ECO-RESORT ADOPTS EGL PRESSURE SEWER TECHNOLOGY

The environmentally friendly credentials of EGL's pressure sewer technology have been further demonstrated by the adoption of the technology by a leading eco-tourism resort based in NSW.

The Myall Shores Ecotourism Resort at the Myall Lakes National Park features one of the State's largest coastal lake systems, which in turn has been recognized as a Ramsar Wetland of International Significance.

The installation of EGL's market-leading E/One pressure sewer system is part of a major refurbishment of the resort, which will feature 40 luxury waterfront villas, and a conference centre which have been specifically designed to take full advantage of the area's unique natural environment.

EGL's pressure sewer technology provides optimal protection for groundwater resources and features an installation protocol that dramatically reduces disruption to the natural environment when compared to traditional sewerage solutions.
