ASX Release

GRADE CONTROL DRILLING TO COMMENCE AT
PENNY'S FIND-GOLD PROJECT IN W.A.

Empire Resources Limited (ASX code: "ERL") advises that grade control drilling at the Penny's Find gold project located approximately 50 kilometres north east of Kalgoorlie in Western Australia, is scheduled to commence this week.

A total of 88 reverse circulation drill holes for approximately 2500 metres drilling is planned. Holes vary from 9 to 42 metres in length; averaging approximately 29 metres long.

This is the first of three grade control programmes scheduled in the planned 80 metre deep open pit.

This initial programme will define the position of the gold zone close to surface and increase the confidence in the early mining phase which scheduled to commence later this year. It is part of pre-development activities occurring prior to completion of project finance negotiations.
