

Company Announcement, July 31st, 2019

Greenland Minerals Secures \$7 Million Via a Placement to Institutional Investors

Highlights:

- **Heavily oversubscribed placement to Australian and Asian institutional investors**
 - **Strong support from existing shareholders**
 - **Funds to be utilised to progress ongoing technical development of the Kvanefjeld, complete project permitting and advance commercial development**
-

Greenland Minerals Limited (“GML” or “the Company”), 100% owner and operator of the Kvanefjeld Project in Greenland, is pleased to announce a strongly supported share Placement (the Placement) to Australian institutional investors to raise \$7.0 million (AUD) before costs.

The Kvanefjeld Project is underpinned by a JORC-code compliant resource of >1 billion tonnes, and an ore reserve estimate of 108 million tonnes to sustain an initial 37-year mine life. It is projected to be one of the largest global producers of key magnet metals including **neodymium, praseodymium, dysprosium** and **terbium**. Kvanefjeld offers a new, simpler path to rare earth production than traditional refractory sources. Kvanefjeld is one of a small number of advanced rare earth projects globally.

The successful capital raise follows the completion of a highly successful feasibility optimisation program that resulted in a 40% reduction in both the capital and operating cost estimates. These outcomes have Kvanefjeld positioned with the lowest capital intensity, lowest unit costs of production and longest mine life of emerging ASX-listed rare earth projects. Metallurgical optimisation was guided by leading rare earth company and GML’s major shareholder Shenghe Resources Holding Co Ltd.

Ashanti Capital acted as Lead Manager of the Placement.

Completion of Capital Raise

The Company received firm commitments for 58,333,333 shares, which will raise A\$7.0 million before costs. The placement was undertaken at an issue price of A\$0.12c per share, representing a 20% discount to the 20-day volume weighted average price of GML shares trading on the ASX up to 26th July 2019.

The placement was limited to institutional and sophisticated investors in accordance with Section 708 Corporations Act and shares will be issued within the Company's Listing Rule 7.1 capacity. The participation of numerous Australian and Asian funds is a strong endorsement of the Company's significant progress in advancing Kvanefjeld toward production and as the outlook for the rare earth sector continues to strengthen.

The completion of the placement will place the Company in a strong cash position. The funds will be utilised to:

- Further advance technical development of the Kvanefjeld project
- Progress the mining licence application through public consultation and impact benefit agreement negotiations
- Continued development of downstream processing and path to market strategy, and project commercialisation

-ENDS-

ABOUT GREENLAND MINERALS LTD.

Greenland Minerals Ltd (ASX: GGG) is an exploration and development company focused on developing high-quality mineral projects in Greenland. The Company's flagship project is the Kvanefjeld Rare Earth Project (rare earth elements, uranium, zinc). A pre-feasibility study was finalised in 2012, and a comprehensive feasibility study was completed in 2015 and updated following pilot plant operations in 2016. The studies highlight the potential to develop Kvanefjeld as a long-life, low cost, and large-scale producer of rare earth elements; key enablers to the electrification of transport systems.

GML is working closely with major shareholder and strategic partner Shenghe Resources Holding Co Ltd to develop Kvanefjeld as a cornerstone of future rare earth supply. An exploitation (mining) license application for the initial development strategy has been undergoing review by the Greenland Government through the latter part of 2016 and through 2017.

In 2017-18, GML continues to undertake technical work programs with Shenghe Resources Holding Co Ltd that aim to improve the metallurgical performance, simplify the development strategy and infrastructure footprint in Greenland, enhance the cost-structure, and ensure that Kvanefjeld is aligned with downstream processing. In addition, the Company continues its focus on working closely with Greenland's regulatory bodies on the processing of the mining license application and maintaining regular stakeholder updates.

Dr John Mair
Managing Director

Christian Olesen
Rostra Communication
+45 3336 0429

Greenland Minerals Ltd will continue to advance the Kvanefjeld project in a manner that is in accord with both Greenlandic Government and local community expectations and looks forward to being part of continued stakeholder discussions on the social and economic benefits associated with the development of the Kvanefjeld Project.

Competent Person Statement – Mineral Resources Ore Reserves and Metallurgy

The information in this report that relates to Mineral Resources is based on information compiled by Mr Robin Simpson, a Competent Person who is a Member of the Australian Institute of Geoscientists. Mr Simpson is employed by SRK Consulting (UK) Ltd ("SRK") and was engaged by Greenland Minerals Ltd on the basis of SRK's normal professional daily rates. SRK has no beneficial interest in the outcome of the technical assessment being capable of affecting its independence. Mr Simpson has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Robin Simpson consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in the statement that relates to the Ore Reserves Estimate is based on work completed or accepted by Mr Damien Krebs of Greenland Minerals Ltd and Mr Scott McEwing of SRK Consulting (Australasia) Pty Ltd. The information in this report that relates to metallurgy is based on information compiled by Damien Krebs.

Damien Krebs is a Member of The Australasian Institute of Mining and Metallurgy and has sufficient experience that is relevant to the type of metallurgy and scale of project under consideration, and to the activity he is undertaking, to qualify as Competent Persons in terms of The Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code, 2012 edition). The Competent Persons consent to the inclusion of such information in this report in the form and context in which it appears.

Scott McEwing is a Fellow and Chartered Professional of The Australasian Institute of Mining and Metallurgy and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration, and to the activity he is undertaking, to qualify as Competent Persons in terms of The Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code, 2012 edition). The Competent Persons consent to the inclusion of such information in this report in the form and context in which it appears.

The mineral resource estimate for the Kvanefjeld Project was updated and released in a Company Announcement on February 12th, 2015. The ore reserve estimate was released in a Company Announcement on June 3rd, 2015. There have been no material changes to the resource estimate, or ore reserve since the release of these announcements

¹There is greater coverage of assays for uranium than other elements owing to historic spectral assays. U₃O₈ has therefore been used to define the cutoff grades to maximise the confidence in the resource calculations.

²Total Rare Earth Oxide (TREO) refers to the rare earth elements in the lanthanide series plus yttrium.

Note: Figures quoted may not sum due to rounding.
