

26 November 2025

## HIGH GRADE SURFACE SAMPLES FROM NEW NEVADA LITHIUM PROJECT

- **201 claims covering 17km<sup>2</sup> in Lander County, Nevada, staked.**
- **High-grade lithium claystone surface samples up to 1,219ppm lithium.**
- **Basin contains numerous geological characteristics associated with the presence of lithium-rich claystones.**
- **Drilling in Q1 2026 to test subsurface geology extension of high-grade surface samples.**

The Directors of Fulcrum Lithium Ltd (ASX: FUL, **Fulcrum** or **the Company**) are pleased to announce the introduction of the Dry Canyon lithium claystone exploration project in Lander County, Nevada, USA (Figure 1).

The Dry Canyon project comprises 201 unpatented load claims on Federal public land which have been staked by the Company and, within 90 days of staking, filed with the USA Bureau of Land Management (**BLM**). The load claims (Figure 2) give Fulcrum the right to access and conduct mineral exploration and mining under the guidelines and rules set forth in General Mining Act of 1872, and include rights to all locatable surface minerals. The Company has paid the Maintenance Fees for the year ending 31 August 2026.

To support the desktop geological targeting, Fulcrum geologists have conducted a geological sampling program which has confirmed the presence of high-grade lithium claystones and supportive geology at the project. A total of 62 samples were collected for assaying, with 31 samples returning assay results above 300ppm lithium and 6 samples above 1,000ppm lithium.

Basin geology includes the presence of an abundance of volcanic source rocks with 2 major calderas flanking the project as well as a closed sedimentary and hydrologic basin, tuffaceous lacustrine sediments and basin and range extensional tectonic subsidence.

An exploration program, including a drilling program will be run in parallel with Fulcrum's Alkali Flats discovery appraisal program.

Scott Keenan, COO, commented:

*"Dry Canyon is a very exciting prospect that has emerged from Fulcrum's new business geological screening process completed earlier this year. The presence of high-grade lithium claystones at surface as well as strongly supporting basin geology has driven us to secure this opportunity through staking a significant claims position over the basin. We look forward to completing a targeted, accelerated exploration program including a maiden drilling program in 1H 2026."*

*Crucial exploration and operational knowledge from our successful Alkali Flats exploration strategy is already being applied to Dry Canyon to ensure an impactful exploration program."*

## Dry Canyon Project (100% owned)

The Dry Canyon project comprises 201 unpatented lode claims, an area of 17 km<sup>2</sup>, located in Lander County, Nevada, USA approximately 75km south of Battle Mountain, a major mining services hub.

## **About Fulcrum Lithium Ltd**

Fulcrum Lithium Ltd (ASX: FUL) listed on the ASX on 22 November 2024, is a lithium exploration company focused in Nevada, the leading lithium mining and exploration state in the USA.

Fulcrum's Alkali Flats discovery is proximate to, and on trend with, significant lithium projects at various stages of exploration and development in a geologic setting with demonstrated success and a mining friendly jurisdiction.

This announcement has been authorised for release by the Company Secretary.

## **Competent Person's Statement**

The information in this Report that relates to Exploration Results is based on, and fairly represents, information and supporting documentation prepared by Mr Bill R. Fleshman of Global Geological Services, LLC, a geologist who is a Fellow and Chartered Professional of the Australasian Institute of Mining and Metallurgy and (FAusIMM CP Geology #107342) and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activities which are being undertaken to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Fleshman is an independent consulting geologist and consents to the inclusion of the Exploration Results and Exploration Targets and supporting information in the form and context in which it appears.

## JORC Code, 2012 Edition – Table 1

### Section 1 Sampling Techniques and Data – Dry Canyon

| Criteria                                              | JORC Code explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Commentary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sampling techniques</b>                            | <p><i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i></p> <p><i>Aspects of the determination of mineralisation that are Material to the Public Report.</i></p> <p><i>In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i></p> | <p>Samples collected to date are surface rock samples collected from exposures in arroyos or small drainages where natural erosion exposed outcrops or along road cuts or using shallow auger drilling.</p> <p>Samples were collected and recorded with the dimensions of the length of the sample and depth of the sample below the surface. Samples were all documented with photographs of the sample site. GPS coordinates in NAD 83 Zone 11 Datum were recorded at each site by the geologist.</p> |
| <b>Drilling techniques</b>                            | <p><i>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Not applicable for surface sample reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Drill sample recovery</b>                          | <p><i>Method of recording and assessing core and chip sample recoveries and results assessed.</i></p> <p><i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i></p> <p><i>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Not applicable for surface sample reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Logging</b>                                        | <p><i>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i></p> <p><i>Whether logging is qualitative or quantitative in nature.</i></p> <p><i>Core (or costean, channel, etc) photography.</i></p> <p><i>The total length and percentage of the relevant intersections logged.</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Not applicable for surface sample reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Sub-sampling techniques and sample preparation</b> | <p><i>If core, whether cut or sawn and whether quarter, half or all core taken.</i></p> <p><i>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</i></p> <p><i>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</i></p> <p><i>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</i></p> <p><i>Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.</i></p> <p><i>Whether sample sizes are appropriate to the grain size of the material being sampled.</i></p>                                                                                                                                                                                                                                                                                                                                                      | Not applicable for surface sample reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

The project area was selected based on the presence of favourable host lithologies within a hydrogeological closed basin that also exhibited high geothermal activity. The Dry Canyon project is geologically similar to other Nevada lithium projects with advanced exploration programs and based primarily on the United States Geological Survey (USGS) lithium depositional model as presented by Asher-Bolinder (1991) in which three diagenetic models are proposed for formation of enriched lithium clays in closed basins:</p> <p>Alteration of volcanic glass to lithium-rich smectite.</p> <p>Precipitation from lacustrine waters.</p> <p>Incorporation of lithium into existing smectites.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |          |        |         |          |        |          |         |      |          |         |     |          |         |      |          |         |     |        |         |      |          |         |     |          |         |      |          |         |     |        |         |      |        |         |     |        |         |      |        |         |     |        |         |     |          |         |     |          |         |     |          |         |     |          |         |     |          |         |     |          |         |     |        |         |     |          |         |     |          |         |     |          |         |     |          |         |     |          |         |     |          |         |     |        |         |     |          |         |     |          |         |     |        |         |     |          |         |     |          |         |     |          |         |     |        |         |     |        |         |     |          |         |     |          |         |     |          |         |     |          |         |     |        |         |    |        |         |     |          |         |    |          |         |     |          |         |    |          |         |     |          |         |    |          |         |     |        |         |    |          |         |     |          |         |    |        |         |     |        |         |    |          |         |     |        |         |    |        |         |     |        |         |    |          |         |     |        |         |    |          |         |     |        |         |    |        |         |     |        |         |    |
| <b>Drill hole Information</b>                  | <p><i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i></p> <p><i>easting and northing of the drill hole collar</i><br/><i>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</i><br/><i>dip and azimuth of the hole</i><br/><i>down hole length and interception depth</i><br/><i>hole length.</i></p> <p><i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i></p> | <p>Sample coordinates below, otherwise, not applicable for surface sample reporting.</p> <table><thead><tr><th>Easting</th><th>Northing</th><th>Li ppm</th><th>Easting</th><th>Northing</th><th>Li | Criteria                                                                | JORC Code explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Commentary                                                                                                       |
|-------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
| <b>Data aggregation methods</b>                                         | <i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually material and should be stated. Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. The assumptions used for any reporting of metal equivalent values should be clearly stated.</i> | Not applicable for surface sample reporting.                                                                     |
| <b>Relationship between mineralisation widths and intercept lengths</b> | <i>These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</i>                                                                                                                                                                             | Not applicable for surface sample reporting.                                                                     |
| <b>Diagrams</b>                                                         | <i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i>                                                                                                                                                                                                                                                                                      | Appropriate diagrams are included in the ASX announcement.                                                       |
| <b>Balanced reporting</b>                                               | <i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</i>                                                                                                                                                                                                                                                                                                                               | All new surface samples have been represented in diagrams.                                                       |
| <b>Other substantive exploration data</b>                               | <i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i>                                                                                                                                                                   | No other material exploration data was gathered in this period.                                                  |
| <b>Further work</b>                                                     | <i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i>                                                                                                                                                                                                                  | A maiden drilling program for Dry Canyon is planned to commence in Q1 2026 as described in the ASX announcement. |
