ASX ANNOUNCEMENT

6 September 2012

JATENERGY STRENGTHENS MANAGEMENT TEAM WITH APPOINTMENT OF TECHNOLOGY CONSULTANT

The board of Jatenergy is pleased to announce the appointment of Dr Tam Tran to its management team as a Process Technology Engineer. The appointment of Dr Tran expands Jatenergy's available skill resources, in line with the company's revised strategy based on licensing the Coal Plus technology.

As one of the world's foremost experts on minerals processing and waste recovery, Dr Tran has a thorough technical understanding of the Coal Plus process. His main role will be to assist Jatenergy in assessing the feasibility of using Coal Plus at potential project sites. He can also advise on the suitability of further value-add processes that can be applied to Coal Plus products, such as the refining of pyrolytic oil into diesel fuel.

About Dr Tran

Dr Tam Tran is one of the world's foremost experts in minerals processing and waste recovery. He is currently leading a team developing commercial projects based on R&D outcomes at Chonnam National University (CNU), and has been involved in the establishment of the Centre for International Resources Development (CIRD) at CNU. This group has developed several patented processes for minerals recovery for batteries and other high tech applications, one of which is being commercialised by Dong Bu Metals, the largest iron alloy producer in Korea. The CIRD is also currently evaluating a range of minerals projects, including coal (Indonesia), titanium (Myanmar and Vietnam), lithium (Bolivia, Vietnam and Korea) and bauxite/alumina (Indonesia, Vietnam) on behalf of KORES, LG International, Samsung Engineering/Minerals and other resource companies in Korea.

Dr Tran holds a doctorate in Chemical Engineering from the University of New South Wales (UNSW) and worked there for 21 years, attaining the position of Professor in Chemical Engineering. He left UNSW in 2007 to pursue his own business consultancy in Korea and Vietnam, advising several companies such as LG International, Korea Alumina and Korea Resources developing projects on key

energy materials for next generation lithium ion batteries and electric engines.

Dr Tran has extensive experience in commercial process development and holds several process patents and patent applications for minerals processing. He has worked with several major mining companies and government agencies on minerals processing, including BHP Billiton, Lachlan Resources, Imperial Mining and May Day Mines. He currently consults for Korea Resources Corp, LG International, Korea Alumina and Samsung Engineering, evaluating a range of mineral resources. During his career he has consulted on numerous minerals projects and has published over 120 papers.

Dr Tran has previously provided consulting services to Jatenergy, helping the company evaluate its jatropa operations in Vietnam.

Share Purchase Plan closing tomorrow

Jatenergy would like to remind its shareholders that its Share Purchase Plan is closing tomorrow, Friday 7 September 2012.

About Jatenergy

Jatenergy Limited is a Sydney-based diversified energy company operating in both Australia and Asia.

Jatenergy's principal focus is the implementation of the proprietary Coal Plus technology for upgrading low grade coal into high value energy products. The company is also a coal producer, mining and selling coal from two projects in Indonesia's Kalimantan coal region, and owns rights over additional coal assets in Indonesia and Queensland.

In addition to coal, the other main focus of Jatenergy is the production of high quality crude jatropa oil from plantation operations in Central Java, Indonesia, for power production and the airline industry.
