Palm Valley 12 Update

Central Petroleum Limited (“**Central**”) (**ASX: CTP**) advises that as at 0600 hrs ACST on 17 October 2022 the Palm Valley 12 (**PV12**) sidetrack (**ST2**) in OL3 was in the process of being completed as a gas producer after flowing gas on test at approximately 11.8 million standard cubic feet per day (mmscfd).

Prior to commencing completion operations, an indicative flow test through the rig was conducted for 187 minutes. The well reached stable flow after 5 minutes and flowed at approximately 11.8 mmscfd through a 1.33” orifice plate. The flowing tubing head pressure was 260 psi. Gas and small amounts of water / steam were recovered.

This interim flowrate is encouraging, with the gas rate being similar to that achieved by Palm Valley 13 during drilling in 2018. Well production rates will be determined once the well has been tied-in and flowing into the gathering network.

Palm Valley is an existing gas field that produces from natural fractures. The Pacoota-1 Sandstone is the productive interval, with gross and net pay thickness of 175 metres and 45 metres respectively. The gas composition has not been analysed, but is expected to be the same as current production from the P1 interval which contains around 98% hydrocarbons and minimal inerts.

This will be the last weekly update for this well given that drilling operations have been completed.

The PV12 ST2 well is being drilled under a joint venture between Central (50% interest), New Zealand Oil & Gas Limited (**ASX: NZO**) (35% interest) and Cue Energy Resources Limited (**ASX: CUE**) (15% interest).

This ASX announcement was approved and authorised for release by Leon Devaney, Managing Director and Chief Executive Officer.

About Central Petroleum

Central Petroleum Limited (Central) is an established ASX-listed Australian oil and gas producer (ASX: CTP) with exploration and appraisal permits in the Northern Territory (NT) and Queensland. Central has grown to become the largest onshore gas Operator in the NT, supplying residential and industrial customers in the NT and wider Australian east coast market.

Central is seeking to become a major domestic energy supplier, in addition to helium and naturally occurring hydrogen, with exploration, appraisal and development plans across 180,000 km² of tenements in Queensland and the NT, including some of Australia's largest known onshore conventional gas prospects in the Amadeus Basin and prospective CSG resources in the Surat Basin.
