

Agam Ground Electro Magnetic Survey

Coziron Resources Limited (**ASX: CZR**) is pleased to announce that a Ground Electro Magnetic Geophysical Survey Program for its Agam Iron Sand Project in Western Sumatra - Indonesia will commence soon.

COZIRON Resources has signed a contract with the local Indonesian Geophysics group "CV. BILLANDA UTAMA" to undertake the Ground Electro Magnetic Survey at the Company's two tenements in Western Sumatera.

The resistivity device agreed to be used is ARES G-4 the specification of this device are as follow:

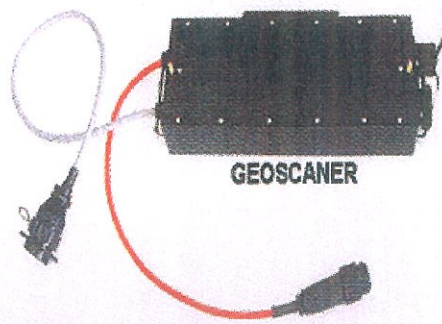

SPECIFICATION

Transmitter

Power up to 300 W
Current up to 2.0 A
Voltage 10 – 550 V (1100 Vp-p)
Protection full electronic protection
Precision 0.1%

Receiver

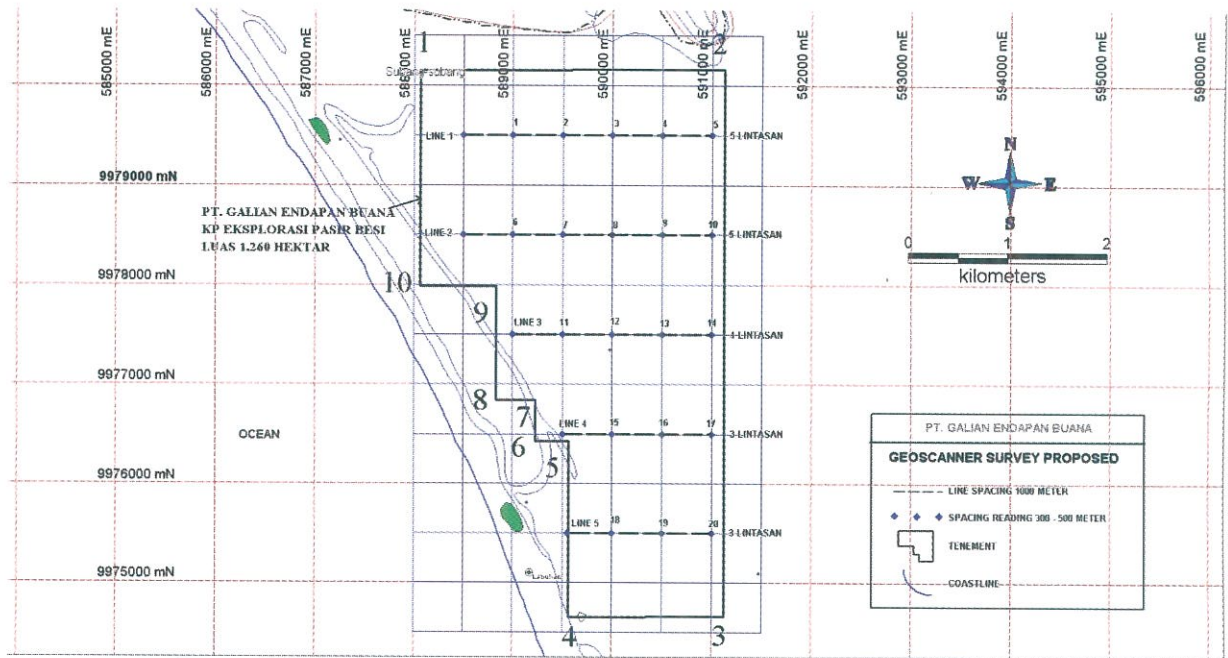

Input impedance 20 MΩ
Input voltage range ± 5 V
Mains frequency filtering 50 or 60 Hz
Precision 0.1%

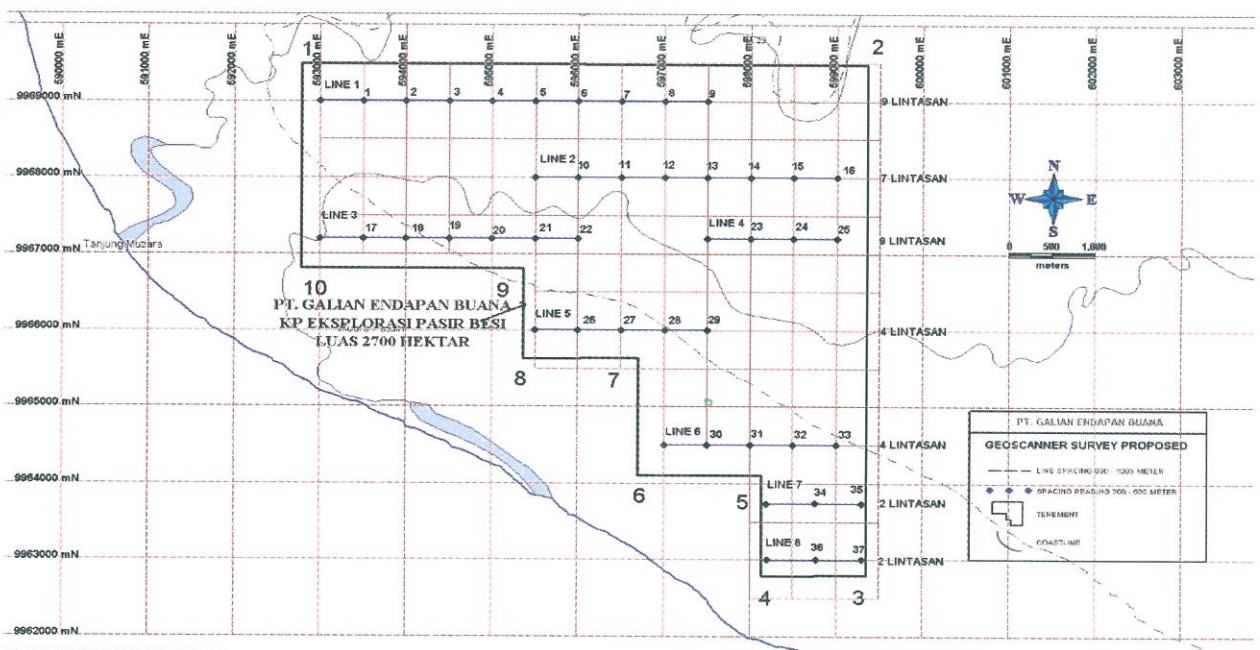

Measurement – features :

self-adapting control system,
automatic ranging and calibration
automatic checking of measured values
easy interruption of the measurement
(for the first view of measured structures)
capability of profile prolongation by means of
multi-electrode cable rolling

Agam Ground Electro Magnetic Survey designed to have a total of 13 lines at the two tenements, 5 lines at the northern tenement and 8 lines at the southern tenement. Detailed EM Survey lines are shown below:

Agam Tenement 1 proposed five lines of ground EM survey

Agam Tenement 2 proposed eight lines of ground EM survey

Coziron Resources Limited has appointed Mr. Bakr Khudeira as the Company's Consultant Geologist to supervise Agam's EM survey program and its subsequent drilling program.

The Company's Executive Director Mr. Lam Fatt Tan said: "Coziron is one step closer to mine the highly prospective Agam Iron Sand Project".

Based on the ground EM survey results a resource drilling program will be designed to fully comprehend the size of Agam Iron Sand mineralisation. This will prepare the company for the next phase of mining.
