Quarterly Report

For the Quarter ended 31 March 2017

Highlights

- New prefeasibility study (PFS) underway targeting 10Mtpa Hawsons Supergrade® concentrate production; PFS delivery expected during the current quarter with preliminary mining studies, so far in line with expectations
- Iron ore market continues to segment based on quality with pricing favouring of higher quality products; Platts 65%Fe price double the 58%Fe price
- Successful drilling programme swells the JORC* Indicated Resource for Hawsons Iron Project by 3.6 times, contributing 119 million tonnes (Mt) to a total resource of over 330mt of contained concentrate at 69.7%Fe
- Conversion from Inferred to Indicated Resources an outstanding 96%, confirming Hawsons' continuity of mineralisation and boosting confidence in previously stated mining and processing assumptions
- Average deposit and concentrate grades unchanged, reconfirming that Hawsons is capable of producing Hawsons Supergrade® concentrate, the highest grade iron product on seaborne market
- Total resource provides potential for decades-long mining operation
- An additional 4,866,668 ordinary shares were placed during the quarter by way of allocation of shortfall under the Company's entitlements issue completed in the previous quarter, raising approximately \$292,000 before costs

March Quarter

Hawsons Iron Project

Carpentaria Exploration Limited (ASX:CAP) during the March quarter 2017 announced a significantly upgraded resource for its flagship Hawsons Iron Project located just 60 kilometres south-west of Broken Hill after successful infill drilling completed in late 2016.

The resource upgrade is set to form part of a new prefeasibility study for Hawsons, scheduled for completion in the current quarter. Early PFS results have been encouraging with preliminary mining studies in line with expectations. The PFS is being undertaken independently by engineering company GHD.

Resource drilling comprised 5,963m in 20 reverse circulation (RC) holes (Figure 3). The drilling targets were chosen to upgrade significant portions of the resource from JORC Inferred Resource to JORC Indicated Resource.

The Indicated Resource has increased by 3.6 times to consist of 119mt of contained concentrate, providing the foundation for a new PFS. Indicated Resources represent higher level of confidence than Inferred Resources and are required to be the dominant resource in the early mine plan of any prefeasibility study under the JORC code.

The total resource provides the potential for a decades-long mining operation near Broken Hill, generating valuable jobs and investment for Australia's most famous mining centre.

Importantly, the drilling results and the new resource estimate have also increased confidence in the previously stated potential for low-cost mining and processing methods at Hawsons, which also has the advantage of favourable access to existing rail, port and power infrastructure along with a skilled mining workforce at Broken Hill and the unique Hawsons Supergrade[®] product.

The iron ore market shows continued segmentation based on quality and pricing shifts are increasingly favouring higher quality products. On April 20th, the Platts 65%Fe fines price was more than double the Platts 58%Fe fines price, (US\$77.75/t vs US\$36.75/t) continuing a trend seen since early 2016. The 65%Fe price averaged 1.9 times the 58%Fe price over the March quarter and this equated to an average US\$46/t differential.

Understanding the market segmentation is important to understanding the opportunity Hawsons Iron Project provides to end users as a potential low cost producer of highest grade products. Hawsons Supergrade[®], at >70%Fe and excellent physical properties, represents a unique and desirable product that is expected to attract a price well in excess of even the 65%Fe fines price.

2017 Resource Estimate

The Indicated Resource at Hawsons has increased to 810 million tonnes (Mt) at 14.6% Davis Tube Recovery (DTR) magnetite mass recovery for 119Mt of concentrate at 69.9% Fe (iron), an increase of nearly 3.6 times over the previous 227mt at 16% DTR mass recovery for 36mt, both at a 10% DTR cut-off (see note below).

The total resource at Hawsons has increased by 6% to 2.4 billion tonnes at 14.1% DTR mass recovery for 336Mt of concentrate at a 10%DTR cut-off grade over the March 2014 estimate (ASX Announcement 26 March 2014).

The grade of the resource has increased to 15.2% DTR from 14.9% DTR when described at 12% DTR cut-off grade (refer grade tonnage curve) but is otherwise unchanged after an approximately 40% increase in drilling data. This indicates stability in the metallurgical characteristics of the resource, because the DTR is a metallurgical test and therefore additional confidence in the representative nature of the test work done to date to produce Hawsons Supergrade[®] product at 70.3% Fe (refer ASX announcements dated 16 Feb 2016 and 14 October 2015).

The resource dimensions are ~3km long x 1km wide x 400m deep with a relatively small amount of internal waste. This provides large mining widths and lengths and very low strip ratios that in turn allows for best use of less selective bulk mining methods such as in pit conveying and potential for lower costs (Figure 1). The deposit shows also shows a high degree of continuity and relatively simple geometry, which also contributes to lower mining costs (Figure 2).

Importantly the distribution of the Indicated Resource is such that it can be targeted early in the mine plan to support a prefeasibility study.

*The Hawsons resource estimate has previously been reported (March 26, 2014) at a 12%DTR cut-off grade. However, using a 10% DTR cut off aligns the reporting with the cut-off grade used in earlier mining studies. DTR- Davis Tube Recovery, the standard test to determine recoverable concentrate using magnetic separation

The resource estimate was completed by independent geologists, H&S Consultants Pty Ltd (Table 1).

Category	Mt	DTR %	DTR Mt	Fe Head %	Concentrate Grades						
					Fe %	Al2O3 %	P %	S %	SiO2 %	TiO2 %	LOI %
Indicated	810	14.6	119	17.5	69.9	0.19	0.004	0.002	2.61	0.03	-3.04
Inferred	1,570	13.9	217	16.8	69.6	0.20	0.004	0.003	2.94	0.03	-3.04
Total	2,380	14.1	336	17.1	69.7	0.20	0.004	0.002	2.83	0.03	-3.04

Table 1 – Hawsons Iron Project 2017 Resource Estimate , H&S Consultants

The Company confirms that it is not aware of any new data that materially affects this resource statement since the first public announcement and that all material assumptions and technical parameters underpinning the resource estimates continue to apply and have not materially changed since first reported.

Corporate

Carpentaria during the quarter announced that, in accordance with the prospectus dated 14 September 2016, it has placed 4,866,668 fully paid ordinary shares to sophisticated investors at a price of \$0.06 per share. The funds raised (\$292,000 before costs) will be used for the purposes of the prefeasibility study and other activities in respect of the Hawsons Iron Project and for working capital.

Other

Cape Clear (Lachlan) Pty Ltd advised that it had spent \$200,000 and has therefore earned 80% of the Barellan (EL7896) and Combaning (EL6901) projects. Carpentaria continues to seek divestment of its remaining non-ferrous projects.

About Hawsons Iron Project

The Hawsons Iron Project joint venture (Carpentaria 64%, Pure Metals P/L 36%) is currently undertaking development studies based on the low cost, long term supply of a high grade, ultra-low impurity iron concentrate to a growing premium iron market, including the direct reduction (DR) market.

The project has a clear technical and permitting pathway. It is located 60km south-west of Broken Hill, an ideal position for mining operations with existing power, rail and port infrastructure available for a conceptual 10 Mtpa start-up operation. A mining lease application has been lodged.

The project's soft rock is different from traditional hard rock magnetite and allows a very different approach to the typical magnetite mining and processing challenges (both technical and cost-related). The soft rock enables simple liberation of a product of rare quality without complex and expensive processing methods.

The Company is targeting the growing premium high-grade product market, both pellets and pellet feed, which is separate to the bulk fines and believes its targeted cost structure is very profitable at consensus long-term price forecasts for this sector. It has secured offtake intent from blue chip companies Bahrain Steel, Emirates Steel, Formosa Plastics, Mitsubishi Corporation RtM Japan and trading house Gunvor Group.

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
