of ten years and are managed by their owners. To qualify as owner-operated, members of the management and supervisory boards or their families must hold between 25% and 75% of the voting shares.

Free Float
38.90%

... Most Successful IPO Of 2007

In the first quarter just ended of fiscal year 2012/13, MOBOTIX shares reached a high of EUR 20.60 on December 6, 2012, and a low of EUR 15.91 on October 2, 2012. The closing price on December 31, 2012, was EUR 18.16. Accordingly, MOBOTIX shares gained 28.7% in value in the reporting period (including dividends).

Performance of the MOBOTIX share since IPO* and in the period under review (3 months)

MOBOTIX share	287,1%	28,7%
DAX	-4,7%	5,5%
TecDAX	-17,7%	2,3%
GEX	-62,2%	-7,9%

*Reporting Date October 10, 2007

Dividend

MOBOTIX AG pursues a growth-oriented dividend policy that corresponds to corporate growth and the respective business situation. In the Annual General Meeting held for the last full fiscal year 2011/12 on December 20, 2012, a dividend of EUR 0.50 per share (prior year: EUR 1.50 per share before share split) was approved and subsequently paid to the shareholders.

Shareholder Structure

At the end of the first quarter of the fiscal year 2012/13, MOBOTIX AG continues to have a very stable shareholder base that supports the long-term and sustained development of the Company. The shareholder structure of MOBOTIX AG is as follows:

Dr. Ralf Hinkel Holding GmbH holds 50.22% of the shares and according to the voting rights notification of October 18, 2012, Martin Putsch holds indirectly 9.91%. A share buyback program was started in July 2010. As of December 31, 2012 MOBOTIX AG had acquired 128,134 treasury shares as part of the share buyback program. In the first quarter of the current fiscal year 2012/13 no further treasury shares were acquired. The free float as defined by the Deutsche Börse is 38.90%.

Dividend per share 2011/12

The Success Of MOBOTIX

Investor Relations

Since MOBOTIX AG's IPO, the Management Board has regularly engaged in dialogue with investors, analysts and financial journalists. Special emphasis is placed on the continuous flow of information. The Company fulfills the follow-up obligations of the Prime Standard segment of the Deutsche Börse AG.

In the past quarters, MOBOTIX AG continued to increase its Investor Relations activities and presented itself to interested analysts and investors at various events such as the Pan European Small and Mid Cap Conference in London, as well as roadshows in London, Zurich, Belgium, Paris and the Netherlands.

On December 20, 2012, MOBOTIX Annual General Meeting for the past short fiscal year was held at the Company's headquarters. With approximately 180 shareholders, 71.40% of the authorized capital was represented. The constructive and interesting questions, and the extraordinarily high agreement of over 99% for all proposals on the agenda clearly reflected the shareholders' confidence in the Company.

Analyst Coverage

In the fiscal year 2011 and 2012, the Bank of America Merrill Lynch and the Berenberg Bank have taken up coverage of the MOBOTIX share. Besides both new banks, analysts of the DZ Bank, the Equinet AG, Hauck & Aufhäuser and GBC AG have also taken up continuous coverage of the share.

Business And Market

Technology And Products

MOBOTIX AG is a software company with its own hardware development in the area of digital, high-resolution and network-based video security solutions. The company focuses on the development of user-friendly, complete system solutions from a single provider.

The Company's product portfolio includes the product lines **M12** (DualNight Camera), **M24** (Allround Camera), **D14** (DualDome Camera), **D24** (MonoDome Camera), **V12** (Vandalism Camera) and **Q24** (Hemispheric 360° Camera), **T24** (IP-based door station), as well as the product line **S14** (FlexMount Camera in Mono

and Dual versions) which has been available since June 2012. MOBOTIX offers a comprehensive range of accessories and powerful software solutions for all of its product lines. The MxControlCenter is a complete video management solution in the form of a control center that is able to integrate cameras from

World's No. 1 In Megapixel

... And Business Condition

other manufacturers into the video security system as well - with an unlimited number of cameras. MxEasy allows the integration of up to 16 MOBOTIX cameras and thus represents the ideal video software solution for use in the small office and home security segments. Both MOBOTIX video management solutions are offered to customers free of charge.

Market And Competition

MOBOTIX operates in the video security systems market. This market is generally referred to as the CCTV market (Closed Circuit Television market). Today's market for video security systems includes both analog video security systems and network camera systems, as well as video management software and accessories. The relevant market segment for MOBOTIX is network camera systems.

In a recent study conducted by the market research firm IMS Research in June 2012, the authors presume that global sales in the market for network cameras will grow by an annual average of approximately 27.0% from 2011 to 2016. The growth potential is estimated to be comparatively high in all global market segments (Americas, Asia, EMEA) and is not limited to a few regional markets.

The competitive market is comparatively homogeneous worldwide – approximately 80% of the large major competitors are very similar in all global market segments.

Currently, the market environment for network camera systems is developing slightly more weakly than forecast by IMS Research. Particularly in several regional markets in Europe, the debt crisis is expected to cause temporarily lower growth rates. Nevertheless, we assume that the performance of the global market for network camera systems will continue to be positive and stable with high growth rates.

Positive Business Development ...

Results Of Operations, Net Assets and Financial Position

Results Of Operations

In the first three months of the year under review 2012/13, the macroeconomic developments in Europe and non-recurring special factors impacted the business development of the MOBOTIX Group.

The debt crisis in Europe has led to significant revenue declines in some European countries. Sales decreased in the three countries Italy, France and the Netherlands by EUR 880 thousand compared to the prior year quarter. Increased sales in Germany and in several other European countries almost equaled the prior year sales in this region but could not surpass them.

Furthermore, the hurricane in October 2012 on the east coast of North America had an impact on revenue and earnings growth in the first quarter of the fiscal year. The hurricane damaged the office building of MOBOTIX CORP. in New York so severely that it led to an immediate extraordinary termination of the rental space by the owner. This made it necessary to completely vacate the

company headquarters on short notice and move into new office space on a temporary basis. Despite the provision of intensive support for the American subsidiary by the company head office in Langmeil, sales revenues decreased in this region by USD 960 thousand (-17.3%) compared to the prior year quarter. It is planned that the search for new company headquarters for the MOBOTIX CORP. will be completed in the second quarter of the fiscal year. It is not yet possible to estimate the extent to which the search and the new move of the company headquarters will influence sales performance in the second quarter.

In addition, the premature termination of a management contract resulted in additional personnel expense in the amount of EUR 0.4 million. Against the backdrop of these developments and special factors, the earnings situation of the MOBOTIX Group developed as follows:

The MOBOTIX Group generated in the first quarter of fiscal year 2012/13 a revenue of EUR 20.1 million (prior year: EUR 20.8 million) and profit before taxes of EUR 3.2 million (prior year: EUR 4.8 million). Total operating perfor-

Results Of Operations, Net Assets ...

mance (sales revenue, increase/decrease in finished goods and work in progress and other own work capitalized) increased from EUR 20.1 million to EUR 21.0 million (+4.4%).

While sales in Germany in the first quarter of the fiscal year increased from EUR 5.3 million in the prior year to EUR 5.7 million (+6.0%), the revenues in the rest of Europe (excluding Germany) decreased from EUR 7.1 million to EUR 6.7 million (-5.9%).

Sales in the rest of the world decreased from EUR 8.4 million in the first quarter of 2011/12 to EUR 7.7 million (-7.5%). The decline in revenue is primarily due to the effects of the hurricane on the east coast of the USA.

The export ratio in the first three months of 2012/13 was 71.8% (prior year: 74.4%). Since product prices were neither increased nor lowered, the decline in sales is primarily based on volume effects.

Revenues from sales of dome cameras grew from EUR 9.9 million in the first quarter of 2011/12 to EUR 10.7 million (+8.8%); revenues from sales of fixed cameras decreased compared to the first three months of fiscal year 2011/12 by 16.3% to EUR 8.3 million (prior year: EUR 10.0 million).

At 26.5%, the material usage ratio (ratio of cost of materials to total operating performance) was at the level of the prior-year quarter. The increase over the prior-year quarter of 2011/12 is mainly due to the negative changes in inventories in the first quarter of 2011/12.

MOBOTIX AG new headquarter

Revenue Germany
€ 5.7m (+6.0%)

... And Financial Position

The personnel usage ratio (staff costs to total output) adjusted for the extraordinary staff costs increased from 28.0% in the first quarter of 2011/12 to 29.2% in the period under review with a further build-up of the workforce. New hires were made in sales, production and development in particular. Compared to the first quarter of 2011/12, personnel expenses (adjusted for the extraordinary expenses) rose by EUR 0.5 million.

Other operating expenses (EUR 4.8 million, prior year: EUR 4.6 million) rose only slightly compared to the prior year. They include revenue-dependent distribution expenses such as shipping and packaging costs, advertising and marketing expenses, travel and entertainment expenses as well as expenses for temporary staff.

Earnings before interest, tax, depreciation and amortization (EBITDA) (20.4% of total operating performance) amounted to EUR 4.3 million (prior year: EUR 5.8 million). Earnings before interest and taxes (EBIT) (15.8% of total operating performance) amounted to EUR 3.3 million (prior year: EUR 4.9 million) and net income amounted to EUR 2.3 million

(prior year: EUR 3.5 million) (return on sales: 11.3%). Adjusted for the extraordinary for staff costs, EBITDA came to EUR 4.7 million (22.2% of total operating performance) and EBIT came to EUR 3.7 million (17.5% of total operating performance).

Net Assets

Development costs in the amount of EUR 0.2 million (prior year EUR 0.2 million) were capitalized in the period under review. Property, plant and equipment decreased by EUR 0.4 million, (-1.7%), to EUR 22.8 million. Capital expenditure on property, plant and equipment of EUR 0.3 million was offset by depreciation in the amount of EUR 0.7 million. The investments related primarily to investments in technical systems as well as operating and office equipment. Investments in technical systems consist largely of investments in injection molding tools and IT equipment.

Due to planned increases in coverage of individual components as well as an increase in inventories of finished products, inventories increased by EUR 1.1 million (+7.6%) to EUR 15.9 million, compared to the beginning of fiscal year.

Revenue Rest Of Europe
€ 6.7m (-5.9%)

Revenue Rest Of World
€ 7.7m (-7.5%)

Results Of Operations, Net Assets ...

Trade receivables decreased to EUR 7.9 million, a decrease of EUR 1.9 million compared to the balance sheet date as of September 30, 2012, due to the lower business volume in December 2012.

Other assets amounted to EUR 5.0 million (September 30, 2012: EUR 4.5 million) and comprised gold reserves at a carrying amount of EUR 3.6 million, tax refunds at EUR 0.5 million and advance payments of EUR 0.5 million.

Cash and cash equivalents declined by EUR 3.8 million to EUR 7.9 million (September 30, 2012: EUR 11.6 million).

On the equity and liabilities side, equity declined by EUR 4.3 million to EUR 40.8 million due to the payment of the dividend. The equity-to-assets ratio declined from 67.3% to 65.2% as total assets were reduced by EUR 4.5 million (6.7%). The number of treasury shares remained unchanged at 128,134 shares.

Due to tax expenses for fiscal year 2012/13, tax provisions rose by EUR 0.1 million to EUR 4.6 million. The decrease in liabilities to banks resulted in particular from the planned repayment of loans totaling EUR 0.3 million. At EUR 4.6 million (September 30, 2012:

EUR 3.6 million), trade payables increased by EUR 1.0 million compared to September 30, 2012.

Other liabilities decreased by EUR 1.0 million to EUR 2.2 million compared to September 30, 2012.

Based upon the developments described above, the total assets of the MOBOTIX Group decreased by EUR 4.5 million to EUR 62.5 million (6.7%) as of December 31, 2012 compared to September 30, 2012.

Financial Position

Cash flows from operating activities of the MOBOTIX Group amounted to EUR 3.7 million in the first three months of fiscal year 2012/13 (prior year EUR 4.3 million). At EUR 0.5 million (prior year: EUR 0.8 million), net cash used by investing activities is primarily due to investments in property, plant and equipment. Cash paid for capital expenditure on property, plant and equipment amounted to EUR 0.3 million. The negative cash flow from financing activities of EUR 6.9 million (prior year: EUR 7.0 million) resulted in particular from the payment of a dividend of EUR 6.6 million. In addition, EUR 0.3 million was expended for the scheduled repayment of the loan.

Cash Flow From Operating Activities
€ 3.7m (-14.8%)

... And Financial Position

The various cash flows generated during the reporting period resulted in cash and cash equivalents of EUR 7.9 million as of December 31, 2012. The Company's solvency was guaranteed at all times in the first quarter of fiscal year 2012/13. Due to the Company's creditworthiness, a number of financing options are available.

Non-current liabilities decreased by EUR 0.2 million to EUR 8.9 million compared to September 30, 2011. Non-current liabilities as a share of total assets of the MOBOTIX Group increased from 13.7% to 14.2%. As of the reporting date, current liabilities represented 20.6% of total assets, compared to 19.1% as of September 30, 2012.

The development of the Group's net assets, financial position and results of operations in the first three months of fiscal year 2012/13 reflects the expectations of the Management Board for the business development in this period, considering the current global economic developments, in particular the increased uncertainty in the markets associated with the European debt crisis and considering the extraordinary events in the USA.

MOBOTIX IP Video Door Station T24

Research And Development ...

Research And Development

Development activities were also further expanded during the first three months of fiscal year 2012/13. As of December 31, 2012, the MOBOTIX Group had 88 employees (by headcount) in its Development department. As in previous years, the primary development focus was on the creation of new hardware and software products as well as further optimization of the product functionality.

One focus in the first three months was on the development of the mobile remote station for MOBOTIX cameras and door stations as well as on the development of the M15, the successor to the M12.

In addition, the foundation was laid for further product innovations in Development.

Employees

Five employees were hired in the first three months of fiscal year 2012/13. As of December 31, 2012, the MOBOTIX group had a total of 335 employees (excluding trainees and temporary staff, including members of the Management Board; by headcount) (September 30, 2012: 327 employees).

Risk Management ...

Opportunities And Risks Of Future Development And Outlook

Risk Management

The MOBOTIX Group has implemented an adequate risk management system to ensure that risks are detected and mitigated at an early stage. The Group's risk management system is intended to identify, monitor, and control any risks that occur. In addition to risks that could jeopardize the Company's continued existence as a going concern, the system also records activities, events and developments that could significantly affect the future performance of the Company's business. As part of risk management, operational opportunities and risks are identified and managed over a period of one to three years. For strategic opportunities and risks, a correspondingly longer forecasting horizon is used.

Precautions are taken against typical business risks that could have a material influence on the Group's results of operations, net assets or financial position.

Based upon the information currently available, the MOBOTIX Group is not at present faced with any significant specific risks that, in and of

themselves, would be likely to jeopardize the continued existence of the MOBOTIX Group.

The Company continues to refine its internal structures in line with its growth and to adapt them to the scale of its business. The Company plans additional measures to strengthen and improve quality management, the internal control system, and risk management.

Material Risks

Please refer to the Annual Report for the fiscal year 2011/12 for details of any material risks.

It is currently not possible to estimate how negatively the current debt crisis in Europe and the resulting upheavals in the capital markets will impact revenue and earnings growth in the long term. If a globally more widespread recession should result from these developments, this would of course have noticeable

... And **Material Risks**

impacts on the relevant market environment of MOBOTIX. It should be noted that repercussions in the form of delays in the implementation of projects as well as weak demand can already be seen in several European countries in particular.

During the period under review, the risk situation and risk management system did not deviate notably from that described in the Annual Report for fiscal year 2011/12. The Company sees no risks at the present time or in the future that would endanger the Company's continued existence or would have a material influence on its development. Technological innovation and further expansion of the distribution network are extremely important for the Group's sustained success.

Opportunities And Outlook

The high growth rates predicted for the medium and long term create the foundation for the Company's continued successful development. In addition to a rising awareness of security issues, market growth will be driven by the switch from analog to digital technology. If this switch should happen sooner than expected, additional opportunities could

arise for MOBOTIX. Factors that could lead to an acceleration include political initiatives such as the French video law that would improve the quality of security systems in the public sector.

The Management Board assumes that technological market drivers such as increasing image resolution in video systems and more complex security installations will favor the advantages of the decentralized technology approach. This has become particularly evident through the introduction of hemispheric technology (Q24). Several providers of hemispheric cameras have come on the scene in the meantime. Due to the generally centralized system architecture of the competitors, these cameras are, however, of poor quality and/or have lower performance. This would strengthen the MOBOTIX Group's competitive position and put pressure on the competition.

MOBOTIX is currently represented by partners throughout the world. A key factor for unleashing future growth potential involves pursuing a targeted expansion of the partner network. The successful expansion of the sales network holds the key to significant growth opportunities. The outstanding global market

Opportunities, Risks ...

position – particularly in the niche markets of high-resolution network cameras – provides the conditions for ongoing and thriving growth. With the introduction of the Digital Video Door Station T24, the focus is currently on the targeted global expansion of the distribution channels to include electrical wholesalers.

In terms of regions, key growth areas for the coming months will be in North America, South America and Asia.

The introduction of the hemispheric camera technology to the market has been very successful. The fact that the technology has established itself as a new type of camera in the market, and significant major competitors are still unable to offer any products or only offer products of inferior quality demonstrates the innovative strength of MOBOTIX AG. The introduction of the S14 camera line - a completely new type of camera, in a form that had been unprecedented in the market before - is also a clear sign of innovation power.

Moreover, MOBOTIX plans to use additional product innovations in the area of video surveillance systems in the coming months to reinforce its competitive position.

Considerable future potential is seen for the new Access Control & Communication product field, particularly the T24 digital door station. The systems currently available on the market are based on analog or hybrid technology in combination with a 4/5-wire or 2-wire cabling, and a centralized approach to technology. Digital systems based on IP networks basically represent a forward-looking innovation and a market novelty. In contrast to the competition, MOBOTIX AG offers purely digital products in combination with the proven, decentralized technology approach. The products of the new Access Control & Communications product segment will enable direct communication from the front door to the smart phone, regardless of where the user is currently located. This new IP-based technology is far ahead of today's systems and also allows the use of integrative door communications, video surveillance, alarm, access control and home automation from a single source via iPhone and iPad. A significant innovation is efficient access even via mobile phone networks with low data bandwidth. The Company is accordingly aiming to be the technology leader in this market segment.

... And Outlook

The new S14 camera line with its miniature installation modules was launched at the end of June 2012, and it promises new market shares in the area of discreet monitoring. Moreover, the S14 is a camera system that has been specially optimized for use in the mobile sector for the transport market, and in this way expands the areas of application of the MOBOTIX camera systems.

The entry into the new product segment of Access Control & Communication and the associated lack of experience as to the possible speed of global market penetration on the one hand, and the rising uncertainty associated with the "euro crisis" on the other hand make it difficult to predict the outlook for the current fiscal year 2012/13 as well as the following year.

In light of the debt and financial crisis, a high degree of uncertainty and recessionary trends are likely to persist in the short term, particularly in Europe.

Considering the above-named overall conditions and taking into account the results of the first quarter, we expect continued revenue growth of about 5% and an EBIT margin of about 20% for fiscal year 2012/13.

The above forward-looking statements are of a purely predictive nature. The actual results may thus deviate substantially from these expectations.

Condensed Notes ...

Condensed Notes Of December 31, 2012

1. General Information

MOBOTIX AG was established on June 21, 1999. Since September 30, 2009, the Company's registered office has been in Winnweiler-Langmeil (Kaiserstrasse, 67722 Winnweiler-Langmeil).

MOBOTIX AG is a European technology leader and system provider in the production of high-resolution digital, network-based video security systems, video management software and systems accessories. The core technology of MOBOTIX AG is its proprietary, internally manufactured, fully digital network cameras.

MOBOTIX products are sold worldwide primarily via distributors, qualified systems integrators and specialist retailers.

The fiscal year of MOBOTIX AG begins on October 1 of one year and ends on September 30 of the following year.

2. Basis Of Presentation

The consolidated interim financial statements of MOBOTIX AG as of December 31, 2012 have been prepared in accordance with all International Financial Reporting Standards (IFRSs), International Accounting Standards (IASs) and interpretations of the International Financial Reporting

Interpretations Committee and the Standing Interpretations Committee (IFRIC / SIC) that have been adopted by the European Union and are applicable to the fiscal year 2012/13.

The accounting policies applied in the consolidated interim financial statements as of December 31, 2012, which have been prepared on the basis of IAS 34 "Interim Financial Reporting," are essentially the same as those used in the consolidated financial statements, for the fiscal year 2011/12.

These consolidated interim financial statements include, for the first time, a breakdown of the changes in equity without effect on income, in connection with the statement of comprehensive income, into such components which are to be reclassified into the income statement in future periods, and those which may not be reclassified (Amendments to IAS 1 - Presentation of Items of Other Comprehensive Income).

The condensed consolidated interim financial statements for the period under review have been reviewed by KPMG AG, Wirtschaftsprüfungsgesellschaft. This interim report is also consistent with German accounting standard No. 16 on interim financial reporting (GAS 16) issued by the German Accounting Standards Committee (GASC).

For further information on the accounting policies applied, please refer to the consolidated financial statements of MOBOTIX AG for the year ended September 30, 2012.

Unless stated otherwise, all figures in the condensed consolidated financial statements are stated in thousands of Euro (EUR '000s). The translation of Euro into thousands of Euro may give rise to rounding differences of plus or minus one unit (EUR '000s or percent).

Basis Of Consolidation

The basis of consolidation used by MOBOTIX AG for the three-month period ended December 31, 2012 is the same as that used in the consolidated financial statements for the fiscal year ended September 30, 2012 and in the period of the prior year. MOBOTIX CORP. has been retroactively included in the consolidated financial statements of MOBOTIX AG from the date in 2003 when MOBOTIX CORP. was established. MOBOTIX Ltd., Nottingham, United Kingdom and MOBOTIX DO BRASIL Ltda., São Paulo, Brazil, have not been included in the consolidated financial statements as they are not material to the consolidated financial statements of MOBOTIX AG.. MOBOTIX Ltd. and MOBOTIX DO BRASIL Ltda. are currently not operating.

3. Notes To The Income Statement

(1) Revenue

A breakdown of revenue by region and product line is presented as part of the segment information.

(2) Other Own Work Capitalized

Other own work capitalized in the first three months of fiscal year 2012/13 refers primarily to development costs capitalized in the amount of €183 thousand (prior year: €177 thousand).

(3) Cost Of Materials

EUR '000s	Oct. 1, 12- Dec. 31, 12	Oct. 1, 11- Dec. 31, 11
Cost of raw materials, supply and merchandise	5,487	4,341
Cost of purchased services	71	35
Total	5,558	4,376

Cost of materials comprises any materials used for the production of cameras. This item also comprises to a small extent expenses for purchased services, which include expenses for outsourced manufacturing activities.

Condensed Notes ...

(4) Staff Costs

EUR '000s	Oct. 1, 12- Dec. 31, 12	Oct. 1, 11- Dec. 31, 11
Wages and salaries	5,304	4,886
Social security	810	727
Total	6,114	5,613

The rise in staff costs reflects in particular the increase in the workforce. In the first three months of 2012/13, the Company employed an average of 326 persons in full-time equivalent positions (prior year: 286) (excluding trainees and temporary staff, including 4 Management Board members). As of the reporting date, the Company employed 335 persons (prior year: 300) (excluding trainees and temporary staff, including members of the Management Board; by headcount).

In addition, extraordinary staff costs amounting to €368 thousand were incurred due to the early dissolution of the contract of a Management Board member.

(5) Other Operating Expenses

At EUR 4,767 thousand, other operating expenses are roughly at the level of the prior year and include all expenses that cannot be assigned to other items. They include in particular the cost of marketing, trade fairs

and exhibitions, shipping and packaging, legal and consulting fees, as well as premises and maintenance.

(6) Income Taxes

Income taxes can be broken down as follows:

EUR '000s	Oct. 1, 12- Dec. 31, 12	Oct. 1, 11- Dec. 31, 11
Current taxes	993	1,327
Deferred taxes	-60	-63
Total	933	1,264

The tax rate applicable as of December 31, 2012 was 29.1% (prior year: 26.4%).

4. Notes To The Statement Of Financial Positions

(7) Intangible Assets

The cost of developing camera housings, electronics, and software projects was capitalized at cost in the amount of EUR 183 thousand in the first three months of 2012/13 (prior year: EUR 177 thousand). At EUR 4,470 thousand, the development costs capitalized as of December 31, 2012 (September 30, 2012: EUR 4,287 thousand) comprise all costs directly attributable to the development process. The accumulated amortization and impairment amounted to EUR 2,457 thousand as of December 31, 2012 (September 30, 2012: EUR 2,171 thousand). The development projects are depreciated in even amounts over a three-year period.

(8) Property, Plant And Equipment

Additions to property, plant and equipment of EUR 316 thousand primarily relate to costs for tools as well as operating and office equipment.

(9) Inventories

Inventories are composed of the following:

EUR '000s	Dec. 31, 12	Sep. 30, 12
Raw materials and supplies	6,878	6,453
Work in progress	5,176	4,514
Finished goods	3,882	3,843
Total	15,936	14,810

(10) Equity

Please refer to the statement of changes in equity for an overview of the development of equity.

The Annual General Meeting of MOBOTIX AG, Winnweiler-Langmeil, held on December 20, 2012 resolved to pay out a dividend in the amount of EUR 0.50 per share for fiscal year 2011/12. This corresponds to a dividend of EUR 6,571 thousand. The treasury shares held by the Company do not carry dividend rights. The dividend was paid out on December 21, 2012.

The Annual General Meeting of MOBOTIX AG, Winnweiler-Langmeil, held on December 20, 2012 resolved to pay out a dividend in the amount of EUR 0.50 per share for fiscal year 2011/12. This corresponds to a dividend of EUR 6,571 thousand. The treasury shares held by the Company do not carry dividend rights. The dividend was paid out on December 21, 2012.

Condensed Notes ...

By resolution of the Annual General Meeting of September 30, 2009, the Management Board was authorized to acquire treasury shares of the Company until September 30, 2014. The shares to be acquired based on this authorization combined with other shares of the Company, which the Company has already acquired or still possesses, may not exceed more than 10% of the Company's share capital at the time of the resolution or its exercise, accordingly 1,327,144 shares (number after the share split).

The Management Board of MOBOTIX AG adopted on July 15, 2010 to utilize the authorization of the Annual General Meeting of September 30, 2009 to acquire treasury shares pursuant to Section 71 (1) No. 8 AktG in the amount of up to 45,000 shares (number after the share split). The repurchase program was started on July 19, 2010.

Furthermore, the Management Board of MOBOTIX AG adopted on October 5, 2010 to change the conditions of the current share repurchase program to make it possible to acquire up to 150,000 shares (number after the share split).

On May 4, 2012, the Management Board of MOBOTIX AG decided to assume the resume the repurchase of share under the share buyback program adopted on July 15, 2010 and expanded on October 5, 2010 at a price not exceeding EUR 24.

The acquisition may be effected as a purchase via the stock exchange or through a public tender offer to all shareholders. In order to simplify the purchase process, should the number of tendered shares exceed the total number of shares the company plans to purchase during a publicly issued purchase offer, the purchase can be carried out under suspension of the shareholders' right to sell based on the amount of shares tendered.

While also under suspension of the shareholders' right to sell, this simplification also serves to give preference to smaller amounts of shares of up to 300 shares tendered per shareholder.

Furthermore, with the consent of the Supervisory Board, the Management Board is authorized to use the treasury shares acquired under the authorization also for purposes for which the subscription rights of existing shareholders are excluded.

As of December 31, 2012, the Company had acquired 128,134 shares. The treasury shares reduced equity by the amount of their cost.

During the period under review, the weighted number of shares outstanding was 13,143,308 (prior year: 13,201,395).

(11) Tax Provisions

The tax provisions of EUR 4,603 thousand (September 30, 2012: EUR 4,478 thousand) include provisions for municipal trade tax, corporation tax, and the solidarity surcharge for the assessment periods 2011, 2012 and 2013.

(12) Other Provisions

The other provisions primarily include provisions for warranties.

(13) Liabilities To Banks

Loans in the amount of €268 thousand were repaid as scheduled in the first three months of fiscal year 2012/13.

(14) Other Liabilities

The other liabilities have terms of less than one year. They primarily comprise personnel liabilities.

5. Other Disclosures

Material transactions and legal relationships with related parties

During the period under review, no changes of any significance occurred with regard to transactions with related parties in comparison with the fiscal year 2011/12.

Segment Information From October 1, 2012 To December 31, 2012

No definable business segments exist within MOBOTIX AG, the operating results of which are regularly reviewed by the Management Board with regard to decisions concerning the allocation of resources to these business segments or the measurement of the profitability. Due to internal structures and its size, resource allocation management within the MOBOTIX Group takes place based on sales revenues, primarily according to regions, but also according to product lines. Profitability ratios or earnings statements are only prepared on the level of the entire company. Thus, no separate financial information is calculated for definable business segments. In this respect, no reportable segments exist in terms of IFRS 8.

Responsibility Statement ...

Revenue by product line is broken down as follows:

EUR' 000s	Oct. 1, 12- Dec. 31, 12	Oct. 1, 11- Dec. 31, 11
Fixed Cams	8,349	9,972
Dome Cams	10,731	9,861
Other	990	958
Total	20,070	20,791

Revenue by region is broken down as follows:

EUR' 000s	Oct. 1, 12- Dec. 31, 12	Oct. 1, 11- Dec. 31, 11
Germany	5,654	5,333
Rest of Europe	6,686	7,103
Rest of the world	7,730	8,355
Total	20,070	20,791

The Company's product lines have not changed significantly compared to September 30, 2012.

No single customer generates more than 10% of total revenue.

Review Report

To MOBOTIX AG, Winnweiler-Langmeil

We have reviewed the Condensed Interim Consolidated Financial Statements of the MOBOTIX AG, Winnweiler-Langmeil - comprising a consolidated statement of financial positions, a consolidated income statement, a consolidated statement of comprehensive income, a consolidated statement of cash flows, a statement of changes in equity and condensed notes - together with the Interim Group Management Report of the MOBOTIX AG, Winnweiler-Langmeil, for the period from October 1 to December 31, 2011 that are part of the quarterly financial report according to § 37x Abs. 3. WpHG („Wertpapierhandelsgesetz": „German Securities Trading Act"). The preparation of the Condensed Interim Consolidated Financial Statements in accordance with those IFRS applicable to interim financial reporting as adopted by the EU, and of the Interim Group Management Report in accordance with the requirements of the WpHG applicable to interim group management reports, is the responsibility of the Company's management. Our responsibility is to issue a report on the Condensed Interim Consolidated Financial Statements and on the Interim Group Management Report based on our review.

We performed our review of the Condensed Interim Consolidated Financial Statements and the interim group management report in accordance with the German generally accepted standards for the review of financial statements promulgated by the Institut der Wirtschaftsprüfer (IDW). Those standards require that we plan and perform the review so that we can preclude through critical evaluation, with a certain level of assurance, that the Condensed Interim Consolidated Financial Statements have not been prepared, in material aspects, in accordance with the IFRS applicable to interim financial reporting as adopted by the EU, and that the interim group management report has not been prepared, in material aspects, in accordance with the requirements of the WpHG applicable to interim group management reports. A review is limited primarily to inquiries of company employees and analytical assessments and therefore does not provide the assurance attainable in a financial statement audit. Since, in accordance with our engagement, we have not performed a financial statement audit, we cannot issue an auditor's report.

... Review Report

Based on our review, no matters have come to our attention that cause us to presume that the Condensed Interim Consolidated Financial Statements have not been prepared, in material respects, in accordance with the IFRS applicable to interim financial reporting as adopted by the EU, or that the interim group management report has not been prepared, in material respects, in accordance with the requirements of the WpHG applicable to interim group management reports.

one of the most
owned and hardest
international design
competitions, the red dot
award, the Hemispheric Camera
MOBOTIX has just received an honourable
mention from the top-class expert jury. With
products sub

reddot design award
honourable mention 2009

**The Only IP Video Door Station
In The World Featuring Allround
View Without Any Blind Spots
And With Worldwide Connectivity**

MOBOTIX released the
IP Video Door Station on
December 2011. In addition
the video door intercom, MOBOTIX also released the RFID
access module (Keypad), the
Security Door Opener and the
two-wire network module (Mx-
2wire info module). The new IP
telephony standard enables the
user to establish a direct connection from the
Door Station to any VoIP phone or any com-
puter or smartphone running VoIP software.
This means that with appropriate network
infrastructure, the user can establish
connection, remotely

**High-resolution 3.1 megapixel video system with
hemispheric version, lip-
synchronous sound and
robust, fully weather-
proof housing**

MOBOTIX, manu-
facturer of complete,
high-resolution IP
video systems, pre-
sents the new M24M
Allround camera. This
successor to the very
successful M22M has a new microproces-
sor and a modified system platform, which en-
ables smooth video frame rates of up to
30 fps, even at a megapixel resolution.

**New MOBOTIX D14
DualDome Camera With
6.2 Megapixels**

The new weatherproof and shock-resistant
MOBOTIX D14 DualDome camera with
6.2 megapixels is a more powerful successor
model of the D12 camera. With the two
separately adjustable camera modules,
each with 3,1 megapixels, the D14 offers a
variety of ways to examine a scene since the
two modules can be
combined to create
one image. The D14
has a digital PTZ
and no mechanical
moving parts.

Impressive 6.2 Megapixels

Equipped with 90° wide angle and
lenses, the camera can for example, m-
a scene entirely and, at the same time
the video lens can record portrait photos in
the entrance area. The two 90°
even allow a 180° recording, for ex-
ample when monitoring an entire parking lot
one camera installed on the wall. And
the digital sensor switching function,

**Donbass Arena (Ukraine)
- Security In A UEFA-
Certified Stadium**

The Donbass Arena in Ukraine was ope-
ned on August 29, 2009 with a sensational
party which was attended by the Ukrainian
president himself. This arena was the very

stadium and will host an important venue
for the 2012 European Football Champions-
hip. The most important factor is always
to ensure maximum security for the guests.
In an emergency, it would take 8 minutes
to evacuate the entire stadium, which has
51,504. "We want our visitors to feel
here and to enjoy their stay. For this
we rely on cutting-edge security
technology," says stadium manager.

**MOBOTIX AG achieves
37% sales growth in the
first nine months of fiscal
year 2010/11**

MOBOTIX AG (ISIN DE0005218300)
system provider of high-resolution and
network-based video security systems
announces the Group's financial results
for the first nine months of fiscal year 2010/11 (July 1
to March 31, 2011). Both sales growth and
EBIT margin significantly

**MOBOTIX Expands Its
Range Of Training Courses
In All Aspects Of Complete
IP Video Systems**

**Dates For New Software And Hardware
Seminars Plus A Beginners Workshop**

Winnweiler/Langmeil, Germany, 3 March
2011. MOBOTIX, manufacturer of complete
high-resolution IP video systems, has
extended its seminar program for 2011 and
brings its seminars more closely to the
needs of the participants.

first Eastern European (VPI) workshop is intended
for European football stadium projects with MOBOTIX
to fulfill the in relation to both commercial
and UEFA criteria aspects. The workshop
for an elite into the East, United States - MOBOTIX

at the largest exhibitions around the
world almost simultaneously. For the first time,
MOBOTIX has presented its IP network
cameras at the GDSF, the Global Digital
Surveillance Forum in Shanghai, at the end of
August and at GITEX in Dubai, the third largest
IT expo worldwide at the beginning of
September. While not a newcomer at the ISC
East in New York, MOBOTIX' participation
at this exposition also proved to be a major
