### Qualifying Statements

The information in this Report that relates to Exploration Information is based on information compiled by Michael Leu who is a member of The Australasian Institute of Mining and Metallurgy and the Australian Institute of Geoscientists.

Mr Leu is a qualified geologist and is a director of Sovereign Gold Company Limited.

Mr Leu has sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration and to the activity, which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Resources. Mr Leu consents to the inclusion in this announcement of the Exploration Information in the form and context in which it appears.

## Mt Adrah Drilling Underway

- **Deep Diamond Drilling on schedule**
- **Potential to identify several deep tapping pipe-like intrusives**
- **Geologically similar to Goonumbla Porphyry Copper Deposits that are being mined by Rio Tinto at Northparkes Mine**

Deep Diamond Drilling has commenced on schedule at the Hobbs Deposit Pipe 1 target.

The Hobbs Deposit Pipe 1 target is located on EL

Drilling is planned to a depth of 1,000 meters.

The objective of this hole is to provide a level of validation of the Conceptual Exploration Target – 65–90 million tonnes with a grade range 1.13–1.40 g/t gold to 1,000 metres.

The potential of the Hobbs Deposit Pipe 1 was determined by the evaluation of the existing morphology in three dimensions, the grade of the pipe based on known assays and a conceptual model understanding of the geology of similar meso-epizonal intrusion related gold deposits.

The Hobbs Deposit is geologically similar to Goonumbla – North Parkes Porphyry Copper-Gold Deposits - located approximately 250km north of the Hobbs Deposit – both occur in a similar geological setting and within structures associated with the regional Gilmore Suture.

The exploration target extending to 1,000m is made by consideration of the depth extent of similar mineralised systems such as North Parkes Porphyry Copper-Gold Deposits, Cadia in NSW associated with the regional Gilmore Suture.

### Exploration Targets:

The potential quantity and grade of exploration targets is conceptual in nature. There has been insufficient exploration to define a Mineral Resource (other than the 239k Inferred JORC resource previously declared, ASX: 13 March 2013) and it is uncertain if further exploration will result in the determination of a Mineral Resource.
