ASX ANNOUNCEMENT - PRESS RELEASE

DIGITAL RADIOLOGY SYSTEM OPERATIONAL AT
THE ROYAL PERTH HOSPITAL

Following the recent announcement of the first sale in Australia of an IDC Xplorer 1700 direct capture Digital Radiography system and a McKesson (formerly ALI Prodigy) radiology reporting workstation, Integra Medical Imaging (IMI) is pleased to announce the system is now operational at the Royal Perth Hospital. The system was signed off for acceptance by the Department of Radiology on 24th October.

The radiologists with special interest in chest diseases and the Chief Medical Imaging Technologist were instrumental in choosing the equipment. The Chief Medical Imaging Technologist signing off on the acceptance document commented. "I was impressed with the efficiency and professionalism of the installation engineers and the training provided by the IMI Applications specialist. The Royal Perth Hospital radiologists have reported the initial images show superior dynamic range to film based chest X-rays. We are looking forward to a full PACS implementation throughout the hospital to gain the benefits of this exciting new medical imaging technology."

IMI wishes to thank staff at the Royal Perth Hospital for their patience and support during the delivery and installation process.

The conclusion of the sale to Royal Perth Hospital represents the first sale of an IDC Xplorer 1700 in Australia. This system, developed by Imaging Dynamics Corporation of Canada, is at the forefront of world digital radiography. The establishment of a successful reference site in Australia should provide the catalyst for significant additional sales of this highly advanced digital capture imaging technology throughout Australia.

For And On Behalf Of The Board

RICHARD REVELINS
Director
