CSA Global Appointed Admiral Bay Technical Consultants

- **Appointment of CSA Global as Technical Consultants to the Admiral Bay Due Diligence**
- **Significant Geological and Mining Consulting expertise across all base metals**
- **Over 30 years' experience specifically with zinc deposits**
- **Due Diligence work commenced immediately**

PLD Corporation Limited (**ASX:PLD**) ("**PLD**" or "**the Company**") is pleased to announce it has appointed CSA Global Pty Ltd ("**CSA Global**") as technical consultants to assist the Company during the due diligence period for the proposed acquisition of the world-class Admiral Bay Zinc Project located in the Canning Basin, Western Australia.

The Company recently signed an Option Agreement with Kagara Ltd (in liquidation) (Kagara) to acquire the project, which is considered one of the world's more significant undeveloped zinc deposits, via a combination of cash and shares (please refer to ASX announcement dated 30 October 2014). PLD has access to a comprehensive exploration, development and mining database which has had A\$35+ million invested to date.

CSA Global is an international geological, mining and management consulting company which provides multi-disciplinary services across the mining life-cycle in the minerals industry. CSA Global has been providing specialist consulting advice on carbonate-hosted zinc deposits for over 30 years. CSA Global's specialist expertise in carbonate-hosted zinc systems draws on direct experience in most of the significant Mississippi Valley Type (MVT) and Irish-type districts globally, including the Irish Midlands, Silesia (Poland), the Atlas (Tunisia, Algeria and Morocco), central and southeast Turkey, Viburnum Trend and Tennessee (USA), Canning and Bonaparte Basins, including the Lennard Shelf (Western Australia), and southwest China.

CSA Global's key technical people have in-depth technical expertise in the geology of MVT systems and basinal mineral systems, including exploration, resource estimation, mining and project optimisation. CSA Global's experience encompasses broad scale work assessing base metal systems in basinal environments, including tectonic evolution, structural basin architecture, palaeogeographic and facies analysis, fluid flow and alteration, through to all aspects of economic geology including mineral resource and ore reserve estimation, mining grade control, sampling studies and mining project evaluation.

Commenting on the appointment, PLD Managing Director Matt Gauci said:

"CSA Global brings world class technical and management expertise to the PLD team which will enable a greater understanding of the key challenges in developing the Admiral Bay Project, which we consider to be a potential Tier 1 Zinc project, located in the world-class mining jurisdiction of WA."
