Sydney

Dear Sir,

RUBY MINE OCTOBER PRODUCTION

During the four weeks to the 28th of October, 3,213 tonnes of gravels sourced from Area 11 (Upper Terrace deposits) were processed through the plant at the Ruby Mine. Of the production, approximately 60,405 carats were of usable quality: 26,347 carats of facet quality ruby at a grade of 8.2 carats per tonne, 13,816 carats of facet quality sapphire (mainly blue, green and yellow in colour) at a grade of 4.3 carats per tonne, and 20,242 carats of cabochon quality ruby at a grade of 6.3 carats per tonne. In total, this represented a grade of 18.8 carats per tonne of usable ruby and sapphire.

In early November, the Ruby Mine work crew were engaged on improving our environmental protection systems, which we are maintaining to a high standard. These works took a week to complete, and November's production figures will be affected as a result.
