MONKEYPOX OUTBREAK

Delhi reports India's 4th case, Centre in a huddle

Delhi man has no foreign travel history, attended party in Manali recently

PRESS TRUST OF INDIA
New Delhi, 24 July

The Union government on Sunday held a high-level review meeting after a 34-year-old man from the national capital with no history of foreign travel tested positive for the monkeypox virus, becoming the fourth case of the disease reported in India.

Sources said the meeting was chaired by the Directorate General of Health Sciences (DGHS) and attended by officials from the Health ministry, National Centre for Disease Control (NCDC) and ICMR. The new patient who is presently recovering at a designated isolation centre at the Lok Nayak hospital had attended a stag party in Manali in Himachal Pradesh recently, official sources told *PTI*.

A resident of West Delhi, the patient was isolated at the Hospital around three days ago after he showed symptoms of the disease. His samples were sent to the National Institute of Virology (NIV) Pune on Saturday which came out positive, Union Health Ministry officials said.

The close contacts of the case have been identified and are under quarantine as per the guidelines, the health ministry said in a statement.

Delhi Chief Minister Arvind Kejriwal on Sunday said a separate isolation ward had been set up at the Lok Nayak Jai Prakash Hospital

WHAT IS MONKEYPOX VIRUS

- According to WHO, monkeypox is caused by a virus transmitted to humans from animals and has symptoms similar to those seen in the past in smallpox patients
- Human-to-human transmission can occur through direct contact with infectious skin or lesions or body fluids, including face-to-face, skin-to-skin, and respiratory droplets
- Can be transmitted through indirect contact with contaminated clothing or linens of an infected person
- Presents with fever, rash, and swollen lymph nodes, and may lead to medical complications
- Usually a self-limited disease with the symptoms lasting for 2-4 weeks
- According to Centre's guidelines, fatality ratio has historically ranged from 0 to 11% in general population and has been higher among young children. In recent times, case fatality ratio has been 3 to 6%

A GLOBAL HEALTH EMERGENCY

- WHO has declared monkeypox a global public health emergency of international concern
- A public health emergency of international concern is the rarely used top alert available to WHO to tackle a global disease outbreak

REPORTED IN 75 COUNTRIES

- Over 16,000 cases of monkeypox have been reported from 75 countries
- There have been five deaths so far due to the outbreak
- In India, the Delhi case takes the total number to four, including three from Kerala

EFFORTS TO CURB RISE IN CASES

- The health ministry has advised airport and port health officers and regional directors from regional offices to ensure strict health screening of all arriving international travellers to minimise the risk of importation of monkeypox cases into the country

(LNJP) here for patients affected by monkeypox.

Asking people not to panic, Kejriwal said the patient is stable and recovering.

Three cases of monkeypox had earlier been reported from Kerala. Airport and Port Health Officers and regional

directors from regional offices of health and family welfare were advised to ensure strict health screening of all arriving international travellers to minimise the risk of importation of monkeypox cases into the country, a ministry statement had said.

They were advised to coordinate with stakeholder agencies at international ports and airports to streamline health screening processes besides ensuring suitable linkages with hospital facilities earmarked to each port of entry for timely referral and isolation.

Less contagious, rarely fatal: Experts

With the WHO declaring monkeypox a global public health emergency of international concern and India reporting four cases of the disease, experts on Sunday said there was no need to panic as it is less contagious and rarely fatal.

Experts said a monkeypox outbreak could effectively be tackled by strong surveillance. The virus spread can be contained by isolation of confirmed cases and quarantine of contacts, and underlined that immunocompromised individuals need to take care.

Senior scientist at Pune's National Institute of Virology (NIV) Pragya Yadav said monkeypox virus is an enveloped double-stranded DNA virus having two distinct genetic clades — the central African (Congo Basin) clade and the west African clade.

"The recent outbreak which has affected several countries leading to a worrisome situation is caused by the west African strain which is less severe than the Congo lineage reported earlier. The cases reported in India are also of the

less severe west African lineage," she told *PTI*.

The NIV is one of the major institutes of the Indian Council of Medical Research. Epidemiologist and infectious diseases physician Chandrakanth Lahariya said monkeypox was not a new virus. It has been present globally for five decades, and there is a reasonable understanding of its viral structure, transmission, and pathogenicity, he said.

"The virus causes mostly mild illness. It is less contagious and requires close per-

sonal contact with symptomatic individuals in contrast to the SARS-CoV-2 that had a respiratory spread and a high proportion of asymptomatic cases," Lahariya said, adding that vaccination for the general population was not currently recommended.

Chief of Covid Working Group of NTAGI, N K Arora, said there was no need to panic because the disease was less infectious and rarely fatal. But individuals with immunocompromised states need to be particularly careful, he said. *PTI*

SEZ...

The focus of these development hubs would not be just to boost exports, unlike the current SEZs. They would be allowed to sell in the domestic market and duties would be paid only on imported raw materials and inputs, instead of final products.

Customs duty and integrated goods and services tax (IGST) on capital goods, such as machinery, computer equipment, and raw materials, shall be deferred, according to the proposed law.

M S Mani, partner at Deloitte, said the DESH Bill is much more flexible in accommodating "the genuine needs of exporters".

"SEZ units' ability to make DTA (domestic tariff area) supplies will become relatively flexible (under DESH). Earlier, these units had to take several permissions to make supplies to the domestic market. According to the existing law, if an SEZ unit uses imported capital goods to manufacture items and then sells them in the domestic market, customs duty that was earlier exempted must be reversed. The new proposed law says that the government may give relaxation

under certain circumstances (which will be defined later)," Mani said.

The Bill shall propose the re-introduction of certain direct tax benefits, under which units set up in these development hubs shall attract a 15 per cent corporate tax until 2032; These tax benefits will apply to both greenfield and brownfield projects.

Early bird...

Operating margins tightened the most for companies in the mining & metals and IT sectors. The average operating margin (or Ebitda margin) for the early birds was down 150 basis points YoY to 28 per cent of total revenue in Q1FY23. In comparison, mining & metals companies' Ebitda margin nearly halved during the period under review to 19.8 per cent of revenue in Q1FY23, from 33.7 per cent a year ago; IT services companies' Ebitda margin tightened 411 basis points YoY to 23.7 per cent of revenue in the June 2022 quarter, from 26.8 per cent a year ago.

But banks witnessed better margins, thanks to faster growth in interest income and a sharp decline in provisions for bad loans.

The combined net profit of 23 IT services companies in *Business Standard's* sample was up 1.9 per cent YoY in Q1FY23, their worst showing since Q1FY21. The sector's combined net profit at ₹18,384 crore was the lowest in the past four quarters.

Mining and metals companies, which were leading earnings growth until recently, emerged as the biggest laggards in Q1FY23 following a sharp decline in earnings despite strong double-digit growth in net sales. The combined net profit of 17 mining & metals companies was down 44.7 per cent YoY in the June quarter, their worst showing in the past two years.

Infy...

"We had an excellent start to the financial year with 5.5 per cent sequential growth in constant currency terms. We continue to gain market share with our Cobalt cloud capability and the differentiated digital value proposition. The pipeline of big deals is larger than what we had three to six months ago," said Salil Parekh, CEO & MD, Infosys. He acknowledged that there have been discussions on recession and interest rates going up and that he sees pressure of this on some segments like mortgage businesses within the financial services sector.

Mitul Shah, head of research, Reliance Securities, said: "Considering the industry-leading double-digit revenue growth, the rising share of digital business (61 per cent of revenue), likely improvement in Ebit margin levels, and valuation comfort after stock price correction, we have a 'buy' recommendation." Overall, the results were a mixed bag. There was still no clarity on attrition and TCV (total contract value) was muted on a sequential basis. Large deals' TCV came in at \$1.7 billion, down 25 per cent QoQ and down 35 per cent YoY.

Infosys' management, like the management of other top-tier IT firms, exuded confidence over deal momentum and did not see much impact on customer sentiment over IT spends. Like other top players, Infosys, too, missed estimates on margin performance. It looks like talent retention continues to be a challenge with margins getting impacted due to high employee costs. For Infosys, the margin was affected due to higher compensation costs — which had a 160-basis point effect on the margin; also, there was lower utilisation due to higher fresher addition. It was the largest hirer of freshers in Q1 compared with peers.
