Harris Corporation and BSA TS Deliver TRuepoint™ for Data and Video to Digital Distribution Australia

RESEARCH TRIANGLE PARK, North Carolina, February 22, 2005 – Harris Corporation (NYSE:HRS), a leading global provider of wireless equipment and services, and Broadcast Services Australia Limited (ASX:BSA) Transmission Services, Australia's leading turnkey equipment and services supplier for both broadcast and telecommunications service providers, today announced that Digital Distribution Australia (DDA) has purchased Harris' TRuepoint™ next-generation microwave radio for use in its network. DDA, which works with some of the largest service providers in Australia, acts as a "carrier's carrier," delivering managed bandwidth services for video, data and voice to carriers nationwide over its custom-built broadband network.

"As a provider of wholesale bandwidth to regional carriers across Australia, we needed to create a network that was capable of serving a diverse set of service provider customers with very exacting demands," stated Peter Lambourne, DDA's Managing Director. "As a result, we needed wireless infrastructure that could provide broadcast quality video, as well as data, for a varied set of markets and with a high level of reliability for the exacting standards of service providers. Harris and BSA TS were able to provide industry-leading technology combined with the service and support that allowed us to get up and running quickly."

DDA purchased Harris TRuepoint, the industry's first universal platform for point-to-point digital communications, through BSA TS. TRuepoint will augment DDA's extensive wireless telecommunications network, which spans the east coast of Australia. DDA plans to offer a wide variety of data and broadcast-quality video through this network. Together, BSA TS and Harris Microwave will offer DDA a complete, end-to-end solution for wireless infrastructure including installation and ongoing support.

"Deployments like those with DDA are a perfect example of the flexibility of the TRuepoint platform," said Mike Haines, Harris Microwave Communications Division's director of Global Channels. "Instead of optimizing its network infrastructure for just one market, carriers like DDA must meet the rigorous demands of many service providers serving many different markets. TRuepoint gives them the performance and flexibility to do so profitably."

DDA's purchase also highlights the relationship between Harris Microwave and BSA TS. Harris and BSA TS signed a distribution agreement in December 2004, in which BSA TS distributes Harris microwave products through its extensive network of Australian broadcaster and service provider customers.

About TRuepoint™

TRuepoint leads the wireless backhaul industry in both performance and manageability. Its modular, software-selectable architecture is able to seamlessly switch between PDH and SDH applications, enabling service providers to use a universal platform to deliver multiple applications throughout their networks. Designed specifically for point-to-point wireless applications, TRuepoint can deliver service from 4 to 180 Mbps at frequencies ranging from 6 to 38 GHz. In addition, service providers can completely manage TRuepoint deployments remotely with SNMP-based management. The TRuepoint platform also provides built-in diagnostics and performance management capabilities.

About Harris Microwave Communications Division

Harris Microwave Communications Division, one of four divisions within Harris Corporation, is the largest supplier of microwave systems in North America and a leading supplier worldwide. Harris Corporation is an international communications technology company focused on providing *assured communications*™ products, systems and services for government and commercial customers. The company's operating divisions serve markets for government communications, tactical radio, broadcast and microwave systems. Harris provides systems and service to customers in more than 150 countries. Additional information about Harris Corporation is available at www.harris.com.

About BSA

Broadcast Services Australia Limited (ASX: BSA) has two divisions: 1) Contracting Solutions (BSA CS), which is Australia's largest provider of domestic and commercial satellite installations for the subscription TV industry. BSA CS also provides high-volume contracting services to the telecommunications industry and; 2) Transmission Solutions (BSA TS), which is a major turnkey equipment and infrastructure services supplier to the broadcast industry. BSA TS represents some of the world's best broadcast equipment and its engineering department has an outstanding reputation in the broadcast industry.
