The Environmental Group Limited (EGL)
ASX Code: EGL

EGL subsidiary TAPC and Anguil team up for the Australian market.

Two leading suppliers in the air pollution control industry are partnering-up to meet the needs of Australian companies with emission control requirements. Australia's single-largest air pollution control company, Total Air Pollution Control Pty Ltd (TAPC) has teamed up with Anguil Environmental Systems, Inc. (Anguil), a global provider of oxidation and vapor combustion technologies.

Both Anguil and TAPC specialize in technologies, products and services that destroy Volatile Organic Compounds (VOCs) and Hazardous Air Pollutants (HAPs) from a broad range of applications. When released into the atmosphere these pollutants contribute to smog as well as the destruction of agriculture and forests. In humans they can cause birth defects, nervous system damage, respiratory ailments, heart conditions or even death during massive accidental releases.

TAPC's current product offering includes gas scrubbers, electrostatic precipitators and fabric filters. With access to the Anguil thermal and catalytic oxidiser technologies they can now offer a control technology increasingly being used in the region to meet the more stringent environmental regulations for VOCs and HAPs.

Anguil, founded in 1978, has gained its recognition and reputation as one of the leaders in manufacturing, servicing and installation of oxidation technologies and heat recovery systems for various applications and industries. TAPC will incorporate Anguil's oxidizer designs and heat recovery systems with their existing gas cleaning technologies for facilities throughout the region.

This partnership provides a local Anguil presence for sales, installation, fabrication and service needs. Customers in Australia can expect state of the art air pollution control equipment, dependable service and responsive support from two of the most reputable companies in the industry.

Mr. Ellis Richardson, Executive Chairman of EGL commented that the partnering was a further step in the development of TAPC and it's offering to the market. Mr. Richardson stated that, "The company continues to seek value adding relationships and technologies that assist clients address the increasing requirement by society for solutions to environmental problems.
