About BluGlass: BluGlass Limited is an Australian green technology company developed to commercialise a breakthrough in the Semiconductor Industry. BluGlass has invented a new process using Remote Plasma Chemical Vapour Deposition (RPCVD) to grow semiconductor materials such as gallium nitride (GaN) and indium gallium nitride (InGaN), crucial to the production of high efficiency devices such as next generation lighting technology Light Emitting Diodes (LEDs) with significant low cost potential. BluGlass has established a Joint Venture with SPTS, a global supplier of advanced capital equipment and process technologies for the semiconductor industry. BluGlass, through its subsidiary, BluSolar is now exploring the process' viability in photovoltaic (solar) applications. The BluGlass process is a low temperature and low cost technology with the potential for scalability. Contact: Stefanie Winwood 02 9334 2300 swinwood@bluglass.com.au
