ASX Company Announcement

24 April 2006

Harrington Files ShockRounds Patent Applications

Harrington Group (ASX:HGR) advises that its New York based Patent Attorneys, Schweitzer Cornman Gross & Bondell LLP, have filed individual Patent Applications in the following jurisdictions: China, EU, India, Indonesia and the USA.

The patent applications seek to protect the Company's rights to the use of Piezoelectric technology to produce electric charges in projectiles including less lethal munitions such as rubber bullets as well as in lethal ammunition.

The ShockRounds technology introduces an "electric" charge to traditional ammunition and other projectiles such as rubber bullets through the combination of existing ballistic and Piezoelectric technologies. The less lethal versions of ShockRounds are intended to minimize casualties and injuries when dealing with serious crowd disturbances and threat situations.
