Dear Sir/Madam

**Charlestown Square Tri-generation Project wins Best Commercial Building Energy Efficient Project**

TSF Engineering's Charlestown Square Tri-generation Project has won the Energy Efficiency Council's 2012 award for Best Commercial Building Energy Efficiency Project at its Gala Dinner in Sydney on 5 December 2012. Charlestown is located near Newcastle in New South Wales and is the Hunter Valley's largest regional centre.

Rob Murray-Leach, Chief Executive Officer of EEC, stated the Charlestown Square project was a standout in the category.

The project is the first time that a cogeneration plant has been synchronized via high voltage interface to the mains grid in New South Wales. Recently completed by TSF Engineering, the Charlestown Square Tri-generation Plant is one of the most efficient of its type in Australia and is currently the largest high voltage grid connected system in New South Wales.

*"This is a fantastic achievement for the team at TSF Engineering and a firm step along the path to EVZ becoming the leader in delivering distributed clean energy solutions for our customers"* commented Scott Farthing, Chief Executive Officer of EVZ.

*"This award is recognition of the people working in our business and the experience they bring to any tri- or co-generation project"* noted Andrew Green, TSF Engineering General Manager.

The project commenced in April 2009 and involved designing and installing a solution comprising MWM 1400kW gas fired generators, Broad 1000kWt absorption chillers, two waste heat recovery units; sundry equipment plus the High Voltage Electrical installation including centre main high voltage switchboard.

EVZ Limited through its operating division TSF Engineering is strategically positioned to deliver clean energy solutions to industry through either turnkey or asset ownership DBOOM structures.

### **About the Energy Efficiency Council Industry Awards**

The Energy Efficiency Council held its inaugural awards to recognise and celebrate excellence in energy efficiency and co-generation. The awards seek to recognise excellence in energy efficiency and co-generation. Judges consider the projects performance and innovation.

### **About TSF Engineering**

TSF are leaders in the design and construction of clean energy solutions incorporating heating and cooling and, for almost 50 years, have satisfied the energy installation needs of its customers across Australia and the Pacific region.

### **About EVZ Limited**

EVZ is an emerging industrial group with a portfolio of specialist businesses operating in the engineering services industry. The company's operations currently encompass the following businesses:

- TSF Engineering
- Brockman Engineering
- Syfon Systems
- Distributed Clean Energy Systems
- Industrial Tanks and Piping
- Roof Water Management Technology

These businesses have strong positions in their respective markets with exceptional growth opportunities.
