

First approval for new body orientation intellectual property

Melbourne, Australia. 4 May 2017. dorsaVi Limited (ASX DVL) has today announced it has been issued with its first patent for its body orientation intellectual property.

The patent classification is described as a method for automatically detecting whether a person is standing, sitting, lying down or engaged in a dynamic activity. This new area of intellectual property strengthens dorsaVi's lead in accurately measuring movement and muscle activity. Understanding body orientation is an important component of assessing whether certain movements are associated with a high risk of causing an injury and is relevant for the clinical, the occupational health and safety and the sporting markets.

The first country to grant this patent is China. Patent applications covering this intellectual property are currently undergoing review in other geographies.

About dorsaVi

dorsaVi (ASX: DVL) is an ASX company focused on developing innovative motion analysis device technologies for use in elite sports, occupational health and safety and clinical applications. dorsaVi believes its wearable sensor technology enables – for the first time – many aspects of detailed human movement and position to be accurately captured, quantified, and assessed outside a biomechanics lab, in both real-time and real situations for up to 24 hours.

Our technology has applications across three sectors:

- **Clinical:** ViMove is transforming the management of patients by providing objective assessment, monitoring outside the clinic and immediate biofeedback. ViMove is currently used by medical and physiotherapy practices in Australia, the United Kingdom, and the United States.

- **Elite Sports:** ViPerform is allowing coaches and medical teams managing elite athletes and teams to screen athletes and provide objective evidence for decisions on return to play, measure biomechanics and provide immediate biofeedback out on the field, tailor and track training programs and optimise technique and peak performance. ViPerform is being used by AFL and NRL clubs, Cricket Australia, and the Australian Institute of Sport (AIS) in Australia. Barclays Premier League (EPL) clubs in the UK and US based sports clubs from the National Basketball Association (NBA), the Major Soccer League (MLS) and the National Football League (NFL) as well as various Olympic teams and athletes internationally.
- **OHS:** We combine innovation, measurement, and quality to reduce workplace incidents, costs, meet compliance and improve brand reputation. ViSafe enables employers to assess risk of injury for employees as well as test the effectiveness of proposed changes to workplace design, equipment or methods based on objective evidence. ViSafe has been used by major corporations including Sodexo, London Underground, Vinci Construction, Crown Resorts, Caterpillar (US), Monash Health, Coles, Woolworths, Toll, Toyota, Orora (formerly Amcor), Crown and BHP Billiton. Australian Workplace Compliance delivers risk mitigation through compliance to OHS, Quality Management Systems, Company Policy, and Process.
