Dear Madam,

CULLERIN PROJECT JOINT VENTURE (EL6292)
TRI ORIGIN MINERALS LTD & GOLDEN CROSS RESOURCES LTD

Tri Origin Minerals Ltd (Tri Origin) is pleased to announce that it has entered into a Memorandum of Understanding for the Cullerin Project Joint Venture whereby it may earn a 51% interest in EL 6292 from Golden Cross Resources Ltd. Tri Origin is required to expend a minimum of $50,000 within the first year and $200,000 within a four year period to earn its interest. A joint venture agreement will be formalised over the coming month.

The project area has demonstrated potential for VMS type deposits, intrusive related porphyry deposits and associated skarns. Drilling by previous explorers within the joint venture area has identified several high priority prospects where follow up drilling will be undertaken to verify many reported, potentially ore grade intercepts. Numerous other targets also require systematic follow up.

This joint venture is a significant achievement for Tri Origin in that it now controls a major zinc province within the Lachlan Fold Belt of New South Wales and is able to take a long term view in its exploration strategy. Upon earning its interest the Company would control approximately 50 kilometres strike length of the Woodlawn Volcanics or equivalent Silurian age rocks that are highly prospective for zinc and associated base and precious metals.

Tri Origin views this zinc province as highly undervalued from an exploration viewpoint and will take a longer term view of the region with an initial focus on re-establishing operations at Woodlawn.

The Cullerin Project Joint Venture area is north of the Woodlawn mine site and contiguous with Tri Origin's other tenement interests and the recently applied for

Cullerin South project. Together this area forms the northern part of Tri Origin's Woodlawn District tenement position (Figure 1).

The Cullerin Project Joint Venture may through exploration success provide the Company the opportunity to establish a standalone operation or the potential to truck ore for processing should it re-establish an operation at Woodlawn.

In accordance with the Australian Stock Exchange Limited Listing Rules Appendix 5A, the information in this report that relates to Exploration Results is based on information compiled by Mr David Hobby, a consultant geologist of Hardwon Resources, who is a Member of The Australasian Institute of Mining and Metallurgy.

Mr Hobby has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activities which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Hobby consents to the inclusion in the report of the matters in the form and context in which they appear based on information derived from his technical work.

For further information contact Bruce Robertson on (02) 9221 4322.

Yours faithfully,

Bruce Robertson
Managing Director
