AUVEX ENCOUNTERS HIGH GRADE MANGANESE IN RC DRILLING

- Confirmation of high grade strata bound manganese oxide.
- Best drill result 15m at 32.15% Mn including 7.0m at 47% Mn.
- Over 4km of manganese outcrop with rock chip assays up to 54% Mn.
- Over 4km of haematite iron outcrop with rock chip assays up to 67% Fe.

Montezuma is pleased to advise that we have received an exploration update from Auvex Resources Limited highlighting the intersection of high grade manganese in a first pass reconnaissance drill program at Auvex's 100% owned Horseshoe tenement located in the Gascoyne region of WA.

The program has successfully demonstrated the continuity of high grade manganese and iron outcrop over a respective 4km strike and limited drilling has intersected significant widths of high grade manganese under cover. Follow up work has commenced.

Two phases of exploration work have been carried out to date, including the completion of a rock chip sampling program along outcropping manganese lodes as well as a first pass RC drill program of 38 holes for 1254m.

Shareholders are encouraged to read the complete update from Auvex located at <http://www.auvex.com.au/page2/page2.html>
