InteliCare signs first ACT distribution partnership with TADACT

- **Intelicare expands into ACT through beachhead agreement with Technology for Ageing and Disability ACT Inc. (TADACT)**
- **TADACT has well established client base and is only organisation of its kind in the ACT**
- **Further strengthens eastern seaboard exposure**
- **Leverages competitive advantage by scaling indirect sales channels**

InteliCare Holdings Ltd (“InteliCare” or the “Company”) (ASX: ICR), an Australian technology company that has commercialised a subscription-based Internet of Things (IoT) and Artificial Intelligence (AI) product for use in the aged care and health industries, is pleased to announce it has executed an Agency Agreement (“Agreement”) with Technology for Ageing and Disability ACT Inc. (“TADACT”).

Under the commercial terms of the Agreement, TADACT will act as an agent for InteliCare and receive a commission for products sold, including InteliLiving and InteliCare Pro. The Agreement is for an initial term of 12 months and there are no binding sales targets or exclusivity.

Both companies have commenced working together on immediately identified initial opportunities.

TADACT is a not-for-profit organisation that has been designing and making customised assistive equipment for children and adults with disabilities, and older people with special needs, for more than 40 years. The organisation provides this equipment for hospitals, schools, therapy providers and individual clients. They have a team of 60 volunteers and four staff who serve almost 400 families per year in Canberra and the region. It is the only organisation of its kind in the ACT.

The Agreement is a beachhead for InteliCare into the ACT with an established and well-credentialed partner, who brings an existing client base. It sits alongside the recently reported growing distribution network on the eastern seaboard. This and other similar agreements demonstrate InteliCare’s competitive advantage in owning its own technology. This advantage gives greater freedom of movement and commercial levers to scale through expanding B2B2C indirect sales channels nationally and, in time, internationally. The Agreement will commence immediately and there are no material condition precedents to commencement.

Jason Waller, CEO and Managing Director IntelliCare commented:

"TADACT is a great fit for IntelliCare because they had their genesis in both designing and supplying assistive equipment. They have a customised approach and know their clients needs deeply. Hence, having a new technology offering is a great complement to what they already do best."

Julie Lobel, Executive Director TADACT commented:

"The IntelliLiving home monitoring system is unmatched in the market. It is an Australian product that enables our clients to remain in their own homes and assists with the early prevention of emergencies for at-risk people living independently. We believe every person has the right to live the best life possible. Positive ageing – maintaining a positive attitude, feeling good about yourself, keeping fit and healthy, and engaging fully in life – for our clients is important to us. That is why TADACT is thrilled to partner with Intelicare."

What is IntelliLiving?

IntelliLiving enables seniors and people with disability to live at home independently. It uses smart home sensors (not cameras) to gather information about activity in the home. The sophisticated system sends daily messages about conditions and activity within the home by learning an individual's daily routine. If all is okay, members of the care team (family, carers, or health care professionals) get a daily message letting them know. Conversely, if the system detects movements are out of the AI generated daily routine, an alert is sent to the care team on their smartphone or other device.

What is IntelliCare Pro?

IntelliCare Pro is a larger-scale SaaS offering for care providers (such as aged care facilities, home care providers or hospitals). It integrates the IntelliLiving output with a dashboard system enabling many residents to be monitored at the same time. This enables commercial care providers to triage services to achieve higher quality care to those who need it most, reduce travel and staff costs, and maintain an audit trail when responding to issues. It also assists commercial carers to comply with the Australian Government's Aged Care Quality Standards.

This means declines in physical and mental wellbeing can be detected through advanced analytics insights before emergencies happen. It allows the care team to focus on prevention, not just respond after the event.

Aged and Disability Care organisations can quickly identify issues and prioritise care to reduce the risk of an emergency. In this way, their clients and families feel safer, more confident and happier knowing that their service is supporting them and delivering the highest level of care.
