

Bulletin Resources is the 100% owner of the Nicolson's Gold Project located near Halls Creek in the Kimberley region of Western Australia. The project has a combined open pit and underground Mineral Resource of 1 million tonnes at 5.20g/t Au (for a total of 169,500 ounces) and a 120,000 tpa processing facility currently under care and maintenance.

June 2011 Quarter Activities Report

28 July 2011

Summary of June Quarter 2011 activities:

- **More than 8,000m of reverse circulation (RC) drilling completed at Nicolson's. Highlights include;**

NRC11031: 4.0m at 11.8 g/t Au from 127m

NRC11033: 3.0m at 8.5 g/t Au from 130m

including 1.0m at 19.4 g/t Au

NRC11041: 7.0m at 22.8 g/t Au from 138m

including 4.0m at 38.8 g/t Au ; and

NRC11044: 2.0m at 14.1 g/t Au from 137m

NRC11044: 3.0m at 11.7 g/t Au from 75m

including 1.0m at 26.4 g/t Au

NRC11060: 8.0m at 9.2 g/t Au from 232m

including 1.0m at 53.2 g/t Au

- **Project team commences evaluation of mining options in parallel with drilling program.**
- **Successful condition testing of the 120,000 tpa gold processing facility.**

Bulletin Resources Limited ("Bulletin") (ASX:BNR) is pleased to present its quarterly activities report for the period ended 30 June, 2011. During the quarter Bulletin completed 8,315m of reverse circulation (RC) drilling at its Nicolson's Gold Project near Halls Creek in WA. High grade mineralisation was successfully intersected beneath the former open pit within 3 lodes. Continuity of the Main Lode was confirmed to a vertical depth of at least 200m.

Development activities during the quarter included the assessment of options for both surface and underground mining. Restart and condition testing of the 120,000 tpa gold processing facility commenced in late June with all major components successfully energised and mechanically tested.

Bulletin's Managing Director, Marty Phillips, said: "This quarter has seen Bulletin's exploration and development activities accelerate rapidly, despite unforeseen delays from the prolonged wet season".

"We are very pleased with the high grade results to date and progress made on the mining concept study and condition testing of the gold processing facility".

Marty Phillips
Managing Director

1. DRILLING PROGRAMME

- During the June 2011 quarter, 8,315m of reverse circulation (RC) drilling was completed at the Nicolson's Find and Nicolson's South deposits.
- Drilling at Nicolson's Find successfully confirmed the presence of at least 3 high grade, north-plunging, en-echelon quartz-carbonate rich veins extending below the former 50m deep Nicolson's open pit (Figures 1 - 3). The high grade gold mineralisation has now been confirmed to a vertical depth of circa 200m and remains open down-plunge. A full list of drilling results is included in Table 1. Best results include:

NRC11031: 4.0m at 11.8 g/t Au from 127m

NRC11033: 3.0m at 8.5 g/t Au from 130m

including 1.0m at 19.4 g/t Au

NRC11041: 7.0m at 22.8 g/t Au from 138m

including 4.0m at 38.8 g/t Au ; and

NRC11044: 2.0m at 14.1 g/t Au from 137m

NRC11044: 3.0m at 11.7 g/t Au from 75m

including 1.0m at 26.4 g/t Au

NRC11060: 8.0m at 9.2 g/t Au from 232m

including 1.0m at 53.2 g/t Au

- Drilling at Nicolson's South was mainly aimed at assessing the up-plunge potential of the high grade lode mineralisation for mine planning purposes. A full list of drilling results is included in Table 2. While host structures were intersected in several holes, no significant gold results were returned. The highly weathered nature of the host rocks at Nicolson's South suggests the possibility for supergene depletion within the shallower levels of the deposit.
- More encouraging indications have been returned from the limited results received to date from holes targeting extensions to the Nicolson's South lode at depth and include:

NRC11014: 4.0m at 5.0 g/t Au from 129m; and

3.0m at 9.2 g/t Au from 135m

- The 11,500 metre RC drilling program is scheduled to conclude in late July following completion of the holes planned for the Rowdies, Wagtails and Shifty's open pit targets. An update of the resource model will proceed immediately upon receipt of all outstanding assay data and in advance of a formal mining development study scheduled for commencement during the forthcoming quarter.

2. PROJECT DEVELOPMENT ACTIVITIES

- A conceptual desktop mining study was carried out during the quarter to assess the mining development options for Nicolson's. In advance of detailed geotechnical studies, Bulletin's project team investigated various open pit and underground development options.

- Condition testing of the 120,000 tpa processing facility began on 25 June with Bulletin successfully re-energising the power station and mechanically testing the plant equipment (crushing circuit, conveyors, ball mill and leaching circuit). The outcome of the condition test will form part of the scope and cost for refurbishing and returning the processing facility back to full operation.

3. CORPORATE

- At 30 June 2011, Bulletin had \$7.91 million in cash.
- During the quarter, Mr Mick Fitzgerald was appointed to the position of Executive Director Operations. Mick has 38 years of practical mining experience and will head up the Nicolson's Project operations team. He was previously the owner of mining contracting company Alliance Mining Pty Ltd, and has accumulated many years' experience working for Apex Minerals, Barmenco Limited and Barrick Gold Corporation.

Notes to Tables

¹Drilling and assay results in Table 1 and 2 are down-hole intervals compiled using a 1.0 g/t Au lower cut with no internal dilution unless noted. No upper cut value has been applied to the assay results.

²True intersection widths are estimated to be 60 to 80 % of down-hole intersection widths. All holes are drilled with a dip of -60° and azimuth of 270° to grid unless otherwise indicated. Holes NRC11044 and NRC11048 are extensions of historical holes.

³Drill samples were analysed using a 40 gram fire assay with AAS finish.

⁴Zones are mineralised zones. They are denoted as Hanging Wall (HW); Main (Main) and Footwall (FW) for the Nicolson's Find and Nicolson's South deposits.

⁵Holes NRC11044 and NRC11048 are extensions of historical holes.

⁶Hole NRC11060 includes 1m of > 0.5 g/t internal dilution within the reported interval.

Figure 2: Long section showing approximate location of Nicolson's footwall zone drill intersections superimposed on gram-metre contours

Figure 3: Long section showing approximate location of Nicolson's hanging wall zone drill intersections superimposed on gram-metre contours

About Bulletin Resources

Bulletin Resources holds a 100% interest in the Nicolson's Gold project which comprises a contiguous mineral tenement holding covering approximately 70km² in the Kimberley Region of WA. The project is estimated to host an Indicated Resource of 787,900 tonnes at 5.05g/t Au for approximately 127,800 ounces of gold and an Inferred Resource of 234,200 tonnes at 5.54g/t Au for approximately 41,700 ounces of gold. Also located on the project is a 120,000 tpa processing facility currently under care and maintenance. The principal objective of the company is to advance the project to the stage of decision to mine.

Prospect	Category	Tonnes	Grade (g/t Au)	Ounces
Nicolson's	Open pit Indicated	657,800	5.03	106,400
	Open pit Inferred	54,600	5.50	9,700
	Total open pit	712,400	5.07	116,100

Competent Persons statement

The Information in this report that relates to the interpretation of Exploration Results and Mineral Resources has been based on information compiled by Mark Csar. Mark Csar is a Fellow of the Australian Institute of Mining and Metallurgy and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity they have undertaken to qualify as a Competent Person as defined in the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code 2004). Mark Csar is a full-time employee of Bulletin Resources Limited and consents to the inclusion in this report of the matters based on his information in the context in which it appears.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
