BlinkLab presents at the JMM & ÉTHICA Innovation & Investment Insights Lunch

2 May 2024

BlinkLab Limited (**ASX:BB1**) (**"BlinkLab"**, "the **Company**"), an innovative digital healthcare company developing smartphone-based AI powered diagnostic tests for autism, is pleased to advise that Non-Executive Chairman, Brian Leedman, will be presenting at the Innovation & Investment Insights Lunch in Sydney on 2 May 2024.

A copy of the presentation is attached.

This announcement has been approved by the Board of Directors.

About BlinkLab Limited

BlinkLab, a company founded by neuroscientists at Princeton University, over the past several years has fully developed a smartphone based diagnostic platform for autism, ADHD, schizophrenia, and other neurodevelopmental conditions. BlinkLab's most advanced product is an autism diagnostic test that leverages the power of smartphones, AI and machine learning to deliver screening tests specifically designed for children as young as 18 months old. This marks a significant advancement, considering traditional diagnoses typically occur around five years of age, often missing the crucial early window for effective intervention. BlinkLab is led by an experienced management team and directors with a proven track record in building companies and vast knowledge in digital healthcare, computer vision, AI and machine learning. BlinkLab's Scientific Advisory Board consists of leading experts in the field of autism and brain development allowing us to bridge the most advanced technological innovations with groundbreaking scientific research.

blinklab

Early and accurate diagnosis of autism and ADHD

Using a breakthrough AI-powered smartphone platform

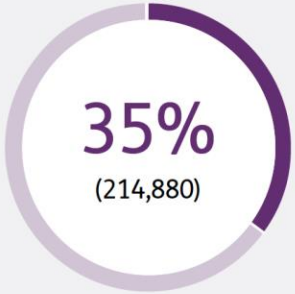
Given these uncertainties, recipients are cautioned not to place reliance on forward looking statements.

Autism summary
June 2023

Insights

As at 30 June 2023:



of the **610,502** active NDIS participants have a **primary disability of autism**, making it the **most common disability for NDIS participants.**

Source: ndis.gov.au

Total payments

In the year ending 30 June 2023:

the NDIS provided

$6.73 billion

of paid supports to participants with autism.

In the previous year:

the NDIS provided

$5.27 billion

of paid supports to participants with autism.

↑ 28%

Autism is a $700B market in 2024 in the US alone

"The economic burden is significant and alarming" [1]

- Autism prevalence has grown to 2-4% among children[2]
- Autism healthcare expenses world-wide are soaring[3]
  - *Costs for an autism diagnostic evaluation: $1,000 to $5,000.*
  - *Costs of care are around **$60K** annually during childhood[3].*
  - *Lifetime cost for individual with ASD: **$3.6M**[3]*
  - *35% of NDIS participants have autism accounting for **$6.7B**[4].*
- No medical autism check available
  - *Autism diagnostic evaluation is **subjective.***

Autism diagnosis is expensive, inaccurate, and too late

Leading to poor developmental and clinical outcomes and high financial costs.

Parental observations

Concerns arise about child's behavior and development.

Autism screening

By primary care physician, who refers to specialist.

12-24 months waitlist

Autism diagnostic evaluation

Formal diagnosis requires input from **multiple disciplines**, including psychiatry, psychology, audiology, occupational and physical therapists. Process is complex, expensive and frequently delayed. Current diagnostic tools are **subjective**.

Diagnosis at age 5-6

Family frustrated by evaluation that took longer than **12 months**.

Late intervention

Yielding **poor clinical results** and leading to **high expenses** later in life.

BlinkLab's digital solution accelerates path to diagnosis

By bringing to market a smartphone platform for **early** and **accurate** autism diagnosis.

Parental observations

Concerns arise about child's behavior and development.

Digital screening

Using our **accessible** smartphone-based platform.

blinklab

Diagnostic evaluation

Using biomarkers. Only necessary specialists are consulted.

Autism
Anxiety
ADHD

Diagnosis at age 2-3

Initial diagnosis **instantaneously**, confirmed in 1-2 months.

Early and personalized intervention and accurate monitoring

Intervention starts early during brain development, yielding **optimal clinical results** and leading to significant **reduction in costs** (40-60%) later in life.

BlinkLab facilitates early diagnosis, reduces costs, and improves accuracy.

Our patented technology: neuroscience on a smartphone

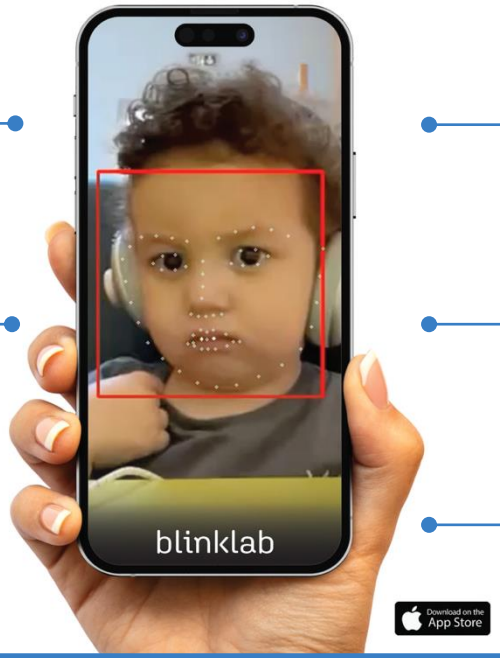
Minuscule facial reflexes, evoked by our app, generate a digital biomarker for autism.

Smartphone-based

Scientifically-proven **neurometric evaluations** conveniently at the home.

Evokes facial reflexes

By presenting visual and auditory stimuli during smartphone use.



Computer vision

Facial features are tracked on the smartphone and transferred to the **BlinkLab platform**.

Biomarker detection

Biomarkers are detected in **real-time** and made available to the clinician.

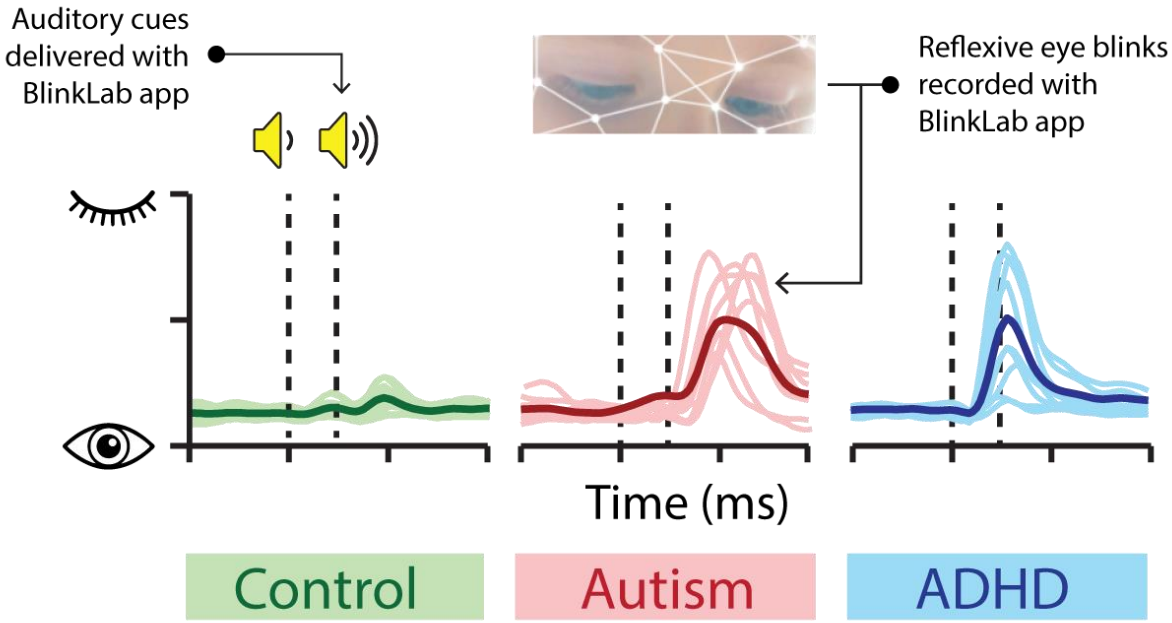
Evaluates brain function

State-of-the art analysis methods and AI modelling are used to **map the functioning of brain regions involved in autism**.

BlinkLab's AI-driven digital platform will address a significant unmet need for cost-effective and precise diagnostic alternatives.

How our AI technology detects autism and also ADHD

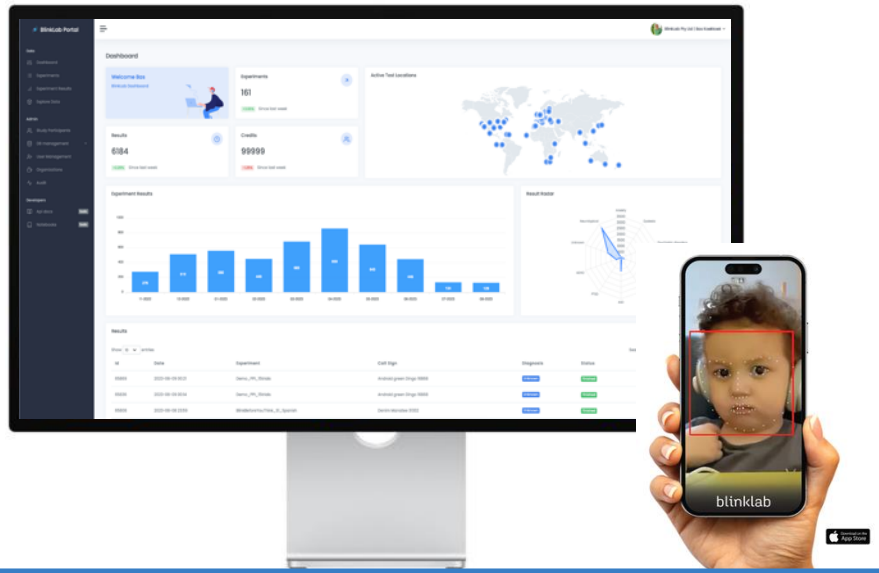
BlinkLab precisely measures the alterations in **sensory sensitivity** in people with autism and ADHD.



BlinkLab is fully developed, field tested, and ready to use

Validated in >6,000 subjects tested globally, including people with limited access to healthcare.

- **Remote testing**
  Enables accessible and global diagnostics.
- **Scalable solution**
  Easily adaptable for clinical and diverse research needs.
- **Real-time analysis**
  Immediate insights in user tests and biomarker scores.
- **Rapid global adoption**
  > 40 scientific and clinical institutes, special schools and, large healthcare providers around the globe already have started implementing BlinkLab (next slide).



BlinkLab is collaborating with world-leading institutions

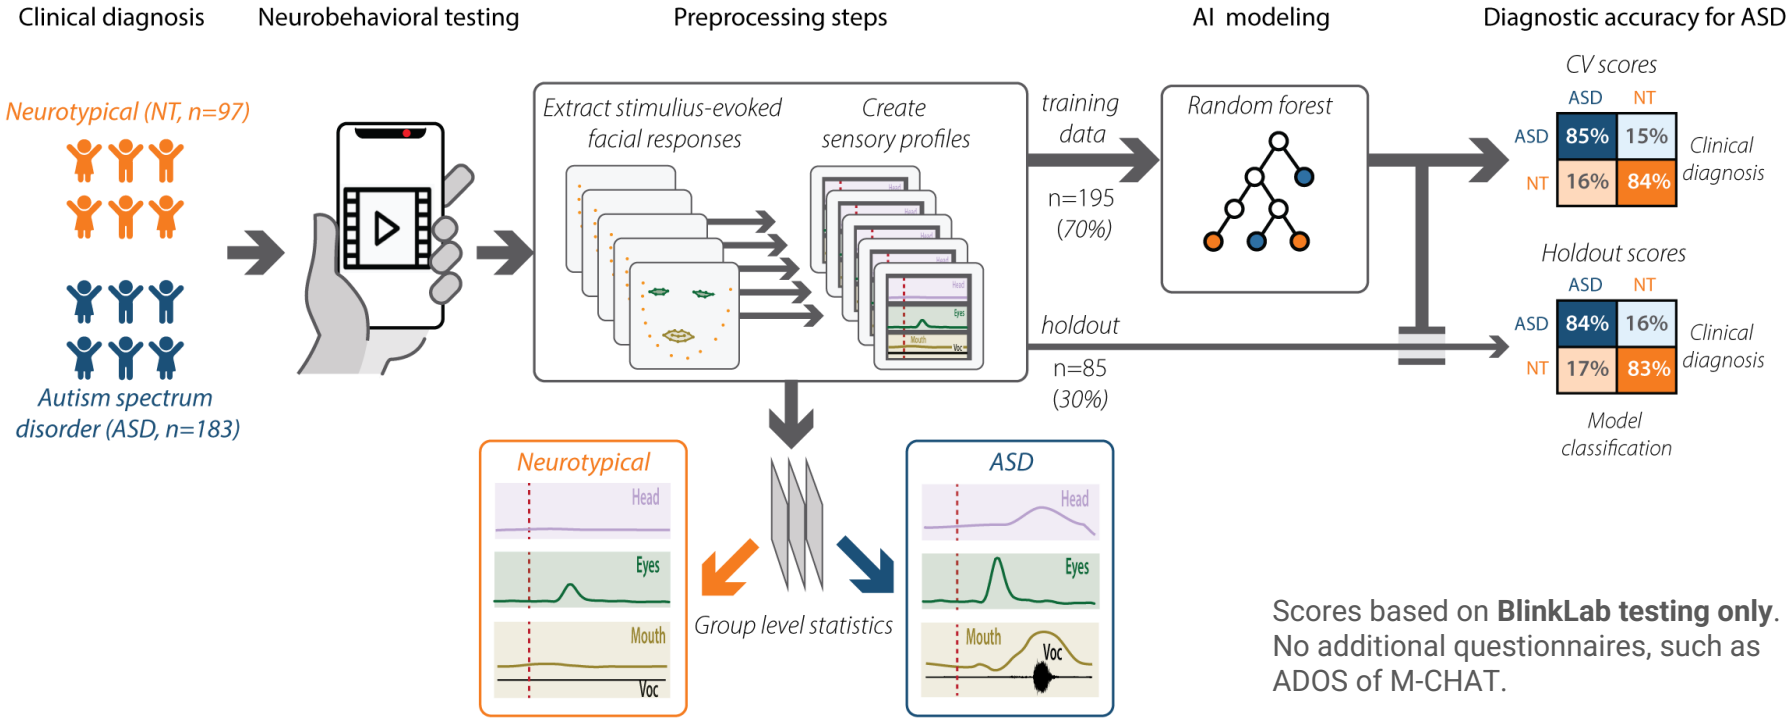
Since our first product launched in 2022, we have established global partnerships with >30 academic and clinical institutes.

Prof. Samuel S. -H. Wang
(Princeton University)

"The BlinkLab app is easy to operate, substantially reduces the costs of diagnosis, and produces reliable and reproducible results."

Breakthrough data from large autism diagnostic study

In our multi-center study in non-European cohort, we attained a **sensitivity of 85%** and **specificity of 84%**



Scores based on **BlinkLab testing only**. No additional questionnaires, such as ADOS of M-CHAT.

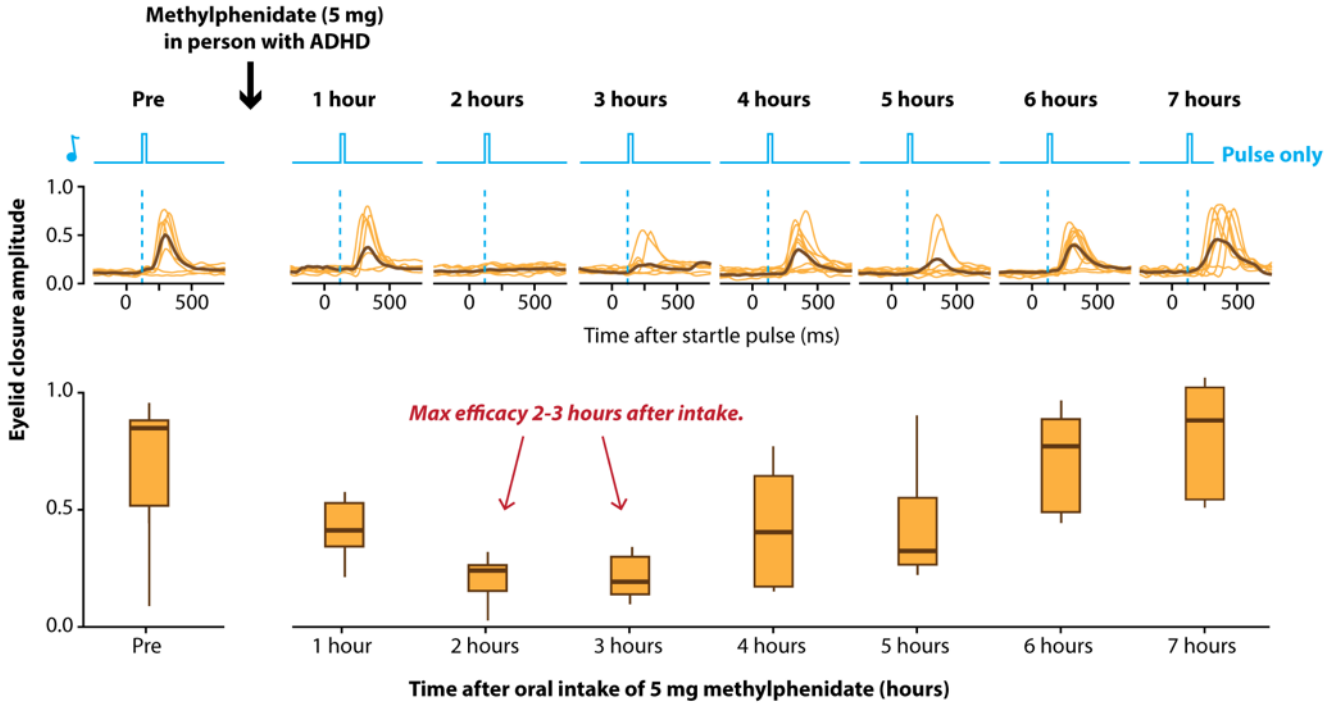
BlinkLab meets standard of care and outperforms FDA-approved digital peers

	blinklab	cognoa	EarliTec Diagnostics Inc.
Sensitivity	**85%**	52%	71%
Specificity	**84%**	19%	81%
Smartphone-based	Yes	Yes	No
FDA approval	Not yet	De novo	510(k)

We are leaders in the rapidly growing space of digital diagnostics **and** therapeutics.

First product to monitor the effect of therapy in real-time

Offers a path to even larger recurring revenues via subscription-based commercial models.



Real-time Ritalin monitoring capability builds path to recurring revenue streams.

We are experts in science, tech and commercialization

Our mission is to use neuroscience to improve the daily life of families with autism.

Henk-Jan Boele, CEO

MD, PhD, Neuroscientist and entrepreneur at Erasmus MC and Princeton University

Fifteen years of experience in neurobehavioral testing with over 35 publications. Recipient of many prestigious awards. Team leader and inventor of BlinkLab.

Anton Uvarov, COO
Executive Director

MBA, PhD, Biotechnology Analyst with Citibank

Cofounder of two biotechnology companies, developed therapeutics for neurodegenerative disorders. Both successfully IPO and publicly traded.

Bas Koekkoek, CSO

PhD, Assistant Professor of Neuroscience. Erasmus MC

Twenty-six years of experience in neurobehavioral testing with over 55 publications in IEEE and the field of neuroscience. An innovator in heart and soul. Cofounder of Neurasmus BV.

Peter Boele, CTO

MA, PhD candidate, Erasmus MC

Born to code, with over 20 years of experience in software development, both as developer as well as executive.

We are backed up by an expert advisory board

World leading scientists and commercial advisors.

Company Chairman

Brian Leedman

Experienced Chairman and co-founder of five ASX listed healthcare companies including digital healthcare company ResApp Health, acquired by Pfizer for $180M in 2022.

Company Director

Jane Morgan

Providing strategic investor and media relations services for over 16 years. Founder of JMM.

Company Director

Richard Hopkins

Experienced bio-pharmaceutical executive with over 20 years in corporate leadership roles with public biotechnology companies.

Scientific advisor

Prof. Samuel Wang

Professor of Neuroscience at Princeton University and author of 2 bestselling books.

Scientific advisor

Prof. Chris De Zeeuw

Professor of Neuroscience at Erasmus MC and vice-director of the NIN (Netherlands Institute of Neuroscience).

Scientific advisor

Prof. Javier Medina

Professor in neuroscience at Baylor College of Medicine in Houston.

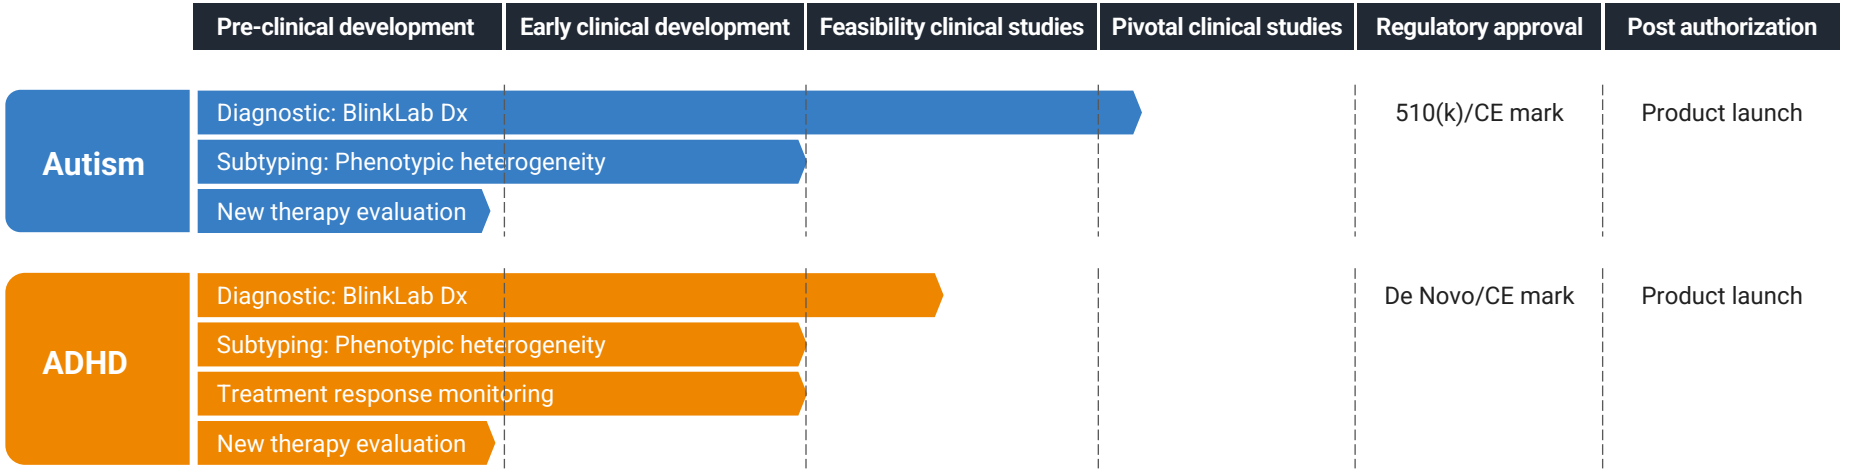
R&D Pipeline

Our pipeline of diagnostic products, relevant development state and regulatory pathway.



For timeline, see slide 23

Important milestones

News pipeline: Updates on regulatory studies on autism ánd ADHD, new partnerships, new opportunities

Milestone	Timeframe
Start of activities for FDA registrational study in autism (appointment of CRO, selection and appointment of clinical sited to do the study, appointment of lead clinical investigator, key opinion leaders)	1H 2024
Initiation of ADHD discovery phase study	*1Q 2024
Completion of Autism study in Morocco / EU	*1Q 2024
Completion of pilot Schizophrenia study (EU)	1H 2024
Initiation of global Schizophrenia study (potentially registrational, tbc depending on pilot study outcome)	2H 2024
FDA registrational study in Autism starts	2H 2024
CE mark submission for Autism (EU)	2H 2024
Completion of ADHD discovery phase study	2H 2024
Completion of pilot saccadometry (sporadic pupil movement) study in Alzheimer's/MCI	2H 2024
CE Mark approval (6 months post submission)	1H 2025
Initiation of FDA registrational study in ADHD	4Q 2024 / 1Q 2025
Initiation of Alzheimers/MCI saccadometry study (potentially registrational tbc depending on pilot study outcome)	4Q 2024 / 1Q 2025
FDA registration study in Autism complete	1H 2025
510k FDA submission is Autism	2H 2025
510k FDA approval in Autism (approx. 6 months after submission)	1Q 2026

*Achieved

Capital Structure

(ASX.BB1) Public Market Overview (1 May 2024)	
Share Price	A$0.31

Intellectual property

Our patents prohibit other parties to conduct neurometric testing using mobile devices.

BlinkLab has consistently prioritized the development and protection of its intellectual property since its seed funding round in August 2021. Our capital investments sourced from seed investors, government funding, and industry sponsorships - have been primarily utilized for IP and software development.

We are represented by the US-based law firm, Meagher Emanuel Laks Goldberg & Liao, LLP, which ensures our IP protection. We have filed National Stage Applications for 2020-2021 patents across various jurisdictions including the United States, Japan, Canada, Australia, Korea, and the European Patent Office (EPO) in March 2023.

Our portfolio comprises patents filed both by Princeton University, under an exclusive license agreement, and BlinkLab itself. These patents range from systems for neurobehavioral testing to methods for measuring emotional engagement, all of which firmly establish our innovation and leadership in the field.

Patents filed by Princeton University, with an exclusive license agreement in place between Princeton University and BlinkLab:

- PCT application number PCT/US2021/058698 Filed November 10, 2021, entitled “System and Method for Remote Neurobehavioral Testing”
- US patent application number 18/036,009 Filed May 9, 2023, entitled “System and Method for Remote Neurobehavioral Testing”
- European patent application number 21892692.1 Filed March 31, 2023, entitled “System and Method for Remote Neurobehavioral Testing”
- Japanese patent application number 2023-528017 Filed May 10, 2023, entitled “System and Method for Remote Neurobehavioral Testing”
- Canadian patent application number 3,195,596 Filed April 13, 2023, entitled “System and Method for Remote Neurobehavioral Testing”
- Korean patent application number 10-2023-7018839 Filed June 2, 2023, entitled “System and Method for Remote Neurobehavioral Testing”
- Australian patent application number 2021378273 Filed May 23, 2023, entitled “System and Method for Remote Neurobehavioral Testing”

Patents filed by BlinkLab:

- US Provisional patent application number 63/218,607 Filed on November 30, 2022, entitled “Psychopharmacological System and Method Using Eyelid Tracking”
- US Provisional patent application number 63/460,451 Filed on April 19, 2023, entitled “Method And System For Measuring Emotional Engagement”
- US Provisional patent application number 63/548,542 Filed on February 1, 2024, entitled “System And method For Detecting Neurological Condition”
