MEDIA RELEASE

PROGNOSIS IP Telephony Manager tops analyst firm's competitive solution report

Yankee Group puts PROGNOSIS on the VoIP management podium

Sydney – 1 February 2006 – Integrated Research's PROGNOSIS precise performance monitoring software has been recognised as the most integrated and comprehensive "whole-of-life" VoIP management solution. Respected industry analyst firm Yankee Group has placed PROGNOSIS as the top ranked product in their *VoIP Management Solutions Guide* released earlier this month.

According to author George Hamilton when reviewing strengths, "PROGNOSIS has been involved in IP telephony from the earliest days and has progressed to manage many of the largest Cisco IP Communication deployments across the globe. The principal strengths of PROGNOSIS are in the breadth and depth of coverage across the Cisco IPT solution, the ability to provide TDM-equivalent performance management by monitoring calls and call performance in real time and the flexibility and scalability of its solution."

The Yankee Group *VoIP Management Solutions Guide* provides the definitive in-depth comparison of leading vendor solutions. The Guide not only determines the most suitable solutions for each type of deployment, it provides the only direct comparison between those solutions.

The report goes on to say, "PROGNOSIS distinguishes itself from others that typically focus on particular components of IP telephony management. As more organizations adopt larger scale deployments, the ability for PROGNOSIS to manage highly distributed or very large environments (often exceeding 10,000 phones) will position the company as leading vendor for a variety of deployment sizes."

The most compelling recommendation for PROGNOSIS appears in the Guide's conclusions and recommendations where George Hamilton states, "The shortlist for any enterprise should include PROGNOSIS."

About PROGNOSIS for IP Telephony

PROGNOSIS for IP Telephony is a comprehensive suite of IP telephony lifecycle management software products spanning Voice over IP (VoIP) network-readiness assessment, pre-deployment assurance testing, and ongoing performance management for Cisco IP Communications environments.

PROGNOSIS has been involved in IP telephony from the start, and now manages more than 150 of the world's largest IP telephony implementations for customers such as CarrAmerica, Internetwork Experts, Abercrombie and Fitch, Infostream, Warner Pacific, NASDAQ, Global Data Systems, and NCR.

About Integrated Research Ltd

Integrated Research – the people behind PROGNOSIS - is a publicly listed company with a 17-year heritage of providing precise performance monitoring solutions for business-critical computing and IP telephony environments.

The company services customers in more than 50 countries through direct sales offices in the USA, Europe, and Australia, and via a global channel-driven distribution network.

Customers include the world's largest bank, telecommunications company, stock exchange, computer hardware manufacturer and Internet service provider.
