Announcements

Australian Stock Exchange Limited
Level 4, 20 Bridge Street
SYDNEY NSW 2000

Dear Sir/Ms,

RE : UPDATE EAGLE NORTH-1 DRILLING SAN JOAQUIN BASIN, CALIFORNIA, USA

Sun Resources NL ("Sun Resources") wishes to advise shareholders that Victoria Petroleum NL, Operator for the Eagle Oil Pool Development Project in the San Joaquin Basin, California, has advised Sun Resources that Eagle North #1 at 1800 hours Wednesday, 8th February California time (0900 hours Australian WST Thursday 9th February) was currently at 3,696 metres (~12,125 feet) depth in new 9⁷/₈" sidetrack hole drilling ahead to reach target at 4,145 metres (~13,600 feet) and total depth at 4,206 metres (13,800 feet) at end of the week.

Eagle North #1 is an up dip appraisal well on the Eagle Oil Pool stratigraphic trap which was discovered in 1986 by the Mary Bellocchi #1 well which targeted a small structural culmination on the then unrecognized extensive stratigraphic trap. The indicated potential recoverable reserves for the Eagle Oil Pool ranges from a mean of 13.5 million barrels of oil with 25 billion cubic feet of gas to the P₁₀ case of 34 million barrels of oil with 58 billion cubic feet of gas.

The Mary Bellocchi #1 well tested the target Eocene Gatchell Formation at rates of up to 223 barrels of oil per day and 0.7 million cubic feet per day, a production rate considered un-economic at the then prevailing oil price of US \$11 per barrel and a gas price of US\$ 2 per thousand cubic feet. Current high oil and gas prices (in excess of US \$60 per barrel of oil and US\$8-9 per mcf for gas) now makes the project an attractive development target. This attractiveness is further increased by the acquired knowledge that the reservoir can be developed and produced by insitu horizontal wells of 300 to 900 meters reach which results in 4 to 6 fold flow rates for oil and gas over a conventional vertical well such as Mary Bellocchi #1. In 2001, Sun Resources participated in the Eagle #1 horizontal well via a reentry of the Mary Bellocchi #1 well which was successfully drilled into and along the Gatchell Sandstone oil reservoir. However, mechanical difficulties encountered near surface with the well curtailed its completion and a test of the indicated 90 metres of horizontally drilled good oil pay. This particular problem should not occur with Eagle North #1.

The Eagle North #1 appraisal well will be vertically drilled to a total depth of 4,206 metres. After logging and coring and confirmation of the presence of oil in the target Gatchell Sandstone the well will be cased and production tested for five days. Following a successful test the well will then be plugged back to drill a side track horizontal lateral within the reservoir for a distance of 300 metres which will then be completed for testing and ultimately long term oil and gas production. The latter operations will run for a similar duration of time as per the vertical well and testing.

Economic completion of the well triggers an immediate 129 km² 3D seismic survey for planning of a further nine 900 metre long insitu horizontal wells in the reservoir to drain the field over a 15 year production period as well as instituting permitting of production facilities for Eagle North #1. With respect to production it is proposed to truck crude to receiving facilities at Coalinga some 20 kilometers to the west and link gas production to gas pipelines that are nearby to the Eagle Oil Pool location.

Participants' interests in the Eagle Oil Pool Development Project on completion of Eagle North #1 are:

# Sun Resources NL	10.0%
# Victoria Petroleum NL (Operator)	20.0%
# First Australian Resources Ltd	15.0%
# Lakes Oil NL	15.0%
Empyrean Energy PLC	38.5%
USA Private Interest	<u>1.5%</u>
	100.00%

ASX listed

Yours sincerely
SUN RESOURCES NL

Dr Brad L Farrell
MANAGING DIRECTOR
