

31 January 2020

QUARTERLY ACTIVITIES REPORT PERIOD ENDING 31 DECEMBER 2019

HIGHLIGHTS:

- **First hole (PBD01) drilled in the Pian Bracca Zone defined two stacked lenses, and returned results including:**
 - 9.5% Zn+Pb and 34.1g/t Ag over 10.6m from 36.6m and
 - 16.1% Zn+Pb and 23.4g/t Ag over 2m from 56.9m
- **Diamond drilling contractor, Edilmac, completed the first five holes of the campaign**
- **Mining Licence application completed and submitted to the Lombardy regulators on schedule**
- **Successful \$1.9 million placement to institutional and sophisticated investors**
- **Cash as at 31 December 2019 of c.\$2 million**

Alta Zinc Limited (ASX: AZI) (Alta or the Company) is pleased to provide its Quarterly Activities Report for the period ended 31 December 2019.

Gorno Zinc Project (Lombardy, Northern Italy)

Pian Bracca diamond drilling program – maiden results

During the quarter, Alta commenced a 30-hole diamond drilling program at the Gorno Project targeting the high priority Pian Bracca zone, where recent high-grade channel sampling from access points within the drilling target zone had returned high-grade assays over significant thicknesses (see announcement on 14 October 2019).

In December 2019, Alta announced the maiden results of the campaign. The first two holes were drilled in the central part of the Pian Bracca zone in the vicinity of previous channel sampling. Both holes intersected the Pian Bracca mineralisation over significant thicknesses, and in addition also intersected a highly mineralised lower lens. The results confirmed the thickness and high-grade nature of the mineralisation present in the zone. They substantiated the assay grades obtained from the nearby channel samples of exposed mineralisation, and further, that the mineralisation is continuous both beneath and between the multiple levels of historic development.

Alta Zinc Limited | ASX Code AZI | ABN 63 078 510 988

Level 3, Suite 3.5, 9 Bowman Street, South Perth, WA 6151, Australia

Email: info@altazinc.com | Tel: +61 (0)8 9321 5000 | Fax: +61 (0)8 9321 7177

Website: www.altazinc.com

The mineralisation intersected is highly visible and clearly consists of sphalerite and galena which are hosted within the well-known Metallifero Formation. The Metallifero Formation is found extensively throughout the Gorno district where it is consistently a host to zinc and lead mineralisation. Figures 1 and 2 below show the position of the holes and the mineralisation contained. Figure 3 shows the mineralised core from the lower lens of the second hole, PBD02, which demonstrates the clearly visible zinc sphalerite mineralisation.

Table 1: Drill hole results from PBD01, drilling intersections are angled approximately 70 degrees to horizontal, meaning true thickness is interpreted to be 1.9m & 10.0m respectively

Hole ID	From m	To m	Intercept m	Pb %	Zn %	Pb+Zn %	Ag g/t
PBD01	18.0	20.0	2.0	2.9	13.3	16.1	23.4
PBD01	36.6	47.2	10.6	2.3	7.2	9.5	34.1

Figure 1: Plan view showing the location of the new drill holes (PBD01, PBD02) within the Pian Bracca Zone and the channel samples taken previously (C1-C9)

Figure 2: Long-section through the Pian Bracca zone showing the new drill holes (PBD01, PBD02) central to the previous (C1-C9) channel sample results & the proposed drilling of the zone from the existing access

Figure 3: Core photography of hole PBD02, showing the lower mineralised lens (sphalerite distinctly visible as light brown rock)

Further drilling results from Pian Bracca

Subsequent to the quarter end, on 21 January 2020 Alta announced the results of a further four drill-holes (PBD02 to PBD05) drilled during the month of December. Highlights of these are as follows:

- 12.1% Zn+Pb and 38g/t Ag over 12m from 56.9m (PBD02)
- 14.8% Zn+Pb and 52g/t Ag over 10.7m from 58.0m (PBD03)
- 19.4% Zn+Pb and 60g/t Ag over 12.1m from 59.5m (PBD05)

These drilling results also demonstrate the continuity of a second layer of high-grade mineralisation beneath the Pian Bracca mineralisation, including:

- 19.1% Zn+Pb and 19g/t Ag over 8.5m from 23.4m (PBD02)

While not the focus of the current campaign, the drilling has clearly demonstrated the continuity and high-grade nature of the second layer of mineralisation (Breno) which lies approximately 20m below the Pian Bracca zone. This style of mineralisation was mined historically at the Gorno Project.

Also, a previously unknown third horizon of mineralisation has been discovered above the Pian Bracca thrust, which illustrates the untapped exploration potential of the Gorno Project. Figure 4 is a long section through the Pian Bracca Zone and shows the drilling results.

All holes were drilled upwards from the initial drill pad in the east-central part of the zone. All the holes analysed to date have intersected significant zinc and lead mineralisation. The entire maiden drilling campaign is expected to run until the middle to end of Q2-CY2020 and results will be released on a regular basis as assays become available from the laboratory.

Figure 4: Long-section showing the first five holes of the current campaign & their drilling results

Mining Licence (ML) Renewal Application

Alta has continued to advance the Gorno project's permitting status and as such was pleased to submit on schedule the application for the renewal and expansion of the Company's existing mining licence at Gorno (the Monica Mining Licence). Submission of the application is a significant milestone which demonstrates that the permitting process for the Gorno Project mine is well advanced. The application is highly detailed and contains a full Environmental and Social Impact Assessment and baseline data analysis. The submission included several additional items included at the request of the regulators (the Regional Government of Lombardy). It will now be reviewed, and a process of discussion and analysis will be conducted between the Company and the regulators.

Corporate

Successful completion of oversubscribed Placement to raise c.\$1.9M

On 25 October 2019, the Company announced that it completed a successful Placement to raise c.\$1.9 million at an issue price of \$0.005 per share. The Placement was strongly supported and introduced a number of new, high quality domestic and international investors to the Company's share register. Strategic shareholder Victor Smorgon Group maintained their c.15.7% shareholding, providing strong validation of the Gorno Project and the Company's revitalised brownfield exploration and resource growth strategy.

The Placement included the issue of 342.3 million shares under the Company's existing placement capacity and an additional issue of 30 million shares to Alta's Managing Director, Geraint Harris, to raise \$150K, as approved by shareholders at the AGM on 29 November 2019. The Placement proceeds, together with existing cash reserves, is sufficient to fund the ongoing diamond drilling program at Pian Bracca as well as cover corporate costs and general working capital requirements.

Cash Balance

Cash on hand at 31 December 2019 was \$1.985 million, including the proceeds of the Placement. Please refer to the attached Appendix 5B.

Issued Capital

During the quarter a total of 372,264,417 fully paid ordinary shares were issued pursuant to the Placement, and a total of 75,000,000 unlisted options were issued. As at 31 December, the Company had 2,202,148,728 fully paid ordinary shares on issue and 123,250,000 unlisted options.

Tenements

Current tenement holdings, tenements disposed of and tenements acquired during the quarter are shown in the attached Tables 2 to 4.

By the board of Alta Zinc Limited.

About Alta Zinc Limited

Alta Zinc Limited owns 100% of the historic Gorno Zinc Project, near Bergamo in the Lombardy region of northern Italy. The Company is committed to a strategy to define additional zones of high-grade mineralisation, which will enable development options to be reconsidered at the appropriate time and taking advantage of strong local support, excellent metallurgy, established infrastructure and favourable zinc market conditions. The Bergamo region of Italy has a long history of mining extending back to the Pre-Roman times. The Gorno underground zinc mine ceased operations in the early 1980s following a government directive for its then-owner SAMIM (a state-owned company and part of the ENI group) to focus solely on oil and gas. The Company also holds two ELs in Piedmont, Italy for the Punta Corna Cobalt Project and an exploration portfolio in Australia.

Competent Person Statements

The information in this release that refers to Exploration Results is based on, and fairly represents, information prepared or reviewed by Dr Marcello de Angelis as Competent Person in compliance with the JORC Code (2012 edition) and announced to the ASX on 4 December 2019 and 21 January 2020. The original ASX announcements are available on Alta Zinc Limited's website (www.altazinc.com). The Company is not aware of any new information or data that materially affects the information included in the original ASX announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original ASX announcement.

Notes

- The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose

additional information is encouraged to do so, in a note or notes included in or attached to this report.

2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
