HYTERRA

A WORLD OF OPPORTUNITY

Important information

This presentation and these materials (together the “Presentation”) have been prepared by HyTerra Ltd (ABN 68 116 829 675) (ASX: HYT, HyTerra or the Company) as a summary of HyTerra’s operations and results for the purposes of a presentation to existing or potential investors in ASX: HYT. By participating in this Presentation or reviewing or retaining these materials, you acknowledge and represent that you have read, understood and accepted the terms of this Important Notice and Disclaimer.

This Presentation should be read in conjunction with periodic and continuous disclosure announcements and the prospectus dated 14 September 2022 (as supplemented by the supplementary prospectus dated 5 October 2022) (together, the Prospectus) that have been lodged by HyTerra with the ASIC and ASX.

This Presentation may contain forward looking statements concerning projected costs, approval timelines, construction timelines, earnings, revenue, growth, outlook or other matters (“Projections”). Any such Projections are based on assumptions which may differ materially from the actual circumstances which may arise and actual results may vary materially from Projections. You should not place undue reliance on any Projections, which are based only on current expectations and the information available to HyTerra. The expectations reflected in such Projections are currently considered by HyTerra to be reasonable, but they may be affected by a range of variables that could cause actual results or trends to differ materially, including but not limited to: price and currency fluctuations, the ability to obtain reliable hydrogen supply, the ability to locate markets for hydrogen, fluctuations in renewable energy and hydrogen prices, project site latent conditions, approvals and cost estimates, development progress, operating results, legislative, fiscal and regulatory developments, and economic and financial markets conditions, including availability of financing.

HyTerra undertakes no obligation to update any Projections for events or circumstances that occur subsequent to the date of this Presentation or to keep current any of the information provided, except to the extent required by law.

This Presentation is not a disclosure document, is for information purposes only, should not be used as the basis for making investment decisions or other decisions in relation to HyTerra or its securities, and does not constitute an offer to issue, or arrange to issue, securities or other financial products. This Presentation has been prepared without taking into account the investment objectives, financial situation or particular needs of any particular person. You should consult your own advisors as to legal, tax, financial and related matters and conduct your own investigations, enquiries and analysis concerning any transaction or investment or other decision in relation to HyTerra.

This Presentation, including opinions set out in it, is based on information compiled or prepared by HyTerra from sources believed to be reliable, although such information has not been verified in all instances. HyTerra has no obligation to tell recipients if it becomes aware of any inaccuracy in or omission from the information in this Presentation.

No representation or warranty, express or implied, is made as to the fairness, accuracy, completeness or correctness of the information, opinions or conclusions contained in this Presentation. To the maximum extent permitted by law, none of HyTerra, its directors, employees, advisors or agents, nor any other person, accepts any liability, including without limitation any liability arising out of fault or negligence, for any loss arising from the use of the information contained in this Presentation. In particular, no representation or warranty, express or implied, is given as to the accuracy, completeness, likelihood of achievement or reasonableness of any forecasts, Projections or prospects referred to in this Presentation.

No distribution in United States or other jurisdictions outside Australia.

This Presentation does not constitute an offer or recommendation to purchase or sell any securities in any jurisdiction, nor an invitation to apply for such securities in any jurisdiction and will not form part of any contract for the acquisition of securities in HyTerra. This Presentation does not constitute an offer to sell, or a solicitation of an offer to buy, securities in the United States. Any securities described in this Presentation have not been, and will not be, registered under the US Securities Act of 1933, as amended (“Securities Act”) or the securities laws of any state or other jurisdiction of the United States and may not be offered or sold in the United States except in transactions exempt from, or not subject to, registration under the Securities Act and applicable US state securities laws. This Presentation may not be released to US wire services or distributed in the United States.

The distribution of this Presentation in other jurisdictions outside Australia may also be restricted by law and any such restrictions should be observed. Any failure to comply with such restrictions may constitute a violation of applicable securities laws. By accepting this Presentation you represent and warrant that you are entitled to receive such Presentation in accordance with applicable laws.

Non-IFRS Financial Information

This Presentation may use non-IFRS financial information. Non-IFRS measures have not been subject to audit or review. Certain of these measures may not be comparable to similarly titled measures of other companies and should not be construed as an alternative to other financial measures determined in accordance with Australian accounting standards.

Competent Person Statement Information

The resources estimate information and supporting documentation referred to in this announcement was reviewed by HyTerra’s Chief Technical Officer and Executive Director, Mr Avon McIntyre, who is a full-time employee of the Company. Mr McIntyre is a qualified oil and gas geologist with over 20 years of international experience. He has extensive experience of oil and gas exploration, appraisal, strategy development and reserve/resource estimation. Mr McIntyre has a BSc, MSc and PhD in geology from The University of Waikato, New Zealand and is a member of The Society of Petroleum Engineers (SPE). Mr McIntyre is qualified in accordance with the ASX Listing Rules and has consented to the form and context in which this statement appears.

Important Risk Commentary

It is important to note that there remains both geological and potential development risks with these projects and the Company’s commercial and business objectives. This is an emerging frontier with the potential to unlock significant low-carbon hydrogen gas supplies but with equally significant risk and uncertainty. Key risks include the presence, concentrations, recovery, and commercial potential of both hydrogen and helium gases. For more information on risks please refer to the ASX release ‘Entitlement Issue Prospectus’ on April 8th, 2024: <https://wcsecure.weblink.com.au/pdf/HYT/02793318.pdf>.

Our purpose

To deliver the world's
cheapest, cleanest,
and most profitable
hydrogen.

How we will get there.

- 01 Deliver a comprehensive exploration program.
- 02 Secure key partnerships and customers.
- 03 Demonstrate a commercial project.

April 2025. Maiden drilling at the
Nemaha Project, Kansas.

Key investment highlights

01

Leading the way in the #1 global H₂ hotspot.

Early drilling results demonstrate the presence of a working hydrogen and helium system nearby industrial and agricultural hubs.

02

Clear strategy to explore and appraise resource potential.

Multiple wells in multiple plays to methodically de-risk commercial viability. Data driven approach. Drill all wells, analyse, then test.

03

Leveraging existing hydrogen and helium value chains.

Clear monetisation plan that can be quickly implemented with existing technology for both hydrogen and helium.

04

Well funded to deliver within a supportive jurisdiction.

Strategic alliance and funding by Fortescue to progress the Nemaha Project and explore new opportunities.

05

Our team has a long track record in oil, gas, and mining.

Experienced leadership and technical team with a global track record in resource exploration and development, and production.

April 2025. Drilling the Sue Duroche 3 well in Kansas

Firstly, what is geologic hydrogen?

Geologic hydrogen is hydrogen gas that exists naturally within the Earth's crust, unlike hydrogen produced through industrial processes like steam methane reforming (grey hydrogen) or electrolysis using renewable energy (green hydrogen).

- Geologic hydrogen is cleaner, greener, and cheaper to produce than man-made hydrogen.
- It requires minimal processing and may be recovered from underground reservoirs using conventional oil and gas techniques.

*Geologic hydrogen has a carbon intensity of 0.37 kg CO₂e per kilogram of hydrogen when including the embodied emissions of the well casing and hydrogen emissions, according to a published paper in Joule by Stanford's Dr. Adam Brandt.

Modified from <https://koloma.com/geologic-hydrogen/>. Values obtained from 2022 GREET Model. Carbon intensity of hydrogen production for natural hydrogen was calculated based on Brandt, A. Greenhouse Gas Intensity of Geologic Hydrogen Produced from Subsurface Deposits. 2023. EarthArXiv preprint. <https://doi.org/10.31223/X5HM1N>". Calculation maintained consistency with GREET methodology.

<https://gh2.org/our-initiatives/gh2-green-hydrogen-standard#:~:text=Green%20hydrogen%20is%20hydrogen%20produced,a%2012%2Dmonth%20period>

Grey Hydrogen

Made from natural gas.
H₂ separated from CH₄.

Carbon emissions not captured.

○ 9.0kg CO₂e per kg H₂[#]

White (Geologic) Hydrogen

Naturally occurring, found in underground deposits.

Cheapest hydrogen to produce.

○ <1.0kg CO₂e per kg H₂^{*}

Blue Hydrogen

Made from natural gas.
H₂ separated from CH₄.

Carbon emissions captured.

○ 3.0kg CO₂e per kg H₂[#]

Green Hydrogen

Made by using renewable energy to electrolyse water.
H₂ separated from H₂O.

Production is expensive.

○ <1.0 kg CO₂e per kg H₂[#]

Hydrogen has many current uses and some exciting new ones.

Today, hydrogen is used for oil refining and the production of fertiliser, ammonia and food.

- Tomorrow, it will be a low-carbon fuel option for transportation and manufacturing and used to store and generate electricity.
- The demand for hydrogen reached an estimated 87 million tonnes (Mt) in 2020 and is expected to grow to as much as 580 Mt by 2050¹.

¹Source: <https://www.mckinsey.com/industries/oil-and-gas/our-insights/global-energy-perspective-2023-hydrogen-outlook>

Current uses of hydrogen

Emerging uses of hydrogen

Leading the way in the #1 global H₂ hotspot.

- HyTerra's 100% owned and operated leases cover over 80,000 acres above the hydrogen-generating Mid-Continental Rift system.
- Flagship Nemaha Project (Kansas) well sampling results show high concentrations of hydrogen up to 96% and helium up to 5%¹.
- Geneva Project (Nebraska) well testing results show hydrogen concentrations up to 44% and helium up to 13%².
- Leases are surrounded by important ammonia/fertilizer and helium production plants in the United States.
- Kansas imports anhydrous ammonia from other U.S. states but is the USA's largest helium producer.

Early drilling results demonstrate the presence of a working hydrogen and helium system.

Background: USGS Geologic Hydrogen Prospectivity Maps 2025: Combined Source³

² Refer ASX release dated 31st March 2025 Project Geneva – Hoarty NE3 well testing results

Clear strategy to explore and appraise resource potential.

Multiple wells in multiple plays to methodically de-risk commercial viability.

Data driven approach.

- Secure priority acreage defined by inhouse geological model.
- Drill multiple exploration wells across multiple plays.
- Collect key data to define hydrogen and helium zones and potential for reservoir deliverability.
- Convert encouraging exploration wells into appraisal via work-over rig re-entry.
- Clean well up and install downhole monitoring equipment on appraisal wells to inform the design of an initial testing program.
- Conduct initial testing after all wells are drilled and subsurface data analysis is integrated.

Drill all wells, analyse, then test.

Leveraging existing hydrogen and helium value chains.

Clear monetisation plan that can be quickly implemented with common technology.

Continuous Work Program.

Strong news flow ahead with continued exploration drilling and accelerated appraisal.

Nemaha funded by \$22 million investment by Fortescue.

Fortescue acquired a 40% strategic stake in HYT for approximately A\$22 million in December 2024¹.

- Funding supports a 12-month exploration program, including continued leasing, advanced geophysical surveys and additional exploration wells.
- Fortescue and HyTerra entered into a Strategic Alliance Agreement to progress the Nemaha Project and mutually explore new opportunities globally.

¹ Refer ASX release dated 6 December 2024 *Fortescue acquires a strategic interest in HyTerra*

Our world-class team has a long track record in oil, gas, and mining.

Russell Brimage
Non-Executive Chairman

Over 40 years' experience in the upstream oil and gas industry, ranging from public listed oil and gas companies to the service industry – both onshore and offshore. Served in the capacity of Operations Manager and CEO on several ASX listed entities since 1997.

Benjamin Mee
Executive Director

Over 20 years' experience in international oil and gas with a successful track record in project delivery from exploration, through to appraisal, development and production both onshore and offshore in various global locations. Most recently, held the title of Exploration Manager Deepwater Africa for Shell, during which time significant petroleum discoveries were made.

Dr. Avon McIntyre
Executive Director & CTO

More than 20 years' experience in minerals and oil and gas exploration industries, with roles in government, service and operating companies. Worked for Shell in Australia and internationally in new ventures and new energies from 2008 to 2021, during which time he developed an interest in natural hydrogen and helium occurrences.

Christine Nicolau
Non-Executive Director

Served Australian major Fortescue since 2010. As Group Manager of Corporate Portfolio Management, her responsibilities include driving governance, management and administration of Fortescue's interests via directorships across various company internal and external strategic growth subsidiaries. Previously coordinated Fortescue's minerals business in Latin America as Metals General Manager LATAM.

Dr. Josh Whitcombe
VP Development and Operations

Extensive experience in early-stage exploration and appraisal projects across conventional and unconventional oil and gas and geological hydrogen. Previously COO for Gold Hydrogen. Commenced his career with Shell International and has experience in several overseas jurisdictions along with Australia.

APPENDICES

- A. Geologic Hydrogen model
- B. Geneva Project Hydrogen and Helium
- C. Nemaha Project Hydrogen
- D. Nemaha Project Helium
- E. Prospective hydrogen and helium resources

Geologic hydrogen is produced in a chemical process called iron oxidation – also known as “rusting”.

- Water from the Rocky Mountains seeps underground and flows eastward. The water reacts with the sub-surface, iron-rich rocks, producing iron oxide and the reaction generates hydrogen molecules which migrate upwards into various traps along the Nemaha Ridge.

Geneva Project Hoarty NE3 gas samples.

Samples taken from the well head shows helium up to 12.8% and hydrogen up to 44%¹.

- HyTerra has a 16% interest (and the right to earn up to 51%) in a Joint Development Agreement with Natural Hydrogen Energy LLC (NH2E).
- Wildcat well drilled to 11,200ft (3,400m) by specifically targeting geologic hydrogen (Hoarty NE3) in Geneva, Nebraska.
- Isotube® gas samples were taken from the well head by NH2E and analysed by Isotech Laboratories in Illinois from both the 2022 swabbing and 2023 electric submersible pump (ESP) well testing programs
- Given samples were taken at the well head, geological formations, rock types, and/or depths from which each of these gas samples are derived from is unknown.
- Flow potential of this well cannot be fully determined with current data.

¹ Refer ASX release dated 31st March 2025 *Project Geneva – Hoarty NE3 well testing results*

Nemaha Project returned hydrogen concentrations up to 96% in the Sue Duroche 3 well¹.

Laboratory results of mud gas samples validate the historical occurrences of up to 92% hydrogen measured in historic Sue Duroche 2 well (2009)².

- These concentrations of hydrogen are amongst the highest ever reported in the USA³.
- The Sue Duroche 3 exploration well was immediately converted into a long-term surface pressure and gas monitoring well via a work-over rig.

¹ Refer ASX release dated 22 May 2025 *Sue Duroche 3 finds both Hydrogen and Helium*.

² Guelard J, Beaumont V, Guyot F, Pillot D, Jezequel D, Ader M, et al. Natural H₂ in Kansas: deep or shallow origin? *Geochim Geophys Geosyst* G3 2017; 18; Coveney, R. M. J., E. D. Goebel, E. J. Zeller, G. A. M. Dreschhoff, and E. E. Angino (1987), Serpentinization and origin of hydrogen gas in Kansas, *Am. Assoc. Pet. Geol. Bull.*, 71(1), 39–48. H₂ + He + N% reflects occurrences of published gas analyses recovered from the wellbore. Uncertainty remains on historic well operations, sampling techniques, and analyses. The values are considered up to a % of H₂ or He.

May 2025.
Sue Duroche-3 well being drilled

Our Nemaha wells returned helium concentrations 10x the economic threshold of 0.3%.

2025 Nemaha wells returned helium concentrations of 5%¹.

- The economic threshold for a helium-rich field in the USA is 0.3% for primary production².
- Helium is an irreplaceable input for many important technologies, with significant demand from manufacturers of semi-conductors to MRIs.
- Liquid helium sells at up to 50 times the price of LNG. Current prices are US\$450/thousand standard cubic feet.

¹ Refer ASX release dated 22 May 2025 Sue Duroche 3 finds both Hydrogen and Helium

² <https://www.sciencedirect.com/science/article/pii/S0009254122000845>

Our unrisked prospective hydrogen and helium resources are based on less than 20% of our acreage.

Aggregated Net Recoverable Prospective Hydrogen Volumes (bcf) [#]			Aggregated Net Recoverable Prospective Helium Volumes (bcf) [#]		
P90	P50	P10	P90	P50	P10
49.0	105.5	251.7	0.05	0.59	2.04

#Cautionary Statement: The estimated quantities of natural hydrogen and helium that may potentially be recovered by the application of a future development project(s) relate to undiscovered accumulations. These estimates have both an associated risk of discovery and a risk of development. Further exploration, appraisal, and evaluation is required to determine the existence of a significant quantity of potentially recoverable natural hydrogen and helium. The Prospective Resource estimates are quoted on an unrisked basis and are aggregated arithmetically by category. Please refer to the ASX release dated 13 December 2023 and June 30th Quarterly Activities report for full details with respect to the Prospective Resource estimate, associated risking and Cautionary Statement.
