

ASX Announcement: 20 November 2019

GIDGEE GOLD PROJECT – DRILLING UPDATE

Reverse Circulation drilling program expanded to 10,000m following excellent progress and productivity achieved to date

Gateway Mining Limited (ASX: GML) (**Gateway** or **Company**) is pleased to provide an update on the ongoing Reverse Circulation (RC) drilling program at its 100%-owned Gidgee Gold Project in Western Australia (Figure 1).

The drilling performance achieved to date has been excellent and is ahead of the original schedule. Accordingly, the Company has decided to extend the program until the end of November, which will result in a total of 11,000m for 94 holes being drilled compared to the original 8,000m program.

On completion of the RC drilling, the planned air-core drilling program will commence and will continue through to the end of the exploration field season (mid-December).

The aim of the RC drilling is to target immediate extensions to the Whistler and Montague Gold Deposits, as well as undertake first-pass drill testing of a series of high-priority targets along the granodiorite contact. In addition to this, the air-core drilling is designed to commence systematic testing of large strike extensions of the prospective granodiorite contact that have never previously been tested.

Initial samples from the program have been submitted to the laboratory for assay and results will be reported as they come to hand.
