ASX ANNOUNCEMENT

ASX: ASN

Anson Appoints Technical Advisor

Anson Resources Limited (Anson) is pleased to announce the appointed Tom Currin of Southwest Technologies as a Technical Advisor.

In addition to his current engagement designing Anson's pilot plant for the extraction of lithium chemicals, Mr Currin will advise Anson on the development of Anson's flowsheet from the pre-treatment of raw brine to the integration of processes for the extraction of lithium and other chemicals.

The appointment of Mr Currin as Technical Advisor will provide a comprehensive overview for optimising the extraction of multiple chemical products from brine sourced from Anson's Paradox Brine Project leveraging his significant experience in brine processing.

Anson has received ad-hoc consultancy services from Mr Currin over the past 4 months. Mr Currin successfully produced the 1kg lithium carbonate sample from the lithium chloride eluate extracted by Lilac Solutions from the Paradox brine, see announcement 3rd June, 2019.

The sample was tested by a Chinese cathode manufacturer which confirmed the electric vehicle battery grade specifications, see announcement 30th July, 2019. Mr Currin is currently involved in the production of the 20kg sample of lithium carbonate that will be offered to additional potential customers.

Mr Currin formerly worked for FMC Corporation (a lithium producer) for 12 years and has been involved in the design and construction of five lithium carbonate pilot plants worldwide. Mr Currin has an extensive global network of business contacts in the chemical extraction and production field, particularly in the United States.
