

SEPTEMBER 2023 QUARTERLY REPORT

The Board of Fin Resources Limited (ASX: FIN) (Fin or the Company) is pleased to provide its Quarterly Activities Report for the period ending 30 September 2023, along with the Appendix 5B for the same period.

Cancet West Lithium Project

During the September Quarter fieldwork by Fin's in country geological consultant, Mercator Geological Services began across the Cancet West Lithium Project.

Post the end of the September 23 Quarter Fin announced Fin's maiden fieldwork programme has **identified abundant spodumene crystals** (see **Figure 2**) within a broad pegmatite outcrop **Cancet West Project**¹.

At least 5 pegmatite bodies were identified outcropping across the western and eastern blocks of Cancet West with approximate total strike lengths of each outcrop ranging from 200 to 400 meters. These pegmatite bodies may extend for significant distances, along strike and below surface.

Large, up to 30cm long green spodumene crystals, trace lepidolite, coarse muscovite, tourmaline, blue-green beryl, coarse red garnets and megacrystic feldspars were mapped within one of the pegmatite outcrops. Lichen cover over a number of the outcrops made it difficult to identify some minerals, textures and megacryst grain sizes. However, all outcrops were mapped as hosting megacrystic feldspar crystals over 15 cm in length and pockets of coarse quartz zones.

Fin has now begun a follow up fieldwork programme at Cancet West² and staked an additional 56 claims³ following the new Large Crystal Spodumene discovery at Cancet West (57% increase in project area) – total Cancet West landholding now 79km². The follow up programme is planned to include further detailed field mapping and channel sampling followed by preparations and planning for drilling. In conjunction with the fieldwork a high-resolution aeromagnetic/radiometric survey and a LIDAR are in the process of being planned.

The discovery of outcropping pegmatite hosting large confirmed spodumene crystals has accelerated the priority of this follow up fieldwork programme, in the hope of delineating further drill ready targets for a proposed winter drilling programme.

Works Programme

Near-term works programme for the three project areas to include;

- Additional in-depth field mapping.
- Bedrock channel sampling.
- Rock chip and soil sampling.
- Remote sensing and geophysics as required, with interpretation in conjunction with the historic datasets and satellite imagery to highlight areas for ground-proofing and sampling during the upcoming summer season.
- Preparations and planning for drilling are underway.

McKenzie Springs Project

During the quarter, FIN continued to evaluate conducting a gridded soils program over the Springs Creek intrusive complex and has locked in a field team from Anytime Exploration Services (AES) to complete surface sampling on the Project. The gridded soils programme will be designed to identify new drill targets for nickel, copper, graphite and other base/precious metals. A field trip to Mackenzie Springs by Fin's Technical Adviser Tom Ridges and geological consultant Gary Powell is planned during the December Quarter.

In addition to the site visit, Core Geophysics have been contracted to re-assess the historical geophysical survey data that has been generated across the Project, generate plate models for any anomalies of interest and complete 3D inversion of magnetic data from VTEM survey and compile into 3D project.

Sol Mar Project

During the quarter, FIN continues to assess its future options for the Sol Mar project including third party funding , sale or continuing discussions with the holders of land rights, potential green power suppliers, counterparties for the development of a multiuser port at West Coolgra Point and potential offtake customers.
