Dear Madam,

First Hole in Main Target at Jampang Returns 20m at 2.79 g/t Gold

- Hole JADD10 returned **20 metres at 2.79 g/t gold** from 34.6m.
- New drill results confirm validity of existing historical gold intersections.
- Drilling to define Lipi gold deposit underway.
- Hole JADD9 returned **4m at 1.18 g/t gold** from 147m at Lipi North.

The Directors of Augur Resources Ltd ('Augur' or 'the Company') are pleased to advise that the results from the first diamond drill hole in the main Lipi zone within the Central Jampang Gold project in south-western Java have been received.

JADD10 was drilled with the aim of confirming gold mineralisation at the main Lipi target. The results returned significant gold mineralisation with **20m at 2.79 g/t gold from 34.6m** depth. The results support historical results which indicated extensive shallow gold mineralisation within the Lipi prospect. Gold in hole JADD10 is associated with a strongly silicified hydrothermal breccia.

Augur has commenced further drilling in the Lipi zone with the aim of defining a JORC compliant resource by late 2010.

The Lipi gold zone had historically been identified over 600m in strike length with the mineralisation open to the south and at depth. Interpretation by Augur suggested that the mineralisation may exist further north than previously defined. Drilling by Augur during 2010 has confirmed that gold mineralisation exists further to the north at the Lipi North prospect (previously reported hole JADD8 returned 10m at 7.47 g/t gold). This has been further supported by the drilling of hole JADD9 which intersected **4m at 1.18 g/t gold and 12.12 g/t silver from 147m**.

The Lipi Zone looking to the south.

Current Activities

Augur is currently focussed on the Lipi prospect.

The drilling of hole JADD13 is underway. Core from holes JADD11 and JADD12 are currently awaiting analysis.

A detailed ground magnetic survey will commence this week with the aim of defining additional drill targets, in particular to the east and west of the Lipi mineralisation.

Augur has planned a detailed drill program with the aim of defining an initial JORC compliant resource by late 2010. The resource is expected to include mineralisation within the Lipi and Puteran-Simpang prospects.

Augur is also planning for a substantial RC drilling program to test a number of geophysical and geochemical anomalies outside of the known areas of mineralisation. This program is expected to commence in the near future.

JADD7	Lipi North	675141	9215050	50	90	52	53	1	3.02	
JADD8	Lipi North	675161	9215062	50	90	73	83	10	7.47	6.44
		and				138	140	2	1.50	13.65

Assaying has been completed by PT Intertek Utama Services, a subsidiary of Intertek Group Inc. Independent standards and/or blanks are used in each sample batch at approximately 20m intervals. Mineralisation cut-off is 0.5g/t gold with a maximum dilution interval of 2 metres. Silver results for JADD10 have yet to be received.

The information in this ASX announcement referring to First Hole in Main Target at Jampang Returns 20m at 2.79 g/t Gold is based on information compiled by Augur staff and contractors and approved by Mr Grant Kensington, who is a Member of the AusIMM.

Mr Kensington is an employee of Augur Resources Ltd and has had sufficient experience relevant to the styles of mineralisation and the type of deposit under consideration and to the activity which he is undertaking, to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Kensington consents to the inclusion in the report of matters based on his information in the form and context in which it appears.

JAMPANG GOLD PROJECT

The Jampang gold project is located approximately 150 kilometres south of Jakarta.

Location of the Central Jampang Gold Project, West Java, Indonesia.

The general geology of the area consists of Miocene/Oligocene andesite and dacite rocks overlain by recent volcanic tuffs. Historical mapping and drilling, indicates that gold bearing veins consistent with epithermal or mesothermal style mineralisation exist in the area.

Whilst the area covered by the IUPs (Izin Usaha Pertambangan or mining business licences) has undergone historical gold mining, limited modern exploration has been conducted with the exception of a three year program undertaken between 1996 and 1998 by Canadian mining company Mispec Resources Inc ('Mispec').

Mispec identified a major structural trend with numerous gold occurrences and zones of significant alteration within the project licence area. Mispec drilling focused on a large alteration zone at Cigaru which covers the northern half of the licences and contains the Lipi and Puteran-Simpang gold prospects. Mineralisation identified by the historical drilling remains open at depth and along strike.

Furthermore, Mispec undertook geophysical surveys subsequent to their main drilling program and identified anomalies associated with the known mineralisation and four additional anomalies which either have not been drill tested or have had only limited drill testing.

Augur Resources has a 2 year option to purchase 90% of PT Golden Pricindo Indah, the company holding the licences covering the central Jampang Gold project.

For further information, please contact Grant Kensington on +61 2 9300 3310.

Yours sincerely

Grant Kensington
Managing Director
