Wilco announces new IRESS Adapter in Australia

Wilco International, a subsidiary of Automatic Data Processing, Inc. (NYSE: ADP), has announced its new IRESS Adapter which provides two-way connectivity between the IRESS Order System (IOS) and Australian client broking systems.

Wilco has also commenced the marketing of its IRESS Adapter on a stand-alone basis in addition to marketing it as a module of Wilco's Australian transaction processing system, SUMMIT.

The adapter, which handles the IRESS Order System trade reporting, allocation (booking) and ETC contract messages, provides a host-to-host connection between IOS and the client broking system.

"We have now finished our development for the IRESS adapter. It has been fully tested and is due to be delivered to our first client this month," said Simon Walch, General Manager, Wilco Australia.
