

PLANNED EXPLORATION ACTIVITIES EAROO AND BONNIE ROCK PROJECTS

Corella Resources Ltd (**ASX:CR9**) (**Corella** or the **Company**) advises that it has approved a Stage 1 reconnaissance exploration program to be undertaken at its Earoo and Bonnie Rock Projects in Western Australia (refer Figure 1).

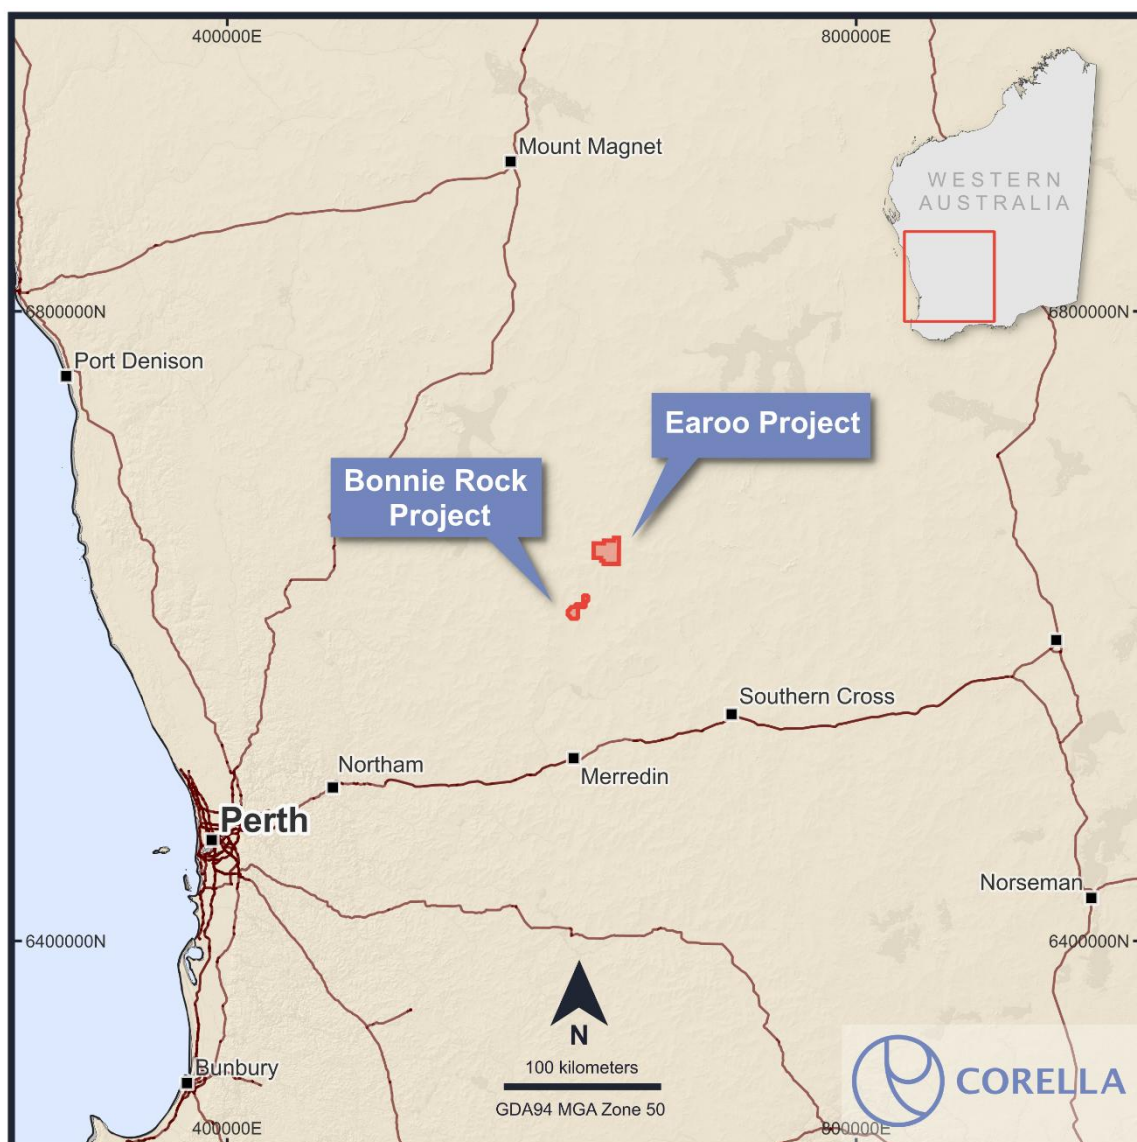

Figure 1: Bonnie Rock and Earoo project location map.

Bonnie Rock Project (E70/5665)

At Bonnie Rock, planned work will comprise detailed geological and structural mapping of known, outcropping quartz veins, together with systematic surface rock-chip sampling along strike and across vein widths.

Historical exploration by previous operators reported multiple thick hydrothermal quartz veins described as having high silica purity. These historical observations have not been verified by the Company. The proposed program is designed to verify the continuity, geometry and consistency of silica purity within these veins and to refine Areas of Interest for potential follow-up work.

Earoo Project (E70/6579)

At Earoo, the program will focus on reconnaissance geological mapping targeting lithology, structure and alteration, with particular emphasis on the Earoo Sill and previously reported anomalous zones.

Planned activities include field inspection of historical soil, rock-chip, gravity and electromagnetic anomalies, together with targeted confirmation rock-chip sampling. The work aims to improve geological understanding of the project area and to further assess vanadium–titanium–iron mineralisation associated with the Earoo Sill and related base-metal anomalies, as well as refining Areas of Interest for subsequent exploration phases.

Program Scope and Timing

The Stage 1 program includes pre-field data review and planning, approximately five days of field mapping and sampling, and post-field data compilation and reporting, including interpretation of geochemical results as they become available. Fieldwork is planned for Q1 2026, subject to land access and weather conditions.

Results from the program will be used to guide recommendations for any second-phase exploration, should further work be warranted.
