

Advancing the world class Julimar PGE-Ni-Cu-Co-Au discovery

Australian Nickel Conference

5 October 2021

Forward looking statements and competent person(s) disclosure

This presentation does not include all available Information on Chalice Mining Limited and should not be used in isolation as a guide to investing in the Company. Any potential investor should also refer to Chalice Mining Limited's Annual Reports, filings on [sedar.com](https://www.sedar.com), ASX/OTCQB releases and take independent professional advice before considering investing in the Company. For further information about Chalice Mining Limited, visit our website at [chalicemining.com](https://www.chalicemining.com)

Not an offer in the United States This presentation does not constitute an offer to sell, or a solicitation of an offer to buy, securities in the United States or any other jurisdiction. Any securities described in this announcement have not been, and will not be, registered under the US Securities Act of 1933 and may not be offered or sold in the United States except in transactions exempt from, or not subject to, registration under the US Securities Act and applicable US state securities laws.

Forward-Looking Statement

This document may contain forward-looking information, including forward looking information within the meaning of Canadian securities legislation and forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 (collectively, forward-looking statements). These forward-looking statements are made as of the date of this document and Chalice Mining Limited (the Company) does not intend, and does not assume any obligation, to update these forward-looking statements. Forward-looking statements relate to future events or future performance and reflect Company management's expectations or beliefs regarding future events and include, but are not limited to, the Company's strategy, the completion of the intended demerger, the estimated timing of drilling in the Julimar State Forest, the fair value of investments ultimately realised, the estimation of mineral reserves and mineral resources, the realisation of mineral resource estimates, estimation of metallurgical recoveries, the forecast timing of the estimation of mineral resources, the likelihood of exploration success at the Company's projects, the prospectivity of the Company's exploration projects, the existence of additional EM anomalies within the Julimar Project, the forecast timing of the completion of the Gonneville Scoping Study, the timing of future exploration activities on the Company's exploration projects, planned expenditures and budgets and the execution thereof, the timing and availability of drill results, potential sites for additional drilling, the timing and amount of estimated future production, costs of production, capital expenditures, success of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as "aiming", "could", "deposit", "emerging", "estimate", "exceptional", "favourable", "forecast", "highly", "interpreted", "likely", "needed", "planned", "potential", "prospects", "ongoing", "robustness", "significant", "targeted", "unrivalled", "world class" or variations of such words and phrases or statements that certain actions, events or results may, could, would, might or will be taken, occur or be achieved or the negative of these terms or comparable terminology. By their very nature forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such factors may include, among others, risks related to actual results of current or planned exploration activities; assay results of soil samples; whether geophysical and geochemical anomalies are related to economic mineralisation or some other feature; obtaining appropriate access to undertake additional ground disturbing exploration work on EM anomalies located in the Julimar State Forest; the results from testing EM anomalies; results of planned metallurgical test work including results from other zones not tested yet, scaling up to commercial operations; changes in project parameters as plans continue to be refined; changes in exploration programs and budgets based upon the results of exploration, future prices of mineral resources; grade or recovery rates; accidents, labour disputes and other risks of the mining industry; delays in obtaining governmental approvals or financing or in the completion of development or construction activities; movements in the share price of investments and the timing and proceeds realised on future disposals of investments, the impact of the COVID 19 epidemic as well as those factors detailed from time to time in the Company's interim and annual financial statements, all of which are filed and available for review on SEDAR at [sedar.com](https://www.sedar.com), ASX at [asx.com.au](https://www.asx.com.au) and OTC Markets at [otcmkt.com](https://www.otcmkt.com). Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.

Disclaimer

Whilst care has been exercised in preparing and presenting this presentation, to the maximum extent permitted by law, the Company and its representatives:

- Make no representation, warranty or undertaking, express or implied, as to the adequacy, accuracy, completeness or reasonableness of this Presentation;
- Accept no responsibility or liability as to the adequacy, accuracy, completeness or reasonableness of this Presentation; and
- Accept no responsibility for any errors or omissions from this Presentation.

Competent Person and Qualifying Persons Statement

The Information in this presentation and the interactive 3D model that relates to exploration results for the Julimar Project is extracted from the following ASX announcements:

- "High-grade nickel-copper-palladium sulphide intersected at Julimar Project in WA", 23 March 2020
- "Preliminary results from second target at Julimar Project", 24 March 2020
- "Significant nickel-palladium discovery confirmed at Julimar", 15 April 2020
- "Second diamond hole intersects discovery zone at Julimar", 20 April 2020
- "Exciting visual results from deep diamond drill hole at Julimar", 5 May 2020
- "Large-scale PGE system further expanded at Julimar", 11 May 2020
- "High-grade Ni-Cu-PGEs confirmed in discovery zone at Julimar", 25 May 2020
- "Extension of wide, high-grade PGE-Ni-Cu matrix zone at Julimar", 15 June 2020
- "Chalice discovers new high-grade PGE-Cu-Au zone at Julimar", 9 July 2020
- "Significant extension of high-grade PGE-Ni-Cu-Co zones at Julimar", 17 August 2020
- "Positive preliminary metallurgical results at Julimar", 1 September 2020
- "Major new 6.5km-long EM anomaly identified at Julimar", 22 September 2020
- "Significant new PGE-copper-gold horizon defined at Julimar", 6 October 2020
- "Key Private Properties Secured at Julimar", 16 November 2020
- "Significant high-grade PGE-Cu-Au extensions at Julimar", 18 November 2020
- "Chalice secures access to major new targets at Julimar", 4 January 2021
- "Four new high-grade zones defined as Julimar continues to grow", 27 January 2021
- "More positive results from ongoing metallurgical testwork at Julimar", 16 February 2021
- "New EM Conductors and Nickel-Copper Soil Anomalies at Hartog", 25 March 2021
- "Resource drilling at Julimar delivers further growth in high-grade zones", 22 April 2021
- "Extensive Ni-Cu Soil Anomalism at Julimar" 9 June 2021
- "Resource drilling continues to define continuous high-grade zones at Julimar", 2 July 2021
- "Twelfth High-Grade Zone Defined at Julimar", 2 August 2021
- "Gonneville High-Grade Zones Extended at Depth", 28 September 2021

The Information in this presentation that relates to exploration results for the Pyramid Hill Project is extracted from the following ASX announcements:

- "First Diamond Drill Hole at Karri Hits Primary Gold Zone" 7 April 2020
- "Large gold system confirmed at Karri, Pyramid Hill", 29 July 2020
- "Chalice announces intention to demerge gold assets", 12 July 2021

The Information in this presentation that relates to exploration results for the Hawkstone Project (formerly the King Leopold Project) is extracted from the following ASX announcements:

- "Chalice acquires highly prospective nickel sulphide project in west Kimberley region of WA", 18 June 2019
- "Strong EM Conductors Identified at King Leopold Project", 20 August 2019

The above announcements are available to view on the Company's website at [chalicemining.com](https://www.chalicemining.com). The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant original market announcements. The Company confirms that the form and context in which the Competent Person and Qualified Person's findings are presented have not been materially modified from the relevant original market announcements.

This announcement is authorised for release by the Disclosure Committee.

A unique exploration specialist **with a globally significant discovery**

Julimar – a new high-grade PGE-Ni-Cu-Co-Au sulphide discovery in WA

- Australia's first major palladium discovery
- Emerging as a **world-class, strategic** deposit of **critical, 'green metals'** in a world-class jurisdiction
- Highly leveraged to **battery** (Ni-Cu-Co) and **hydrogen** (PGEs-Ni) technology adoption

Demerger and IPO of highly prospective Australian gold projects¹

- **>5,000km²** Pyramid Hill Gold Project in **Bendigo Zone** of Victoria – several new high-grade gold zones undercover
- 'Falcon Metals' Demerger and IPO planned in **Q4 2021**

Well funded, high performance team with an excellent track record

- Proven ability to discover and define **mines**
- **~A\$116M²** in cash + investments
- **~4,000% TSR** since Julimar discovery in March 2020

¹ Subject to shareholder and regulatory approvals ² As at 30 June 2021

Julimar is a 'green metals' discovery

These metals are needed to **decarbonise the global economy and address climate change**

Palladium

Highly versatile but rare metal used to remove nitrogen oxides (NOx) from exhausts / hydrogen / ammonia streams. NOx are **300x more potent than CO₂ as a greenhouse gas**

~11Moz p.a. palladium market in deficit for nine consecutive years; supply dominated by Russia

Nickel

The key battery cathode material in EVs, **high nickel NMC 811 batteries are the favoured chemistry**

EV-driven nickel demand is forecast to increase **19x by 2040**; lack of new sulphide discoveries worldwide in recent years has created a significant forecast supply shortage

Copper

Used extensively in the green energy industry including in **renewables, energy storage and EVs**

Copper demand is forecast to outstrip supply by mid-2021; lack of new large-scale discoveries worldwide

Platinum

Highly effective catalyst (similar to Pd) in **hydrogen applications, including green hydrogen production and fuel cells**

Ongoing deficit and supply challenges; supply dominated by South Africa

Julimar Nickel – Copper-PGE Project

Western Australia

High-grade PGE-Ni-Cu-Co sulphide was intersected in the very first drill hole at Julimar – a **remarkable new discovery** in a new province

- Greenfield project staked in early 2018 (**100% owned**)
 - First drill hole in March 2020 intersected **25m @ 8.5g/t Pd, 0.9g/t Pt, 0.1g/t Au, 2.0% Ni, 0.9% Cu, 0.11% Co from 46m**
 - Discovery made ~70km NE of Perth – named Gonneville
 - Gonneville is at the southern end of a **>26km** long, unexplored layered mafic-ultramafic complex (the Julimar Complex)
 - Gonneville discovery made on private farmland; remaining **~24km of strike** along the Julimar Complex yet to be drilled (access pending)
 - **>8,000km²** of new licence applications since the discovery in the **new West Yilgarn Ni-Cu-PGE Province** → leveraging our competitive advantage to make additional discoveries
 - Favourable location with direct access to **major highway, rail, power, port infrastructure** as well as **large local workforce**
-
- Gonneville discovery being advanced rapidly in parallel to initial regional exploration (**area almost totally unexplored for Ni-Cu-PGEs**)

The exceptional Gonneville PGE-nickel-copper-cobalt-gold sulphide discovery is just the first along a **>26km long intrusive complex**

Gonneville is emerging as a **world class, strategic deposit of critical metals**, with a range of PGE-Ni-Cu-Co-Au mineralisation styles

Drill holes

- RC – new
- DDH – new
- RC – previous
- DDH – previous

Mineralisation

- >0.3g/t Pd
- >1.0g/t Pd
- >0.5% Ni+Cu
- Oxide >0.5g/t Pd
- New key intersection

Geology (chronological order)

- Sediments
- Gonneville Intrusion
- Granite
- Dolerite

Julimar Nickel-Copper-PGE Project

Gonneville Intrusion Plan View – key new drill results over simplified geology at 160m RL
24 September 2021

- >1.9km x 0.9km x 0.8km intrusion, **open to the north and at depth**, hosting:
 - 13 shallow **high-grade PGE-Ni-Cu-Co+/-Au sulphide zones** (G1-G13, using >1g/t Pd cut-off) – 11 remain open
 - >250 high-grade (>1g/t Pd) sulphide intersections outside the 13 high-grade zones
 - Widespread **PGE-Ni-Cu mineralisation associated with disseminated sulphides** (0.5-2.0g/t PGEs+Au) surrounding the high-grade zones
 - Widespread **Pd-rich oxide zones** (0.8-1.5g/t Pd) from surface to a depth of ~25m
- ~600 holes for ~155,000m completed to date – **resource modelling underway**

Immediately north of Gonneville, the Hartog Target is the highest priority within the **>26km long Julimar Complex** – drilling targeted in early Q4 2021

Hartog

- ~6.5km long gravity-AEM anomaly
- ~30 ground EM conductors and multi-kilometre scale Ni-Cu soil anomalies, comparable to Gonneville pre-discovery
- Coherent Cr soil anomaly – interpreted as mafic-ultramafic geology

Baudin-Jansz-Torres

- Multiple gravity-AEM anomalies
- Multi-kilometre scale Ni-Cu soil anomalies
- Drilling planned on farmland in Q4 2021

Note: Drilling targeted in early Q4 2021, subject to access approvals

Preliminary met testwork shows **high Pd-Pt-Ni-Cu-Co recoveries** into two commercially attractive concentrates using conventional flotation

Simplified sequential flotation process for high-grade sulphide mineralisation

- Testwork to date demonstrates potential to produce **two commercially attractive concentrates** for sale
- **Low levels of potentially deleterious elements** (As, Cd, Se, Te, Hg, Pb, F, Cl) in concentrates produced to date
- Variability testwork continues and additional metallurgical sampling underway

Metal	Expected Recovery (%)
Copper (to Cu-PGE-Au con)	80-90
Nickel & Cobalt (to Ni-Co-PGE con)	60-75
Palladium (to both cons)	75-85
Platinum (to both cons)	65-75
Gold (to Cu-PGE-Au con)	35-75

Simplified flotation process for disseminated sulphide mineralisation

- Initial testwork indicates the potential to produce two commercially attractive concentrates for sale
- Several processing alternatives to enrich bulk Ni-Cu-Co-PGE concentrate being investigated in order to maximise recovery and smelter payability
- **\$2.9M CRC-P grant** from Commonwealth Govt to evaluate downstream processing options in 2021-2023
- Testwork and flowsheet development work continues ahead of **Scoping Study, targeted for completion in H1 2022**

Initial drilling at Hartog in early Q4 and maiden Mineral Resource Estimate in mid Q4 represent **significant upcoming milestones**

¹ Conservation Management Plan – a plan outlining Chalice's proposed exploration approach within the Julimar State Forest. ² Access to the Julimar State Forest for drilling activities has not yet been granted. The Company continues to engage with relevant government entities to progress its CMP approval and the above timeline is an estimate only

The Julimar Project has the potential to deliver **significant jobs, skills and economic diversification** to the Wheatbelt region of WA

Environment

- Numerous case studies of **successful mining projects in or around State Forest areas in WA** (Boddington, Alcoa WA, Worsley, Greenbushes)
- Chalice has taken a **proactive approach to environmental practices**
 - Baseline flora, fauna, heritage and dieback surveys completed on farmland
 - Flora, fauna, heritage and dieback surveys completed in Hartog-Baudin areas of the Julimar State Forest,
 - Further flora-fauna surveys planned in northern end of the Julimar State Forest
- Planning **low-impact drilling techniques** within the Julimar State Forest (small footprint diamond rigs) which **do not require any vegetation clearance**

Community

- Proximity to major communities provides a unique opportunity to build a **workforce of local permanent residents (drive in, drive out)**
- **Growing employment opportunities** – operations already having positive economic impact on local and surrounding economies
- Community Fact Sheets and Newsletters developed to deliver information on environment, community consultation, exploration licences and exploration activities
- **Active, open and transparent engagement** continues with key stakeholders
- Growing **community funding** to achieve long term positive impacts

The Julimar discovery has kick-started the new West Yilgarn Ni-Cu-PGE Province, which could deliver **more major discoveries**

- Many of the **'giant' Ni-Cu-PGE sulphide** deposits such as Norilsk, Jinchuan, Thompson and Voisey's Bay are located proximal to the margin of Archean age cratons
- The western margin of the Yilgarn craton (Archean) is almost **entirely unexplored** for these mineral systems
- We made the first discovery (Julimar), so were able to stake a **>8,000km² licence area** along this western margin
- **Hundreds** of potential intrusions already identified within our licence area
- Large-scale Ni-Cu-PGE soil anomaly already identified at Barrabarra (**~300km north of Julimar**) – AC drilling planned in Q4 2021
- MLEM to recommence at South West in Q4 2021
- Initial airborne EM surveys over remaining Julimar and new Barrabarra areas in Q4 2021
- An exciting new province with the potential for **several major nickel sulphide discoveries** in the years ahead

Investment Highlights

Our PGE-Ni-Cu-Co-Au discovery at **Julimar** is emerging as a **world class, strategic deposit** of critical, 'green metals' in Western Australia

Significant exploration upside from the untested ~24km of Julimar Complex and our dominant position within the new West Yilgarn Ni-Cu-PGE Province

A major discovery and new mineral province being advanced rapidly, ~A\$116M¹ in cash and investments and a team with an **excellent track record**

¹ As at 30 June 2021

Level 3, 46 Colin Street
West Perth WA 6005, Australia

¹ As of 31 August 2021 (estimate based on top 20 extract of the share register)

² As of 30 June 2021

Chalice has been one of the **standout performers** in the sector, with a **~4,000%** TSR since the Julimar discovery

ASX:CHN (A\$/share)

Since our 2006 IPO, we have acquired quality assets, advanced projects quickly and generated **>A\$110M in after-tax proceeds¹** from asset sales

¹ As of 15 June 2020

Chalice's portfolio includes the exciting **Julimar discovery** in the new West Yilgarn Ni-Cu-PGE Province in WA + a pipeline of generative opportunities

Julimar Nickel-Copper-PGE Project, WA

- 1 • **New** greenfield PGE-Ni-Cu-Co sulphide **discovery** in Mar-2020
- **25m @ 8.5g/t Pd, 2.0% Ni, 0.9% Cu, 0.11% Co** in 1st hole
- 100% owned, **>26km long intrusive complex** ~70km NE of Perth
- Targeting maiden Mineral Resource in mid Q4 2021

Pyramid Hill Gold Project, Vic

- 2 • **New >4km gold** trend + 3 gold bearing diorite intrusions
- **>5,000km²** holding NW and NE of **Fosterville Gold Mine**
- 100% owned, all under cover in unexplored terrane
- Intention to demerge w/ other gold projects in Q4 2021

Hawkstone Nickel-Copper-Cobalt Project, WA

- 3 • **New** greenfield nickel sulphide opportunity in frontier province
- **~1,600km²** holding east of Merlin Ni-Cu-Co prospect (IGO/BUX)
- 85-100% owned, several large untested dolerite intrusions

+ *Several generative exploration opportunities, investments, royalties and non-operated joint ventures*

Board of Directors

Tim Goyder, Chairman

- 40+ year industry veteran with track record of success as an investor, entrepreneur and company director
- Founder and **largest shareholder** of Chalice (~11%)

Alex Dorsch, Managing Director and Chief Executive Officer

- Diverse experience in consulting, engineering and corporate advisory in the energy and resources sectors
- Previously a Specialist with McKinsey & Company

Morgan Ball, Lead Independent Non-Exec Director

- Chartered Accountant with 25+ years experience in the resources, logistics and finance industries
- CFO of Northern Star Resources

Stephen Quin, Non-Exec Director

- Mining geologist with 35+ years mining and exploration experience in Canada and across the globe
- Formerly President and CEO of Midas Gold Corp

Garret Dixon, Non-Exec Director

- 30+ years experience in resources and mining contracting sectors
- Formerly Executive VP Alcoa & President Bauxite

Stephen McIntosh, Non-Exec Director

- Highly regarded mining executive with 30+ years experience in exploration, major project studies and execution
- Formerly Group Executive and Head of Exploration at Rio Tinto

Linda Kenyon, Non-Exec Director

- Corporate lawyer and senior executive with 30+ years experience
- Formerly Company Secretary and member of Executive Leadership Team at Wesfarmers

Derek La Ferla, Independent Non-Executive Director

- Highly regarded ASX200 chair and company director
- Chair at Sandfire and Poseidon Nickel
- To succeed Tim Goyder as Chair following the AGM in Nov 2021 (subject to shareholder approval)

The Team

Management

Richard Hacker, CFO

- Chartered Accountant with 20+ years experience in junior company financing, corporate and commercial management
- Company CFO since 2006

Dr Kevin Frost, GM Exploration

- Co-recipient of AMEC's Prospector of the Year Award in 2009 for the discovery of the Spotted Quoll nickel sulphide deposit in WA (Western Areas)

Bruce Kendall, GM Development

- Co-recipient of AMEC's Prospector of the Year Award in 2012 for the discovery of the world-class Tropicana gold deposit in WA (AngloGold Ashanti)

Michael Elias, Study Manager – Julimar

- Study Director with 30+ years experience in mining sector
- Specialist in study management, project development and management consulting

Dr Soolim Carney, GM Environment and Community

- Environment, health and safety, indigenous affairs, govt relations and community specialist with 20+ years experience
- Former Regional Environment Manager for Alcoa Australia

Chris MacKinnon, Business Development and Legal Manager

- 15 years experience as a corporate lawyer and finance advisor in the resources industry

Jamie Armes, Company Secretary

- Chartered Accountant with 20+ years experience within the accounting profession and administration of public listed companies in the mining and exploration industry

Sustainability	 Deliver a sustainability strategy based on responsible practices and shared value. Maintain our social licence to operate	 Build trust-based and inclusive relationships with our external stakeholders. Increase engagement and investment with the communities in which we operate to achieve long term positive impacts	 Define comprehensive baseline environmental standards for the Julimar Project	
Generative Exploration	 Make another major 'green metal' discovery within the portfolio	 Unlock new targets and insights within the new West Yilgarn Ni-Cu-PGE Province		
Project Definition	 Define a maiden JORC Mineral Resource Estimate for the Gonneville PGE-Ni-Cu-Co-Au Deposit	 Secure access to the Julimar State Forest for initial low-impact drilling	 Assess and define the processing flowsheet alternatives for the various mineralisation styles at Gonneville	 Deliver a Scoping Study for initial stage of development at Gonneville, advancing the project to maximise shareholder value and optionality
Business Development	 Complete proposed gold demerger to deliver a standalone, ASX-listed gold company targeting tier-1 discoveries in VIC and WA	 Evaluate and acquire synergistic assets to complement our portfolio		
People and Culture	 Continue to build our team with a focus on internal resourcing. Nurture our culture of ownership, sustainable success and ideation	 Preserve our generative exploration capability whilst continuing to build a core project study team		

We are aiming to **define Julimar to maximise value and optionality**, continue to **build trust with our key stakeholders** and **leverage our discovery**

We are aiming to **define Julimar to maximise value and optionality**, continue to **build trust with our key stakeholders** and **leverage our discovery**

The **palladium price has surged** with the introduction of China 5/6 emissions standards and the switch from Pt to Pd based catalytic converters

- **Palladium is a very versatile but rare metal**
- Demand currently dominated by ICE catalytic converters
- Tightening emissions standards (particularly on NO_x emissions) has led to Pd based catalysts being preferred since 2006
- Tighter emissions standards have already been flagged by Europe
- Hybrid BEV catalytic converters require **higher metal loadings** than ICEs
- Palladium has **widespread applications in a green hydrogen economy**, including:
 - Green hydrogen production using proton-exchange membrane electrolyzers
 - Hydrogen or ammonia purification (scrubbing of NO_x)
 - Storage and detection
 - Fuel cells
- Hence palladium (along with the other PGEs) is becoming a strong focus in **green hydrogen adoption**

Pyramid Hill Gold Project

Victoria

Why gold in Victoria? The prospect of finding another **Fosterville Gold Mine**

>60Moz Au produced since 1850's from outcropping **South Bendigo Zone**, at a avg grade of ~15g/t Au

90% of mines had a recovered grade >8.5g/t Au

32Moz Au (P50 mid case) of undiscovered gold to the north in the **Northern Bendigo Zone** (Vic Govt 'Gold Undercover¹' estimate)

This area is under thin Murray Basin cover and is essentially unexplored – **the opportunity**

Historic region capturing global attention again thanks to Kirkland Lake Gold's **ultra high-grade Swan Zone discovery at the Fosterville Gold Mine²:**

2020 Production

**~640koz at
~34g/t Au**

2020 operating cash
costs guidance

**US\$130-
150/oz**

Swan Zone Mineral
Reserve (Dec-19)

**1.6Moz @
~39g/t Au**

Chalice has adopted a systematic value-add approach across its >5,000km² land holding – ‘find the big gold systems first’

- Project covers hundreds of kilometres of prospective strike, along crustal scale faults that host multiple tier-1 gold deposits
- Prior to Chalice most of the area essentially **un-drilled**
- Our **regional-scale** activities commenced in mid-2018, focussed on shallow (<100m) areas of cover:

Phase 1. Screen the thin cover (<100m) areas with wide-spaced recon sampling + AC drilling

Phase 2. Infill and vector towards targets with tier-1 scale potential

Phase 3. Drill-out prospects and revisit other targets

Several high-grade gold zones have been intersected on wide-spaced drill holes at the **Karri Prospect**, including 5.1m @ 14g/t Au

Pyramid Hill Gold Project Karri Prospect Plan View – AC and diamond drilling over 1VD Gravity July 2021

- ◆ Diamond hole collar
- ◆ New diamond drill intercept (Au)
- ◻ Previous diamond drill intercept (Au)
- Major anticline axis
- Granitoid
- AC drill contours (max Au)
 - >1.0g/t
 - >0.1g/t
 - >0.025g/t

Pyramid Hill Gold Project Karri Prospect 3D View – AC and diamond drilling July 2021

Three gold bearing diorite intrusions have been discovered at the **Ironbark Prospect**, prospective for high-grade Walhalla-Woods Point style deposits

Hawkstone Nickel- Copper-Cobalt Project

Western Australia

The Hawkstone Nickel-Copper-Cobalt Project covers ~1,600km² in the frontier and largely unexplored King Leopold Orogen of the west Kimberley

- Frontier province highly prospective for magmatic **Ni-Cu-Co sulphide** deposits
- **Minimal modern exploration**
- 2015 Merlin discovery by Buxton Resources (ASX: BUX) highlighted potential of Ruins Dolerite
- **IGO Ltd** (ASX: IGO) entered the region in late 2018 with a regional JV with Buxton
- Chalice a **significant** player in the belt:

Ruins Dolerite

- ~500km² Ruins Area acquired in June 2019
- Immediately SE of Merlin (proven host)

Hart Dolerite

- 1,100km² of EL applications made in late 2018
- Conceptual host to magmatic sulphides

Chalice's immediate focus is the Ruins Area, where **several nickel sulphide targets** have already been defined

- Merlin (IGO-Buxton) hosts drill intercepts in Ruins Dolerite with grades up to **8.14% Ni, 5.26% Cu and 0.69% Co¹**
- **11 airborne EM targets** defined by Chalice to date along strike to SE and E of Merlin
- Ground based MLEM completed, identifying several high-priority EM targets
- **2 x ~5,000 Siemens conductors** identified at the ~2.5km x ~1.5km Ephesus Target
- Maiden drill program at Ephesus in Sept-21

1. Buxton Resources Ltd (ASX:BUX) announcement 11 March 2019.
