Sub: Clarification in respect of publishing financial result.

Dear Sir,

We wish to clarify that with reference to earlier announcement regarding publishing Financial Results for March 31, 2017, Munjal Showa Limited has published the financial result in Economic Times and Navbharat Times on May 20, 2017. The results published contained a typographical error wherein the column no. 3 was wrongly mentioned as "For the Quarter Ended", instead of mentioned "for the year ended".

Kindly consider the same as "for the year ended". The corrigendum in this respect shall be published in newspaper shortly.
This is for your information and record please.

Thanking You.

For MUNJAL SHOWA LIMITED

(SAURABH AGRAWAL)
Company Secretary

IN SEARCH OF THE UNKNOWN

SPIRIT-HUNTER SPEAK!

► According to paranormal researchers, spirits and ghosts are “**intelligent energy sources**” that retain “**memory patches**.”
► Often, such “**energies**” do not realise their host (body) is dead, try to re-establish past links.
► Paranormal researchers specialise in parapsychology and metaphysics. They say haunted places have high electromagnetic

field readings.

► Such fields are also generated when there’s a leakage of electricity or from a mobile phone tower nearby. Prolonged exposure to this could trigger auditory hallucination or schizophrenia.

► **80 – 90% of cases have no paranormal bearings:** these are clients with psychological disorders. Reiki healing, pranik healing, water, crystal and Vastu rituals are used to set the “energies” right.

HAUNTED PLACES IN INDIA

(ACCORDING TO PARANORMAL RESEARCHERS)

Kuldhara, Rajasthan – Cooling of ambient air, sounds, apparition sightings, hand/foot prints on babies, visitors feel very low – also cases of hallucination. Extremely high electromagnetic wave readings. R-rated zone (signifying high paranormal activity).

Dumas Beach, Gujarat – Noises & whispers, apparition sightings, visitors names called out.

Bhangarh Fort, Rajasthan – Cooling of ambient air, noises & whispers, apparition sightings.

Shaniwarwada Fort, Pune – Cries of small boy, sounds of hurried footsteps, shrieks and cries.

Mumbai – Lonavla Old Road – Apparition sightings.

Lambi Dehar Lane, Mussoorie – Apparition sightings, noises at night.

A GHOSTBUSTER’S TOOL-SET

Infra-red camera
To capture “energies” (spirits) that are not visible to naked eyes.

Thermometer
To record ambient drop in temperature when the “energies” is swirling around.

Motion Detectors
Blinks when an unseen energy source is around.

Digital Recorders
To record minute changes in radio-waves; used as a communication medium with intelligent energies.

Paranormal researchers are having a field day finding solutions to the problems of the ‘other realm’, but rationalists say there is no science behind their actions, writes **Shailesh Menon**

A techie, working in the San Francisco Bay Area, received a call from his home at Shivaji Park, Mumbai, just after the lunch hour. The techie was taken aback because it was three in the morning back home, and that was not the time his aged dad and mom ever called. It was his mom on the other end. “Why are you calling me so early in the morning? Is everything ok?” the techie asked.

The old lady spoke to her son in chaste Telugu: “Why? Can’t I call you now? Can’t I speak with my son when I want to,” the lady shot back angrily, and slammed the phone down. The techie was worried as his mom never spoke to him so harshly — and that too in Telegu, a language rarely used at home.

He called back, and this time it was his father who answered the phone — after five to six rounds of rings. He told his father about mom’s phone call a few minutes earlier. “No, she didn’t call you... She’s sound asleep. Besides, it’s early morning here,” the dad said.

The techie was quite alarmed; he had clearly heard his mom on the other end. He sent a screenshot of his mobile call log to his father on WhatsApp. But his father — and now the mom was also fully awake — denied having made any call to the US at that hour. The next day, the techie’s father visited the local telephone exchange to get a copy of his recent call-log. Upon checking the records, he found no calls were made to US from his home for over a week.

The family decided to pass off the incident as a “telecom glitch”, but a few more bizarre incidents over the next two weeks forced the

family to consult a psychologist first, and a psychic healer later, when the shrink failed to solve the problem. Constant ringing of the doorbell at dead of night — and pounding and banging of bedroom doors — made the family believe their house was haunted.

“That place had a lot of electromagnetic energies swirling around ... These energies were causing such actions,” explained Akshai Sthalekar, founder of India Paranormal Team, which conducted a series of “cleansing rituals” (with water, crystals and pranik and reiki healing) to deviate or clear-off bad energies from the techie’s family home.

BUT WAS THAT A GHOST?

“We don’t call them ghosts ... we call them energies. It could be energies let out of dead people, too. Energies cannot be created or destroyed; it just get released into the lower cosmic strata,” said Rahul Kumar, a trained allopathic doctor and founder of Bengaluru-based Spirit Hunting & Research in Paranormal.

Ghost hunters and paranormal researchers are trying to find the science behind paranormal occurrences. “Metaphysics and parapsychology form the basis of all things that cannot be explained by science,” said Kumar. But anti-superstition activists and atheists are not willing to buy these theories.

“This is all pseudo-science ... Paranormal researchers use scientific terminologies to mislead people. They just cheat people with scientific mumbo-jumbo,” said Avinash Patil, state executive president of the Maharashtra Andhashraddha Nirmoolan Samiti. Neither pure sciences nor paranor-

mal research have managed to pierce the veil of the unknown. But paranormal researchers are having a field day finding solutions to the problems of the “other realm” trying to unravel the mysteries of the “other realm” - and also make some money off it.

BIG SPOOK BUSINESS

India’s top spirit hunters such as Akshai Sthalekar, Waqar Raj, Rahul Kumar and Shishir Kumar attend to 20-30 cases every month.

“Most paranormal cases are misunderstood ... in fact, 99 out of 100 cases we attend to pertain to psychological disorders or external energy influence,” said Shishir Kumar, head of Team Pentacle, a group specialising in paranormal activities and UFO sightings.

By external energy influence, Shishir means the presence of an electronic device which emits a lot of electromagnetic waves (EMWs). Higher levels of EMW exposure leads to incurable headache and auditory hallucinations, researchers say.

Most paranormal researchers advise their clients to approach a psychiatrist prior to opting for a psychic investigation. Only when the shrink fails, the psychic healers start investigating the phenomenon. Paranormal investigators charge about Rs 15,000 to Rs 20,000 for primary investigations. The remedy part could get expensive as it may entail a series of cleansing or healing processes and religious rituals. Psychics may charge anywhere between Rs 20,000 and Rs 1 lakh to exorcise, deviate or neutralise “bad energy” or negative vibrations. “We come across a lot of such cases every

month... our clients come from all backgrounds... Bollywood stars, politicians, rich socialites, slum dwellers — everyone comes to us when they’re left with no other option,” said Sthalekar of India Paranormal Team, a member organisation of the Secret Society of the Paranormal.

“We’re flooded with panic calls when horror movies such as Conjuring get released in India,” he added.

Waqar Raj, who heads the Indian Paranormal Society, has a word of advice: “There’s a lot of fraud happening around paranormal sciences ... Lot of people are entering this field to make money. I personally feel paranormal researchers should not charge money for investigations. It should be seen as pure research.”

A few paranormal research groups have also started offering certification courses in paranormal sciences. They charge Rs 50,000-75,000 for three to six-month courses.

DECODING GHOSTS THROUGH SCIENCE

The red needle on the electromagnetic field meter (EFMs) jumped to life, swinging wildly towards the extreme right end of the monitor. The static sound flowing out of a digital voice recorder is interrupted by a short crackling sound and a prolonged hum. It turned cold suddenly — the reading on the thermometer dropped to 22 degrees Celsius, from 29 just a few minutes earlier.

A team of paranormal researchers, spending a full moon night at Kuldhara, an abandoned village in Rajasthan, was scared and elated at the same time. It was the first time all their scientific “ghost-busting gadgets” reacted concurrently to

the presence of “supernaturals”.

“Kuldhara is a haunted place ... there’s no electricity in that place, but still your EFMs come to life; sometimes it scales to as high as 20-30 milligauss. Now such high levels can’t be the effect of the earth’s geomagnetic fields alone,” said Waqar Raj.

Many a time, clients approach paranormal experts when they stumble upon “white patches” or “white apparition forms” in photographs clicked at home.

“They believe their house is haunted then ... But many a time, these are just orbs resulting out of humidity in air or dust particle on lens. We use photo detailers to inspect these photographs and report back,” said Sthalekar.

Several “poltergeist actions” also come up on the tables of most paranormal researchers. These include beds and chairs getting picked and dropped or dragged, incidents of stone throwing and crockery breaking.

“But poltergeist actions are not actually classified as paranormal activities ... some people have “high levels of brain power” to move things, without actually touching them,” said Raj. Then comes cases of apparition sightings.

“It will require a lot of energy for a ghost (or a spirit) to appear as an apparition ...,” says Rahul Kumar, the allopathic doctor-turned-spirit hunter. “So most of the time, an apparition you see is the result of a weak mind. Prolonged exposure to EMWs could weaken your mind; it may set off bouts of hallucination or even turn you a schizophrenic,” he added.

Cases of ghost possessing — where the ghost is believed to have entered a living person’s body — always accompany tales

of the afflicted physically “bending and twisting” in unimaginable ways. This, according to Kumar, is a case of ‘Rubber man syndrome’, a rare medical condition. Cases pertaining to people speaking a foreign language never learnt or even heard by them relate with another medical condition called ‘Foreign accent syndrome’. A person suffering from ‘Alien hand syndrome’ would hit or harm people sitting next to him without really meaning to do so.

“Many a time, all the above cases are misunderstood as a demonic possession or haunting,” said Rahul Kumar.

“Ghosts or spirits are intelligent energy sources ... They’re not like what they show in movies. These can’t enter human bodies in normal courses,” said Shishir Kumar of Team Pentacle.

Sthalekar added: “Psychics try to communicate with energies and try to send them away ... If the lingering energy is of a dead person, we tell the energy source it is dead and it has to move on. We help them to cross over to the other realm.”

According to Waqar Raj, the problem of “bad energy” only compounds when people use these powers to harm others. “These powers may not affect you, if you’re not scared of them ... But if you start worry about them, they’ll make you a nervous wreck, make you depressed or start suicidal tendencies,” he added.

These words do not mean much for the non-believers though. “This is purely superstition ... We challenge them to prove their theories. These people should be prosecuted under anti-superstition laws,” Patil of Andhashraddha Nirmoolan Samiti said.
