ClearVue-Helios Achieves CEC Product Listing

ClearVue-Helios rooftop solar panels are now listed on the Clean Energy Council (CEC) Approved Products List qualifying the products for government incentives.

6th August 2026 - **Perth, Australia** – Smart building materials company **ClearVue Technologies Limited (ASX: CPV | OTCQX:CVUEF) (ClearVue or the Company)** is pleased to announce that its ClearVue-Helios rooftop solar has been added to the Clean Energy Council (CEC) approved products list for solar panels.

Listing on the CEC approved products list is a mark of independently verified quality. Every panel type on the list has passed testing against international design and safety standards, including IEC 61215 for performance and durability and IEC 61730 for electrical safety, alongside the CEC's own consumer protection requirements.

CEC listing matters because it is the benchmark the Australian solar market trusts. It tells specifiers, builders and asset owners that a panel has been independently tested and verified as safe, durable and fit for purpose. In a market with thousands of products, that independent stamp is one of the clearest signals of quality a panel can carry. More importantly no panel can be connected to the grid in Australia without this certification and all government renewable energy subsidies are contingent on CEC Listing.

ClearVue-Helios rooftop panels are an integrated, metal-backed rooftop solar system. The range delivers up to 220 W/ m² and up to 600 Watts per panel. The panels have a fully sealed mounting system that acts as a second roof for buildings. The panel carries a Class A fire rating, a 30-year performance warranty and a 15-year product warranty.

The listing positions ClearVue in the Australian rooftop and commercial solar market. It clears a procurement hurdle that customers, installers and specifiers routinely apply and again shows the ability for ClearVue's engineering to pass certification standards.

Chief Executive Officer & Managing Director Doug Hunt said:

"Achieving CEC listing for ClearVue-Helios is an important milestone for both our customers and our shareholders. It provides further independent verification that the product meets the quality and safety standards expected by the Australian market. We believe this strengthens the commercial opportunity for ClearVue-Helios and gives customers greater confidence when specifying our products. We also noted the government's announcement yesterday modifying the incentives for commercial solar installations in Australia. The changes mean that upfront incentives can now be applied to commercial installations of up to 1MW instead of the prior 100KW maximum. This will reduce the acquisition cost of commercial solar significantly, so the achievement of this certification is timely. Crucially these incentives will lower the acquisition cost of the whole range of ClearVue products for our customers further improving paybacks. "

Authorised by the Board of ClearVue Technologies Limited.

ABOUT CLEARVUE TECHNOLOGIES LIMITED

ClearVue Technologies Limited (ASX: CPV; OTCX: CVUEF) is an Australian technology company that integrates solar technology into building façade and rooftop surfaces to provide renewable energy generation and offset the operational carbon footprint of buildings. The Company's advanced, patented glass technology preserves glass transparency maintaining building aesthetics while generating energy.

ClearVue has extended solar energy-generation to vision glass, cladding, spandrel, balustrade, and skylight solutions. These solutions can offset operational energy requirements significantly contributing to the net zero building.

ClearVue's integrated solar façade is revolutionizing the way buildings are designed, constructed, and renovated. Experience how building façades will become a major contributing factor to reducing operational carbon by visiting ClearVue at www.clearvuepv.com.
