

ENVIRONMENTAL CLEAN
TECHNOLOGIES LIMITED

Appointment of Non-Executive Director

Wednesday, 17 July 2013: Environmental Clean Technologies Limited (ASX: ESI) (ECT or Company) is pleased to announce the appointment of Mr. Glenn Fozard to the Board as a Non-Executive Director, effective from 17th July 2013.

Mr. Fozard brings to ECT a strong commercial background and extensive experience in the finance and capital markets at both the Board and executive management level.

Mr. Fozard has over 13 years experience in the finance sector holding various senior management and sales roles, including 5 years at Macquarie Bank's Securitised Lending division.

With in-depth experience in tailored financing solutions for SME's in the 'cleantech' and agricultural industries Mr. Fozard is the founding partner of Greenard Willing, a specialist financial advisory firm.

Mr. Fozard has held an advisory position with ECT for over 5 years and has contributed significantly towards the capital raising for the company during that time.

ECT Chairman Mike Davies commented, "Mr. Fozard brings a deep level of capital management experience, a broad understanding of technology development as well as risk management skills to the Board. We're very pleased to add his valuable skill-set to the Board as we advance our commercialisation strategy."

A graduate of Monash University, Mr. Fozard studied a double degree, majoring in International Trade and Psychology and holds an Australian Financial Services Licence (AFSL).

About ECT

ECT is in the business of commercialising leading-edge coal and iron making technologies, which are capable of delivering financial and environmental benefits.

We are focused on advancing a portfolio of technologies, which have significant market potential globally.

ECT's business plan is to pragmatically commercialise these technologies and secure sustainable, profitable income streams through licencing and other commercial mechanisms.

About Coldry

When applied to lignite and some sub-bituminous coals, the relatively simple Coldry beneficiation process produces a black coal equivalent (BCE) in the form of pellets. Coldry pellets have equal or superior energy value to many black coals and produce lower CO₂ emissions than raw lignite.

About MATMOR

The MATMOR process has the potential to revolutionise primary iron making.

MATMOR is a simple, low cost, low emission, production technology, utilising the patented MATMOR retort, which enables the use of cheaper feedstocks to produce primary iron.
