Re: Disclosure under Regulation 30 of SEBI(LODR) Regulations, 2015
Advertisement in newspapers regarding convening of Board Meeting to
consider Unaudited Financial Results of the company for the quarter ended
June 30, 2020.

Dear Sir,

In compliance of Regulation 30 of SEBI (LODR) Regulations, 2015, enclosed please
find herewith a copy of the advertisement of the Notice published in the News papers
on July 22, 2020 in regard to convening of Board Meeting on Thursday, the
August 13, 2020 to consider Unaudited Financial Results for the quarter ended
June 30, 2020.

Kindly take the same on record.

Thanking you,

Yours faithfully,
For India Lease Development Limited

Rohit Madan
Manager, Company Secretary & CFO

'No let-up in preparedness against Covid-19': Satyendar Jain

Our Correspondent

New Delhi/July 21

On the first day back at his office after recovering from the coronavirus disease (Covid-19), Delhi health minister Satyendar Jain said on Monday that the state government has no plan to lower its guard in the fight against the pandemic and there would be no let-up in preparations to deal with it. Jain was hospitalised with fever on June 15 and diagnosed with Covid-19 on June 17. On oxygen support until last Thursday, Jain credited his recovery to plasma therapy and pranayam, a breathing exercise in yoga. Edited excerpts:

Whenever doctors asked me how I was feeling, I said I was absolutely fine. The doctors used to laugh that I never said I wasn't fine. Two days after I was moved out of the ICU (intensive care unit), I came home. The doctors had said that I should stay at the

hospital, but I said when I am not in the ICU, staying in the hospital or at home was the same. Even after coming back home, I needed oxygen daily. It has just been three days since I haven't needed it.

Oxygen is very important when it comes to this disease. And, I think pranayam helps. My oxygen saturation was dipping even after I came home; when I spoke to the doctors they asked me to try pranayam. I started doing it around 12 days back and there has been an impact. So, all the people – those who have the infection and even those who don't – should do pranayam.

First of all, people should not be scared, they should be strong mentally. When I got the infection, everyone in my family other than me was worried. I was never scared. People are not scared of the disease, they are scared of dying. I never even thought that there was a possibility that I could die. That might

be the reason I recovered from the disease easily. The biggest immunity buster or booster is the mindset of the person.

We cannot decide what to do based on a seven or 10 days' trend. Today, we are getting just over a 1,000 cases a day, but we do not know whether the numbers would remain there. We are comfortable at the moment; if we scale down and then the cases start rising again, what will we do? Scaling back up is easier said than done. So, we need to wait and watch.

We are reviewing the situation daily. There was a time when some hospitals were at 100% occupancy; now it is just 50%. Beds are available at every big hospital in the city. This is a comfortable situation.

Getting the 16,000 beds was not an easy task and we had planned ahead. Had there been a need for 80,000 beds, we would have arranged that too. The CM (Arvind Kejriwal) had said, keep three

times as many beds ready as the number of cases in the city – for 1,000 patients in the hospitals we wanted 3,000 beds ready and for 5,000 patients 15,000.

At present, our occupancy is less than a third of the hospital beds available, so we do not need to scale up the beds further. We will maintain this for some time. The numbers are

definitely going down, but I think it is too early to say whether the cases have peaked. Even if you see the trends in the US, a month ago it had started declining but now look at the situation there – the highest number of cases are being reported from there. It is very difficult to predict anything about this virus. If today, I say that it's over, the cases might start

going up from tomorrow. And, when we had predicted a sharp increase, it went down.

We have received some donations, but I would like to appeal to all those who have recovered from the infection to come forward and donate plasma. They can save someone's life. I will donate my plasma once I get the doctors' nod.

The sero-surveillance tells us how many people in the population have already had the infection. What we have learnt is a huge number of people have had it. But the results of the survey will be declared by the central government's NCDC (National Centre for Disease Control).

First, let us find out the number. Then, we will see what to do. However, I think treatment is the most important. At this time, we should leave the other things and focus on treating Covid-19 just like any other ailment.

Whenever doctors asked me how I was feeling, I said I was absolutely fine. The doctors used to laugh that I never said I wasn't fine. Two days after I was moved out of the ICU (intensive care unit), I came home. The doctors had said that I should stay at the hospital, but I said when I am not in the ICU, staying in the hospital or at home was the same. Even after coming back home, I needed oxygen daily. It has just been three days since I haven't needed it. Oxygen is very important when it comes to this disease. And, I think pranayam helps. My oxygen saturation was dipping even after I came home; when I spoke to the doctors they asked me to try pranayam. I started doing it around 12 days back and there has been an impact. So, all the people – those who have the infection and even those who don't – should do pranayam.

I think the water-logging at Minto Bridge was because the BJP (Bharatiya Janata Party) people deliberately closed the drain in front of the BJP headquarters.

They had done it last year as well and we had to get it opened up. Why else would the water not drain out despite having four pumps working there?

Apart from that, about 1,500 pumps – including mobile pumps – have been deployed across the city.

Yesterday, Delhi received about 80-90mm rainfall within two hours – that is about 15% of the total annual rainfall of the city.

This means Delhi got two months' worth of rain in two hours.

This is the reason there was water-logging in some places. But all the water across Delhi was drained out – even from Minto Bridge – within two hours. Five years ago, this would have taken two days.

Delhi cabinet okays doorstep delivery of ration

Our Correspondent

New Delhi/July 21

The Delhi government on Tuesday approved doorstep delivery of ration to eligible beneficiaries, chief minister Arvind Kejriwal announced, adding that the scheme will be fully implemented in the next six-seven months.

"The Delhi cabinet today cleared the scheme on doorstep delivery of ration. It will be named Mukhyamantri Ghar-Ghar Ration Yojana. Under the scheme, ration will be processed, packed and delivered at the doorstep of beneficiaries," said Kejriwal in a video press briefing.

The CM said the scheme will take another six months to be put in place as that is the time needed to float tenders and engage agencies which would help in implementation.

Kejriwal further said with this scheme the Delhi government will also implement the central government's 'one nation, one ration card' policy, which makes the whole

ration system more portable, especially for beneficiaries who migrate between states.

This flagship scheme of the Aam Aadmi Party government has been in the pipeline for more than two years.

Delhi currently has around 7.5 million ration beneficiaries and 2,028 designated fair price shops, government records show.

That ration beneficiaries, the CM said, will have to choose between doorstep delivery and the traditional way of collecting ration from the designated fair price shops. "Those who opt for the doorstep scheme will get processed flour instead of wheat," said Kejriwal, calling the scheme a "revolutionary step" in governance. He further said, "Along with the doorstep delivery of ration scheme, we will also implement the central government's scheme of one nation one ration card."

The Delhi government was supposed to launch the

doorstep ration delivery scheme in March 2018 but could not do so because of administrative issues. "Later, in 2019, the government initiated a pilot project of doorstep delivery in around five (out of 272) municipal wards in the city and some glitches were identified. All issues have been resolved now and we are in a position

to launch the scheme at the earliest," said a senior official in the food and civil supplies department who did not wish to be identified. The Delhi government, on Monday, directed all fair price shops in the city to update their contact details and Aadhaar number for the doorstep ration delivery scheme to be implemented. The order,

which HT has seen, further said the government also shops in Delhi and also to agents who would deliver the monthly ration to the doorstep of card holders. The process includes entering the ration card number into the device, followed by the biometric (fingerprint scanning) of the beneficiary or entering the Aadhaar card details. Once the details are matched with the database, the ration is disbursed to the beneficiary. The Delhi government had stopped using e-PoS since April 2018, in the light of large number of complaints concerning inconvenience in availing ration owing to technical glitches that also entailed a tussle between the elected government and top bureaucrats in the food department. "By now, we have got all e-PoS machines checked and the technical glitches have been resolved. Delhi has 100% Aadhaar seeding of its ration card holder. We can start using e-PoS again.

e-PoS devices are to be given to all the 2,028 fair price shops in Delhi and also to agents who would deliver the monthly ration to the doorstep of card holders. The process includes entering the ration card number into the device, followed by the biometric (fingerprint scanning) of the beneficiary or entering the Aadhaar card details. Once the details are matched with the database, the ration is disbursed to the beneficiary. The Delhi government had stopped using e-PoS since April 2018, in the light of large number of complaints concerning inconvenience in availing ration owing to technical glitches that also entailed a tussle between the elected government and top bureaucrats in the food department. "By now, we have got all e-PoS machines checked and the technical glitches have been resolved. Delhi has 100% Aadhaar seeding of its ration card holder. We can start using e-PoS again.

Nearly 1 in 4 Delhiites exposed to Covid-19: Sero-survey data

Our Correspondent

New Delhi/July 21

As much as 23.48% of Delhi's population or a whopping 4.7 million people have been exposed to the virus that causes Covid-19, according to the Union health ministry's data from a sero-prevalence survey released on Tuesday. "The results of the sero-prevalence study show that on an average, across Delhi, the prevalence of IgG [Immunoglobulin G] antibodies is 23.48 %. The study also indicates that a large number of infected persons remain asymptomatic," the health ministry said in a statement. The ministry had commissioned a sero-surveillance study in Delhi, which has a population of about 20 million, and it was jointly conducted by the National Centre for Disease Control (NCDC) and the Delhi government. It was done following a rigorous multi-stage sampling study design between June 27 and July 10. Experts in community medicine say that since the samples were collected in end-June and the beginning of July, there is a possibility more people may have developed antibodies against the virus by now. "This is suggestive of infection during mid-June, and since then, we have seen a decent increase in the number of cases. That means more people are exposed to the virus, and the disease prevalence could be higher," said Jugal Kishore, head of the community medicine department of Safdarjung Hospital. "Also, it wasn't a door-to-door sample collection, that also means about 5% to 10% of the population probably was missed. If you factor in all these variables then the prevalence should easily be around 40%, which is good." He added, "It also means the susceptible population is going down, which suggests that the epidemic is moving downwards towards its end." Survey teams were formed for all the 11 districts of Delhi, and blood samples were collected from 21,387 individuals. The samples were tested in labs for Immunoglobulin G (IgG) antibodies. IgG is the most common antibody in blood and other body fluids that the immune systems produces to protect against bacterial and viral infections and allergens.

Our Correspondent

New Delhi/July 21

More than 23% of Delhi's 1.9 crore population showed evidence of past exposure to Sars-Cov-2, which causes the coronavirus disease, in almost six months and that a large number of infected people remain asymptomatic, the result of the sero-prevalence study conducted in the national capital shows.

The Union health ministry said in a statement that 21,387 samples were collected in accordance with laboratory standards and were tested between June 27 and July 10 to determine the extent of the spread of the coronavirus disease in Delhi.

"Nearly six months into the epidemic, only 23.48% of the people are affected in Delhi, which has several pockets of dense population," the Union health ministry, which commissioned the study, said in a statement.

The seroprevalence study was conducted jointly by the National Center for Disease Control (NCDC) and the Delhi

government "following a rigorous multi-stage sampling study design."

Blood samples were taken from randomly selected people as part of the survey, which involves rapid tests for antibodies, to study the scale of undetected infections. The samples were tested to ascertain the population-level presence of the IgG antibody, which indicates past infection.

"This can be attributed to the proactive efforts taken by the Government to prevent the spread of infection including prompt lockdown, effective containment and surveillance measures, including contact tracing and tracking, as well as citizen's

compliance to COVID Appropriate Behaviours," the health ministry said in the statement.

The ministry, however, warned that a significant proportion of the population is still vulnerable. "Therefore, the containment measures need to continue with the same rigour. Non-pharmacological interventions such as physical distancing, use of face mask/cover, hand hygiene, cough etiquette and avoidance of crowded places etc, must be followed strictly," it added.

A diagnostic method, serological tests are used to identify antibodies, which are created by the immune system when someone is infected with the virus, and antigens in a person's blood.

Serology (antibody) tests are largely used for surveillance among communities and can be used on people who have already been tested positive for the virus or even those who are asymptomatic.

Epidemiologists often use serological surveys to

determine who has antibodies and find out who has been infected with the virus, even if someone never reported a positive test or experienced symptoms. A serological survey includes IgG Enzyme Linked Immunosorbent Assay (ELISA) test. It can determine the proportion of the population exposed to Sars-Cov-2 infection. The IgG test is not useful in detecting acute infection but it indicates episodes of infections that has happened in the past. The test is approved by ICMR for its high sensitivity and specificity. The Indian Council of Medical Research (ICMR) had conducted a pilot sero survey across 83 districts in 21 states in May. The results showed that the percentage of the general population to have been infected in the past was 0.73%, with urban areas having shown higher Covid-19 prevalence of about 1.09%. Delhi, which has overtaken Mumbai as the worst-affected city in the country, has 123,747 infections so far and 3,663 people have succumbed.

Engineers survey 200-year-old Old Delhi mosque which was damaged in rain

MM BUREAU

New Delhi/July 21

A team of engineers on Monday surveyed the 200-year-old Masjid Mubarak Begum in Old Delhi's Hauz Qazi chowk, whose central dome was reduced to rubble due to heavy rain a day ago.

Technicians and engineers of the Delhi Waqf Board, which maintains the mosque, said the loss is "irreparable" in terms of its heritage. Entry to the prayer hall beneath the dome has been restricted. Prayers were offered in the courtyard on Monday.

"It is tough to reach the roof, which has become vulnerable, and collect the rubble. The rubble has not been cleared as we are waiting for it to be inspected by experts, whom we are trying to get in touch with. We will

preserve the malba (rubble) for research and see if it could be used for restoration," Mehfooz Mohammad, section officer, Delhi Waqf Board, said.

Mohammad said it was not just the lightning and rainfall that led to the damage, but the dome and the roof had started developing cracks over the past few years.

"For the past few years, cracks were observed here, which could possibly be

because of construction carried out discreetly by shopkeepers on the ground floor and also because of digging work for construction of a Delhi Metro station. During the digging work, many old structures, including houses, had developed cracks," said Mohammad.

The official said the board has contacted the Archaeological Survey of India's Delhi chapter to seek its expertise and help

in restoration. "We plan to write to ASI-Delhi formally tomorrow to help us. We do not have any experts or architects within the board as such and would like to appeal to conservation agencies if they would like to come forward to help us with the task," he said.

Officials from ASI, Delhi said the mosque does not come under their purview.

According to historian Rana Safvi, the double-storied mosque was built in 1822 and is one of the many mosques built by women in that era.

Heritage activist and author Sohail Hashmi said the mosque has historical and architectural importance. "The 1958 Act under the provisions of which the ASI functions needs to be amended to bring all such

structures of immense historical importance under its purview. The mosque requires the attention of experts, who could lead its restoration," said Hashmi.

Hashmi said historically it is important as it was built by a courtesan at that time. Mubarak Begum was a courtesan married to David Ochterlony, the first British resident in Delhi in the Mughal court.

The mosque was mentioned in the list of 3,000 heritage structures that existed in Delhi, which was prepared in 1920 by historian Maulana Zafar Hasan for the then British-ruled ASI to study.

"She was the senior-most of the 13 wives of the British resident. She was sharp and ambitious and Ochterlony would often seek her advice

in various matters," he said.

The design of the mosque is similar to those from the times of Shah Jahan. "The design would typically have three domes, of which the central dome is larger than two others. The structure needs to be preserved well to retain its heritage value," Hashmi said.

Abu Sufyan, a local who runs a group named 'Purani Dilli Walo ki Baatein', which conducts heritage walks and cultural programmes in the area, said, "The mosque was not being maintained properly for years. It had been developing cracks from long before but it wasn't looked into even once. I have got many messages from random people asking to contribute money for repair. We will help as much as we can to restore it," said Sufyan.

Tributes to Mangeram Garg Ji on his death anniversary

New Delhi/July 21

Delhi BJP President Shri Adesh Gupta today offered flowers on the portrait of former Delhi BJP President Shri Mangeram Garg Ji and paid tribute on his death

anniversary at Pradesh Office. On this occasion, Leader of Opposition Shri Ramvir Singh Bidhuri, MP Smt. Meenakshi Lekhi, State General Secretary Shri Rajesh Bhatia, State Organization General Secretary Shri Siddharthan, State Secretary Shri Sanjeev Sharma, Najafgarh District Co-incharge Shri Satish Garg, State Office Secretary Shri Girish Sachdeva, Media Head Shri Ashok Goel Devraha also paid floral tributes to Shri Mangeram Garg Ji and remembered him.

On this occasion, Shri Adesh Gupta said that the work and policies made by former state president Shri Mangeram Garg Ji for the development and expansion of the organization and Delhiites is unforgettable. Shri Mangeram Garg ji has been an invaluable contribution in strengthening the organization in Delhi. He said that Shri Mangeram Garg ji selflessly worked at the grassroots level and improved the lives of many people through various social service initiatives.

His life dedicated to the service of the public still inspires all karyakartas.
