Avira Resources Ltd (ASX: AVW) (**Avira** of the **Company**) is pleased to provide the following update on recent progress at its Mt Cattlin Gold Project (**Project**) in Western Australia, with two solid milestones achieved and an active exploration program on the near horizon.

Land Access Agreement — Maori Queen Deposit

Avira has formalised a Land Access and Compensation Agreement (**Agreement**) with the landowner on whose property the Maori Queen gold deposit is partially situated. The Agreement is an important step in Avira's lead-up to Phase 1 drilling and reflects the Company's commitment to maintaining respectful, constructive relationships with landowners and key stakeholders.

Database Validation and Development — Nearing Completion

Avira is finalising a comprehensive validation and development of the Mt Cattlin Gold Project drilling database, drawing on a thorough review of historical reports, multiple legacy databases, and all available geochemical and geotechnical records.

The integrated database now captures collar, survey, lithology, alteration, mineralisation, veining and geotechnical data across both the Maori Queen and Sirdar gold deposits — standardised, validated, and ready to underpin the near-term active exploration programme.

This is meaningful work. A clean, validated database is the foundation on which reliable drill targeting and ultimately the Company's first independent Mineral Resource Estimate, will be built. Upon completion of this integration, the Company will use the planned Phase 1 drilling programme to target previously recognised and newly identified extensions to the known mineralisation at Maori Queen and Sidar. Further opportunities to expand the Project are also expected at multiple other prospects.

Permits and Exploration Timeline

Avira's Programme of Work (PoW) approval remains pending with the DMPE, with a response expected in the coming weeks. Subject to receipt of all relevant permits and approvals, the Company expects to commence Phase 1 of its exploration program at Mt Cattlin in early Q2 2026.

Executive Director James Robinson commented: *"The database validation work may not grab headlines, but it's the kind of rigorous groundwork that good exploration is built on. Getting the land access formalised and the database properly validated means we're heading into our first planned drilling campaign on solid ground. Both Maori Queen and Sirdar are shaping up as genuinely exciting gold projects and the potential to grow the Company's gold base across the Mt Cattlin Gold Project is, in our view, highly encouraging. The next few months are going to be an important period for the Company and we're well placed to deliver exciting results as the Project develops."*

For, and on behalf of, the Board of the Company, and authorised for release.

James Robinson
Executive Director
Avira Resources Limited

About Avira Resources Limited

Avira Resources Limited (AVW) is an ASX listed mining exploration company exploring for gold, copper and base metals with projects in Western Australia and Sweden.

The Mt Cattlin Gold Project, located within the highly endowed Ravensthorpe Greenstone Belt of the Yilgarn Craton, is a high-priority gold-copper asset. The project's close proximity to the world-class Rio Tinto's Mt Cattlin Lithium Mine and Medallion Metals' 1.3Moz Kundip Gold Project validates its district-scale potential. Following completion of the acquisition announced on 20 October 2025, AVW holds 100% of the gold and non-pegmatite mineral rights over Exploration Licence E74/401. Multiple advanced prospects, including Ellendale, Plantagenet and Revival, exhibit strong gold-copper geophysical and geochemical signatures within favourable magnetic skarn zones, representing immediate, drill-ready targets for resource delineation.

The Tangadee Project currently consists of three granted exploration licences E52/4411 E52/4439 and E52/4413 for a total of 249 blocks or 779 km^2 located in the Ashburton region of Western Australia which straddles the faulted contact between the Edmund and Collier Basins in the Capricorn Orogen of Western Australia. Avira is targeting sediment-hosted Cu-Zn sulphide and magmatic Cu-Ni sulphide deposits, principally by drill testing late-time EM conductors (VTEM) that lie either on or close to the intersection of the major, east-trending Mount Vernon Fault and NE and NW trending splays and linking structures.

The Puolalaki Project currently comprises a single exploration permit (Puolalaki nr 100) centred over a synorogenic gabbro intrusion that hosts the nickel mineralisation discovered by NAN in 1998. In addition to the Ni-Cu-Co mineralisation at Puolalaki, the project also contains significant, high-grade gold mineralisation across two zones within the metasediments and metavolcanics surrounding the gabbro. The project is located in Sweden's premier Gällivare mining district which is host to Europe's largest open-cut copper mine Aitik, owned by Boliden and to LKAB's Malmberget iron-ore mine.

Forward looking statements

This announcement contains forward-looking statements which are identified by words such as 'may', 'could', 'believes', 'estimates', 'targets', 'expects', or 'intends' and other similar words that involve risks and uncertainties. These statements are based on an assessment of present economic and operating conditions, and on a number of assumptions regarding future events and actions that, as at the date of this announcement, are expected to take place. Such forward-looking statements does not guarantee future performance and involve known and unknown risks, uncertainties, assumptions and other important factors, many of which are beyond the control of the Company, the directors and our management. We cannot and do not give any assurance that the results, performance or achievements expressed or implied by the forward-looking statements contained in this announcement will actually occur and investors are cautioned not to place undue reliance on these forward-looking statements. We have no intention to update or revise forward-looking statements, or to publish prospective financial information in the future, regardless of whether new information, future events or any other factors affect the information contained in this announcement, except where required by law. These forward-looking statements are subject to various risk factors that could cause our actual results to differ materially from the results expressed or anticipated in these statements.
