Via electronic lodgement

Dear Sir/Madam,

Please find the following announcement for immediate release to the market. This announcement is made on behalf of the Bigrlyi Joint Venture partners being Energy Metals Limited with 53.3%, Valhalla Uranium Limited (a subsidiary of Paladin Resources Limited) with 41.7% and Southern Cross Exploration NL with 5%.

Yours faithfully,

A handwritten signature in black ink, appearing to read 'Lindsay Dudgefield'.

LINDSAY DUDFIELD
Director.

ENCOURAGING START TO 2007 DRILLING PROGRAM AT BIGRLYI

Energy Metals is pleased to advise that drilling at its 53.3% owned Bigrlyi project has intersected significant extensions to the current uranium deposits, including intercepts of **9.25m @ 0.12% U_3O_8** and **4.15m @ 0.25% U_3O_8** at Anomaly 4.

The Bigrlyi project is located in the Northern Territory approximately 350km northwest of Alice Springs and is a joint venture with Paladin Resources' subsidiary Valhalla Uranium (41.7%) and Southern Cross Exploration (5%). The project was subject to significant exploration in the period 1974 to 1982 and is characterised by high uranium grades, accompanied by significant levels of vanadium. Metallurgical test work conducted to date has indicated recoveries of up to 98-99% of the uranium and up to 70% of the vanadium using acid leach and fine grinding.

Current resources at Bigrlyi (0.5 kg/t U₃O₈ cutoff) total

14.3 M lbs U₃O₈ and 16.3 M lbs V₂O₅

with most of the resources within 200m of the surface and potentially accessible via open pit mining. There is excellent potential to increase resources at depth and along strike at all of the current resource areas.

Early April 2007 the Bigrlyi Joint Venture partners approved a substantial drilling program (262 holes for 51,255m) for the 2007 field season, with drilling commencing late April 2007.

Downhole gamma probe (eU₃O₈) results have been received from the **first 18 holes** drilled as part of this program **with mineralisation intersected in all holes** (summarised below). It is emphasised that these results are preliminary and subject to confirmation by geochemical assay (uranium and vanadium). Furthermore several holes (RC) failed to reach the primary target and will be extended with diamond tails.

DEPOSIT	HOLE	FROM	INTERCEPT	TW (est)	eU ₃ O ₈ (%)	eU ₃ O ₈ (lb/t)

NB: Intervals marked with (*) denote that it is likely significant radiometric disequilibrium exists as the intercept is in the near surface environment. All preliminary radiometric assays will be checked against chemically derived assays prior to use in resource block model compilations.

Importantly it should be noted that 13 of the 18 holes were drilled outside of current resource envelopes, reinforcing the **potential for the current drilling program to lead to a significant increase in the resource base at Bigrlyi.**

Further downhole probe results will be released as they become available.

LINDSAY DUDFIELD
Executive Director.

Note: The information in this report relating to Exploration Results is based on information compiled by Lorry Hughes BSc, MAusIMM. The information in this report relating to mineral resources is based on information compiled by Lorry Hughes who has more than five years relevant experience in estimation of mineral resources and the mineral commodity uranium. Mr Hughes is a full time employee of Energy Metals Limited and takes responsibility for the quality of the data and geological interpretations.

Mr Hughes has sufficient experience relevant to the assessment of this style of mineralisation to qualify as a Competent Person as defined in the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves – The JORC Code". Mr Hughes consents to the inclusion of the information in the report in the form and context in which it appears.
